>I have struggled with this in the past
>It is a function of the behaviour of the servo loop at low freq and I
>dont have the theory to analyse it properly.

The "theory" part should be evident to anyone who has made
a negative-feedback amplifier, single transistor to op-amp.
Getting to know op-amp responses both open-loop and closed-
loop (with negative feedback) can be helpful. Note that
op-amp designers actually build in open-loop phase shifts
at high frequencies to avoid oscillation with feedback.

The only difficult part is in MEASURING the PHASE at low
frequencies in the 0.1 to 10 Hz range...especially that of
the AGC control-line (feedback) circuitry. If not, some
dog-work on analyzing the magnitude and phase response of
that circuit will show that. [ability to handle complex
quantities is preferred there]

If the phase response is 0/360 degrees between AGC control-
line input and output (to the gain-controlled stages), AND
the closed-loop gain of the system is greater than unity,
there be troubles there! :-(

To get a view into AGC behavior with any general receiver,
disconnect the AGC control-line from the gain-controlled
stage and substitute a small variable DC source for the
AGC control-line input to that gain-controlled stage.
Using a reasonably-well-calibrated RF source, pick some
RF levels over the expected dynamic range of receiver input.
At each input level, adjust the DC control-line substitute
to be the same as the value of the disconnected AGC control-
line. Measure the DC value of both the input and output of
that AGC control-line circuitry.

The reason for doing that is to remove any phase effects
at low frequencies. That's a baseline value set that
SIMULATES the closed-loop control range of the AGC.

With enough RF input signal levels, the characteristic curve
of the closed-loop AGC action at DC can be seen...from no
AGC (maximum receiver gain) to high values of AGC control
(essentially minimum receiver gain). That will show the
delta of tiny AGC-control line variations which is the

equivalent of the "feedback percentage" of a negative-feedback amplifier simple formula.

Alternately, one can do an open-loop gain measurement using a series of AGC control-line value increments from minimum to estimated maximum. Setting the simple DC supply (substitute for the AGC control-line) to those increments will do it nicely. Log the RF input level for those DC increments and measure the input to the AGC control-line feedback circuitry (even though it is disconnected from the controlled stages). That will result in the same input signal characteristic curve.

Either way will result in "seeing" what the RF input signal characteristics are, allow one to use the AGC line for things like an S-Meter indicating circuit, squelch control, etc. Note: The alternate method can also be done analytically on paper if the controlled stages' gain v. control line is known. A "gain budget" can be tabulated of the total receiver sensitivity to various RF input levels that produce various AGC control-line values.

That takes part of an afternoon's bench data logging, dreary though that may be. It will establish THE characteristics of that receiver, valuable reference for later work on it. That curve will be no different than that of a single amplifier stage with varying amounts of negative feedback.

Next is to either measure or calculate the low-frequency magnitude and phase characteristics of the AGC control-line circuitry (ALL of it, even to bypass caps at the controlled stage input connection). Magnitude alone will yield the feedback percentage of the equivalent negative-feedback amplifier. The phase response at various low frequencies has to be compared to the "attack" and "decay" times as desired. THAT is not intuitive but must be examined to see if the low-frequency AGC control characteristics will result in a negative-feedback or positive-feedback (oscillatory, motorboating) amplifier equivalent.

A stable receiver WITH AGC should ALWAYS have some error.

If actual low-frequency oscillation occurs, one cure is to attenuate the AGC control-line range. A voltage divider if the AGC control is through voltage does that. Such attenuation works on the magnitude of the AGC control but will also affect the phase.

I hope this simplified explanation is a help for all who aren't familiar with Control System theory. Control Systems aren't as intuitive as many instructors on the subject claim so there isn't a lot of literature on it in popular publications for hobbyists. Those usually present some

very simple analogue such as the ball governor valve on a
steam engine of old and let it go at that. :-(

"jwb" wrote:

how is the performance of this receiver
any good?

I have two R2000s and love them.
They are not AOR7030+, but they are
very good workaday receivers.

In many (?most?) locations the background
RF noise will limit how sensitive a receiver
needs to be.

The R2000 is rated by Sherwood Labs, a respected
player in the RF game, as having a noise floor -130db.
If you local noise floor is -110dB , then anything more
sensitive won't help you.

The stock filters in the R2000 are "OK", the AM-W is
too wide, but the narrow is likely to be aceptable.

Given that you can pickup a good R2000 for less then $300,
and a AOR7030+ will run over $1500 for a basic version
and go go over 2K with all the treats, the R2000 is pretty good.

At the very least it will make a great beginner's radio, and if your
interest hangs in there you can always rob a bank to buy the
7030+.

There are some very simple mods that make the R2000 a much
better receiver. Frank C decyphered the adjustable BFO mod that
makes SSB/CW/FSK a lot more fun, and allow the use of SSB to
receive AM for crowded conditions.

Go to:
http://www.sherweng.com/table.html
for a comparison of common good radios.

Sadly the list doesn't include the ATS909/ DX398.
A nice basic receiver that the ARRL rated as having a
noise floor of 0.08uV at 14MHz which equals -129dBm.
(At least if my brain hasn't been fried by being outside for
the last 4 days playing radio).

And while the rated sensitivities are nearly the same,
The R2000 is much more sensitive the the DX398.
My wife and I each own a DX398 and I own 2 R2000s.

I have compared the 2 different recivers under many
conditions and I just don't trust the ARRL figures.

There is much more the sensitivity to consider.
The Drake SW radios have a much lower phase noise
then the R2000 and this noise is like a thin vail bewteen
you and the signal. But any of the good Drakes are going
to cost much more then a R2000. And for most listening
the difference is minimal. For real weak signal work, after
you find a RF quite location then the Drakes will outshine
the R2000.
But not by that much.

Go to:
http://www.qsl.net/kc7bum/
for R2000 owners and service manauls and some usefull mods.

Terry

Congressional Research Service
China's Economic Conditions
Updated May 21, 2003
Wayne M. Morrison
Foreign Affairs, Defense, and Trade Division

A paper published to support the World Trade Org. policies with China - LOL!

Let us examine the source of the statistics used to support this paper's
report.

Pg 5, China's Average Annual Real GDP Growth Rates: 1960-2002
Source: Official Chinese government data.

Pg 7, Source: Chinese government statistics.

Pg 8, Note: PPP data for China should be interpreted with caution. China is
not a fully developed market economy; the prices of many goods and services
are distorted due to price controls and government subsidies.

Pg 9, Source: International Monetary Fund, Direction of Trade Statistics and
official Chinese statistics.

Pg 10, Source: Official Chinese trade data.
Note: Chinese data on its bilateral trade often differ substantially from
the official trade data of other countries on their trade with China.

Pg 11, Source: Official Chinese trade data.
Source: Official Chinese trade statistics.

NEXT! Here is Jim's 2nd attempt to pull a rabbit out of his search engine
hat:

> and several private economists, here for starters:
>
>
http://www.earthinstitute.columbia.edu/about/director/pubs/China_CBB03.pdf#s
earch='china's%20economic%20growth'
>
> Do a little research of your own. I'm not here to do it for you.
>
> You're welcome for the education.
>
> Jim

Jeffrey D. Sachs & Wing Thye Woo
Earth Institute at Columbia University
[I won't comment about Columbia U. and their Jihadists - LOL]

Pg 45: "Data caluculated from [China] State Statistics Bureau, Comprehensive Statistical Data and Materials on 50 Years of New China ,1999."

Pg 48: "These were 'estimated' based on communication[?] with [Chinese] 'government' economists."
"Source: Citigroup 'estimates'."

And who are "Zhou and Wang" (Zhou Fangsheng and Xiaolu Wang) the often quoted "sources" in the above link?

Zhou Fangsheng: director of the National Economic Research Institute, Beijing, China, which is under the CCP's Ministry of Finance. [The CCP's economic propaganda dept.]

[Please note the following two quotes were from Chinese Communist Party regulated web sites.]

Zhou Fangsheng - "There are no accurate figures available nationwide on the operations of the restructured enterprises. This is because they are no longer managed by government departments."
http://www.china.org.cn/english/BAT/107811.htm

LOL - what he is saying is there are NO reliable Chinese statistics whatsoever, period.

Zhou Fangsheng - "Presently, there isn't any accurate data nationwide at all that may reflect the conditions of survival and development of enterprises after restructuring, because after enterprise restructuring, they are no longer under administration of the government departments. And it is therefore very hard to make data tracking and statistics."
http://www.eobserver.com.cn/english/readnews.asp?ID=237

LOL - these statements are hilarious! If Zhou Fangsheng had access to or EVER published "accurate figures" without the blessings of the CCP he would most likely be dead.

Example: "New York Times researcher Zhao Yan was formally arrested last October for revealing state secrets, a crime which carries a maximum sentence of death. The secret was believed to be the news that former leader

Jiang Zemin was retiring from politics."
http://www.washingtonpost.com/wp-dyn/content/article/2005/05/30/AR2005053001207_pf.html
"...a Chinese reporter in Hunan province Shi Tao was sentenced to 10 years in prison for providing state secrets to foreigners."
http://www.voanews.com/english/2005-05-30-voa4.cfm

Xiaolu Wang [a Phd candidate in CanahDuh]
"One good spy is worth 10,000 soldiers." - Sun Tzu, ancient Chinese military strategist.

"The CCP's Ministry of State Security (MSS) often co-opts Chinese travelers, especially businesspeople, scientists and academics, to gather intel or purchase technology while they're in America."

"The MSS especially prizes overseas Chinese students, hi-tech workers and researchers living in the U.S. because of their access to sensitive technology and research/development that Beijing can use for civilian and military purposes."
http://www.frontpagemag.com/Articles/ReadArticle.asp?ID=18250

CanahDuh is also a major target of the CCP. There are numerous articles to support this if YOU do YOUR research.

I read your links Jim. Your idea of education falls far short of my experience. Consider yourself "slightly" enlightened. To provide more enlightenment for your feeble mind would require exorcism. At least next time read what you post from your search engine results and do YOUR research.

Ciao!

11. Radio Milne Bay 3365

Hmmm, well actually I read it's against the law in 20 states, even though many of these states are trying to get these laws off the books. A leftover from earlier times when the state decided to tell married people what they can and can't do. Of course there is no federal law which would cover Washington D.C. I just read where a man in Virginia was just fined $250 for his marital misgivings. Oh, but perhaps you want to impose biblical laws on other peoples marriages. How about stoning. I'm sure that's what you would like, and you can make Hillary throw the first stone. If she or anyone else wants to stay married, that's not their right, you and your rightwing compadres will make that decision for Bill and for everyone else.

Lacking a calibrated RF source and much other critical equipment, I do have a 45 year old Eico scope that once belonged to the famous Bach pianist Glenn Gould, and could cobble together a variable dc source and a low freq oscillator. To observe phase response of the open loop system, I'm thinking that the loop could be broken between the AGC detector and the AGC time constant/buffer. Drive the latter and the X input of the scope with the dc supply and superposed low freq signal, feed the receiver with steady state RF carrier and take the output of the AGC detector to the scope's Y input. The variation of the input to the AGC system will cause variation in the receiver gain and the output of the AGC detector. If in phase, the scope would show a line with positive slope; if antiphase, a line with negative slope; if in-between, an ellipse or some open shape subject to time constants and non-linearities. This arrangement would leave the receiver's RF gain control intact and its effect on time constant and phase observable; it appears to modify the discharge resistance seen by a 1uF cap at the RF and 1st Mixer in addition to pulling down the AGC voltage applied to them.

Does that seem to be a practical approach, Len?

it wasn't so much that DC transmission was impractical. It was the fact that it
was being generated and distributed to the customer at the normal outlet
voltage. That makes for huge currents and huge losses. Many modern long distance
transmission lines use DC now, at hundreds of thousands of volts.

I was under the impression that the transformer was known and used before Tesla.
It's just that with DC distribution, it's useless.

It's said that the man Tesla admired the most was Michael Faraday. He was right
the forefront in electrical research.

There are only a few instances when it is OK to lie...
One is when it does not offend God...
Another is to save yer own A$$...
Another might be to a congressman or senator, depends on if they have
the best interest of America and its citizens at heart or not... perhaps
even back then, he knew something we did not...

Warmest regards,
John

But doing a break and enter to steal from your political rivals in a purported democracy is alright? Whoever gave permission for that little mission is the real dog turd, along with those who thought it was a correct way to conduct government affairs.

using your logic, you could never report a crime. You would become dog excrement for doing so.

Well, marriage is a "God thing", really the constitution bans gov't from interfering in church matters--clearly the gov't has no right to control a moral and ethical question as marriage--since marriage first came into existence to please God...

... however, at this point and time marriage is all but a joke, the final capstone is placed on that joke with gay marriage... I am afraid marriage is meaningless at this point and time... perhaps, at some date in the future sanity will return and respect will once again be restored to it...

Warmest regards,
John

The government long ago made marriage a 'government thing'. Most are not married in a church anymore, but by a judge, justice of the peace or other proxy. Further, more than 50% of all marriages end in divorce within the first few years. When the government started requiring taxes (marriage licenses) and mandatory blood tests, marriage ceased to be (at least purely) a "God thing". And govt. has always controlled what married couples do (especially extramarital). Those laws were handed down from the Church into civil law hundreds of years ago.

No... sometimes people become confused over just who the real criminal
is... and, in the shadow of HUGE crimes, small ones are often
overlooked, especially if they actually aid in catching the large one...

Warmest regards,
John

I don't think that marriage is the churches to "hand down", I believe only God could resend his order--since he has not spoken on the matter, at least not to my knowledge, I suspect he has not changed his order... gov't marriages are illegal by definition, perhaps the church is immoral in not standing with the God it claims to uphold--perhaps it was even a false church which seems to have given marriage away--others can judge that for themselves--it is simple logic to me...

JIM,

" The "right wing controlled media"?
" What planet are you on? "

This is the common 'view' form "Air America"-ittes who believe
that the only problem with 'The World' is "America" (USA).
.
.
ABOUT - Deep Throat :
.
In reality now knowing "Who" Deep Throat is(was) and
the Job that 'he' had during WaterGate. It is clearly
evident that Deep Throat committed a Crime and Leaked
Information about a Criminal Investigation that "he'
was involved in managing.
.
If "The President" Richard M. Nixon is NOT above the Law.
.
Then although Deep Throat is an un-common criminal and
is 'he' is certainly NOT above the Law. The very Laws
'he' was Sworn-to-Uphold.
.
so say i - my opinions stated as facts ~ RHF
. . . . .

Well, don't get me wrong--I think America has problems alright...
Our public servants have somehow began to think they are some royal,
ruling class... our borders are wide open and you see the effects of
drugs coming across without limit (... that is a whole other argument!),
of course, they know better than to bring any weapons with them...
<grin>
... but at an airport, they want to strip BORN Americans (and over 40)
naked and search them!!!! go figure... the insane run the nut house...
... jobs leave here at a rate which is as high as the climbing
deficit... yet they will have you believe that Americans unable to find
decent jobs, and pay taxes are NO reason SSI and other programs, our
roads, etc are failing...

... our public servants, from george on down, are living in "La La
Land"... it is all too much for me.... Nero fiddles--Rome burns...
<frown>

Warmest regards,
John

Oh sure Brenda. We see those laws enforced all the time don't we? Give me a break! Most of congress would have to be arrested, all of corporate America, most of the well known evangelist ministers, lessee who have I forgotten? Oh yeah, half the men and women I know!

As far as I know, men and women were pairing off for life long before man started believing in one god. 'Marriage' has been around for millenia in civilizations that believed in dozens of gods. This may come as a shock to you but It didn't start with Abraham or Jesus.

So..you're saying that Watergate would have been ok IF the door to the hotel suite hadn't been locked? That the 'burglars' were actually serving Justice, Truth and Beauty by seeing what the opposition was up to?

That would be as as rich as government representatives believing that Jesus will return when the last tree is cut down. Anyone caught planting trees would obviously become a devil worshiper in the eyes of the fundamentalist government.

Body handling: HTML body converted to readable text

When George Washington made his proclamation to the people, about a week and a half after congress making it law, he said these words, "Whereas it is the duty of all nations to acknowledge the providence of Almighty God, to obey His will, to be grateful for His benefits, and humbly to implore His protection and favor..."

I think it is pretty clear that our forefathers intended marriage under a "Christian God" and not as a pagan ritual--I don't think the original framers of the constitution would ever have stood for gov'ts involvement in marriage... maybe for good reason...

"All governments derive their just powers from the consent of the governed."

Warmest regards,
John

> reasonably portable - may be 7-10 inches long with 2-4 AA battery
> opearation. I read about GE superradio but it seems big needing 6
>D cells. Also it doesn't have any SW band.
Aside from the lack of a SW band, the Superadio (especially a
Superadio or Superadio II (these are better build quality than the
SRIII) is an ideal choice for you. Yes, they do use 6 D cell
batteries, but the life of these batteries in this radio is
phenomenal. I have personally used a single set of batteries in an
SRII for nearly a year, listening around 4-6 hours a day (alkaline
batteries).

Wait a minute! Wasn't this originally a question about a good portable
radio to give to somebody in India, or to give to somebody who would be
travelling to India? And wasn't the lack of shortwave coverage specifically
listed as a negative factor when considering the GE Super Radio?

YOu want a reasonably portable unit, within the dimmensions listed, or at
least very close, light weight, good sounding, with shortwave coverage and
very good MW and FM broadcast coverage? Your choice is a no-brainer. It's
the Tecsun BCL-2000, sold in North America as the Grundig S-350. Medium
wave, (broadcast AM band) coverage on the Tecsun BCL-2000 is the world
standard 520-1620 KHz, and it actually hears out to about 1650 KHz.
Shortwave coverage is from 2300 KHz to 27,400 KHz continuous, divided into
three bands. FM coverage is the standard for most of the world, 87.5-108.0
MHz. That definitely gives you full coverage for what's available in the
INdian subcontinent. The Grundig S-350 version has medium wave coverage
claimed from 520-1710 KHz to cover all the extended North American broadcast
AM band. The BCL-2000 has a built-in power supply which already has the
voltage rating used in India.

It sounds good, runs a long time on four D batteries, and will absolutely
outperform any of the GE Super Radio models, I, II, or III in every aspect
except audio quality. The GE's larger box, and bigger speakers and 9-volt
DC system combine to make for a better sounding radio, especially when
listening to music on a strong local FM station. Otherwise, the BCL-2000
(S-350) is so superior to the GE that the comparison is almost laughable.

I own both a BCL-2000 and an S-350, and I have owned or used several of the
GE Super Radio models over the past 10 years, including the origianl Super
Radio I, and three or four different samples of the Super Radio III. I have
also seen and used a Super Radio II.

Hi Mark

Yes I figured 7 amps was more then enough. I was going to go with the RS-7A only 5 amps. But I was told the RS-7a runs hot and the one on Ebay was from a commercial display. Who knows how long it was carrying a load. For like $20 more I got a brand new one. For me it was worth that peace of mind.

Hi Terry

I was wondering about that. I've been using a surge protector all this time. Can't hurt to plug the Astron into it right? With wall worts and other radio PSU's, they tell you to unplug them so they last longer. I mean they still are warm even if the radio is turned off.

Does it work that way with the Astrons? Even if you turn it off it's still drawing some current and stays warm to some degree? Should I turn off the surge protector or unplug it when not in use?

To make them easier to control. They can't escape and return to
battle if they are hundreds or thousands of miles from their comrades.
It also has a psychological effect because they are more likely to be
spotted if they do escape.

Handy Shortwave Chart
Bill McFadden
billmc@agora.rdrop.com

Band allocations and time zone conversions for the USA. Includes broadcast bands used outside the USA. Also includes WARC-92 broadcast band extensions, which may be used before April 1, 2007 on a secondary (non-interference) basis. For multi-use bands, most common usage is shown. Some stations operate outside the official bands. Information is from Sep 2000 NTIA allocations table, see:
http://www.ntia.doc.gov/osmhome/allochrt.html

Frequencies are in kHz. Usual spacing in shortwave broadcast bands is 5 kHz. Frequencies above 10000 kHz tend to propagate better during the day; frequencies below 10000 kHz tend to propagate better at night.

Please e-mail suggestions and corrections to billmc@agora.rdrop.com.

Phone line as SW antenna
Bill McFadden
billmc@agora.rdrop.com

Changes preceded by "|".

WARNINGS AND DISCLAIMERS

Connecting unapproved devices to phone lines may be illegal in your area. Telephone lines present a potential shock hazard. Do not use this antenna for transmitting. Use at your own risk.

INTRODUCTION

This article describes how to use a phone line as a shortwave receiving antenna. Performance will vary depending on the kind of phone line you have. Overhead lines usually make okay antennas, while underground lines usually don't. A phone line antenna will generally pick up more power line noise than a dedicated antenna, so don't expect to use it for DX work. Nevertheless, I find that it outperforms the telescopic whip antennas built into most portables.

A reader sent in this suggestion: If you're concerned about connecting the phone line directly to the receiver, try wrapping the phone cord several times around the receiver's telescopic whip antenna instead. Performance may not be as good as a direct connection, but it will probably be better than the whip antenna by itself.

Someone else wrote asking about lightning protection. I haven't thought much about it because thunderstorms are rare in my area. Most phone lines have lightning arrestors on them where they enter the house, but the lightning arrestors may pass enough energy during a lightning strike damage a receiver. My suggestion is to disconnect the antenna when not in use if you experience frequent thunderstorms.

HOW TO DO IT

The simplest connection is a single capacitor between the phone line and receiver. The capacitor eliminates all phone line voltages, including ringing, so that they will not harm the receiver.

```
Phone line RF connector
red .01 uF center cond. / \
or o--------||-----------------------------|-o | To receiver
green \ /
50 ohm coax |
ground |
or o-----------------------------------------+
N.C. shield
```

N.C. = no connect. I originally connected the phone line ground (yellow wire) to this terminal, but reception was better without it (if you do this, play it safe and put a .01 uF capacitor in series). If another ground is available, you can connect it to this terminal.

If you are picking up local AM or FM radio stations on the shortwave bands, it is likely that your receiver is overloaded. Inexpensive and portable receivers usually lack the filtering needed to eliminate this interference, but you can make your own filters. Filters can also be purchased from some shortwave dealers.

A high-pass filter can be used to remove signals below the shortwave bands. It rejects interference from local AM stations and presents a high impedance to the phone line at audio frequencies so that the phone line remains balanced.

A low-pass filter can be used to remove signals above the shortwave bands. It rejects interference from FM and TV stations, as well as VHF 2-way radio transmitters. If you use both filters, connect the output of the first filter to the input of the second (don't forget to connect their ground terminals together). It doesn't matter which filter is connected first.

By the way, these filters also work well with random wire antennas. Just connect the antenna in place of the phone line.

The filter(s) should be connected to the phone line in this manner:

```
Phone line RF connector
red -------- center cond. / \
or o----| |-------------------------|-o | To receiver
green | | \ /
| FILTER | 50 ohm coax |
ground | | |
or o----| |----------------------------+
N.C. -------- shield
```

FILTER PLANS

The original credit for the high-pass and low-pass filters goes to Paul Blumstein and John Shalamskas, respectively. Edited versions of their articles are included here:

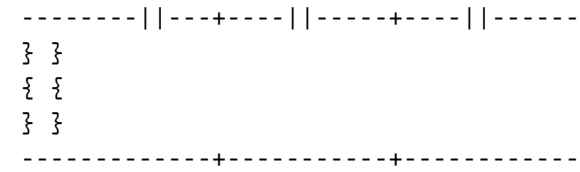
Date: 09 Jan 91 00:54:08 GMT
From: paulb@harley.TTI.COM (Paul Blumstein)

Subject: BC Band Hi-Pass Filter

The following ascii-schematic diagram is a high pass filter that will filter out Broadcast Band (MW) stations. I found it a great boon to my shortwave listening since local MW stations overload my ATS-803A front end & appear in SW, especially with a long antenna.

If you remember my antenna saga, I went from 50 feet to 150 feet & had overload problems causing me to cut back to 50 feet. (Even at 50 feet, I still have some MW interference). I took the advice of Gary Coffman and looked up filters in the ARRL Handbook. With the filter in place, I intend to try to increase my antenna length again.

Anywho, here is the filter, for interested parties.



The outer capacitors are 1500 pf ceramic disks.
The inner capacitor is 820 pf ceramic disk.
The squiggly things are coils (two total). Each one is 2.7 uh.
(a close value will do).

Date: 12 Jan 91 00:44:25 GMT
From: bill@videovax.tv.tek.com (William K. McFadden)
Subject: Re: BC Band Hi-Pass Filter

I built the filter that Paul Blumstein posted recently and measured it on a gain-phase analyzer. Here are its characteristics:

100 kHz -120dB
500 kHz -68dB
1000 kHz -38dB
1600 kHz -15dB
2100 kHz -3dB

The source and load impedances were 50 ohms. Because the filter has five elements, the attenuation is 30dB per octave. The measurements confirmed this.

This filter seems to be a good compromise between interference attenuation and passband response. There is very little attenuation in the 120m band and above. It could use a little more attenuation at the upper end of MW, which could be done with more stages or a higher cutoff frequency. Alternatively, you could build two of these filters and put them in series. (Since two 1500pF capacitors in series are really 750pF, you could eliminate one cap.)

Just for fun, I put 470 ohms in series with the input to see how the filter performed with an antenna mismatch. The response was:

100 kHz -105dB
500 kHz -60dB
1000 kHz -35dB
1600 kHz -15dB
2300 kHz -3dB

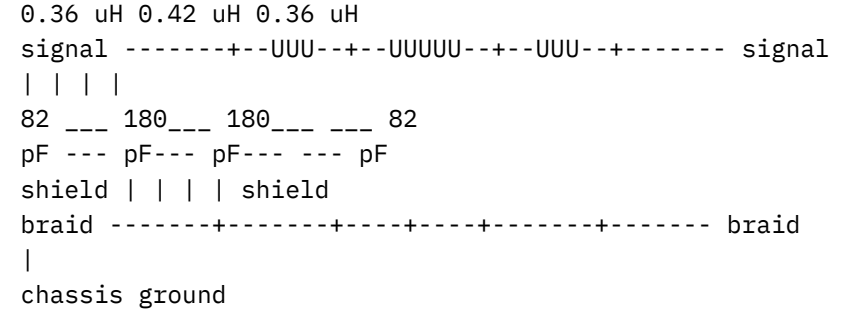
These figures are normalized to the passband response of -15dB, which is due to the impedance mismatch between the source and load and would have been there without the filter. Hence, the filter works almost as well in spite of the mismatch, which is good news to those who use long-wire antennas.

Date: 22 Apr 92 08:59:33 GMT
From: johns@uhunix.uhcc.Hawaii.Edu (John Shalamskas)
Subject: Construction of filters for SW reception

Several people have asked for construction details of the filters I built for my DX-440.

The high-pass filter helped some, but in my location the VHF/UHF broadcasters are also causing problems. So, I dug out the ARRL handbook and chose a 7-element Chebyshev low-pass design that is -3 dB at 35 MHz, -20 dB at 43 MHz, and -50 dB at 64 MHz (all calculated; it works well in practice!)

LOW-PASS FILTER (Rejects FM, TV, etc.)



I had to do a little more improvising at this point. I used .33 uH instead of .36, and .66 uH instead of .42, but it works fine.

The 5-lug terminal strips were perfect for these circuits, since there are 4 lugs plus a grounded lug. All "ground" connections go to the lug that is mounted to the chassis, and the other 4 lugs are used for each of the connections on the signal line. One terminal strip is used per filter. Since both filters were necessary to clean up the hash, I am going to put them both into one box when I get the time.

The proper way to connect them is in series, i.e.

signal in ------- filter 1 -------- filter 2 -------- signal out

There is no difference between ends. They are "bilateral" which means you can't possibly hook them up backwards. (In the above schematics, left and right ends are interchangeable.)

COIL WINDING

You can make the coils yourself using this formula:

L = 0.2 * B^2 * N^2 / (3B + 9A + 10C)

L is the inductance, in uH
A is the length of the coil, in inches
B is the mean diameter of the coil, in inches
C is the diameter of the wire, in inches
N is the number of turns

For small wire, you can assume C = 0.

PARTS SOURCE

All of the parts for the filters can be obtained from the following source:

Digi-Key
http://www.digi-key.com/
701 Brooks Av S
P.O. Box 677
Thief River Falls, MN 56701-0677 USA
Voice: 800-344-4539
FAX: 218-681-3380

PART DIGI-KEY PART NO.
82 pF capacitor P4023
180 pF capacitor P4027
820 pF capacitor P4184
1500 pF capacitor P4187
0.33 uH inductor M8007
0.39 uH inductor M8008
2.7 uH inductor M8018

The cost of these parts is less than $1 each.

Scary

Wed 1 Jun 2005

printer friendly
9:05am (UK)
"Biological Agent" Sent to Indonesian Embassy in Canberra

"PA"

Indonesia's embassy in Australia was closed today after a suspicious package containing what authorities described as a "biological agent" was delivered there. Top government officials quickly linked the incident to popular outrage over the conviction in Bali of an Australian woman on drug smuggling charges.

Prime Minister John Howard, who apologised to Indonesia for the incident, said the agent was a powder sent in an envelope addressed to the Indonesian ambassador, Imron Cotan.

"It would be the first time if the preliminary results are confirmed, such a biological agent has been sent in Australia," Howard told reporters.

The leafy street outside the embassy was cordoned off by police and firefighters and ambulance staff were milling around outside. The street is in a neighbourhood dotted with diplomatic posts - the US embassy is only about 100 yards from the Indonesian embassy, but was not affected by the evacuation. The French embassy is next door.

Foreign Minister Alexander Downer told Parliament in Canberra today that the incident meant it was possible "the Indonesian embassy will be shut down for quite some period of time and the 22 staff will remain in isolation for the next 48 hours."

Downer gave no details on the nature of the biological agent, but he blamed the security scare on public anger over the conviction in Bali, Indonesia last week of an Australian woman on drug smuggling charges.

The embassy had earlier received threats and requested additional security ahead of the conviction of 27-year-old Schapelle Corby who was sentenced to 20 years in prison last Friday for smuggling 9lbs of marijuana to the Indonesian resort island of Bali in October last year.

"We condemn this sort of abuse and we urge people who are concerned about Schapelle Corby to ensure they put their energy into supporting (her) legal defence team," Downer said.

Howard echoed the Downer's words, saying the situation "will do great damage in the eyes of many Indonesian people to the relationship between our countries and it certainly won't help Schapelle Corby."

Corby pleaded innocent and is appealing her conviction and sentence, which have provoked an unprecedented backlash in Australia, with supporters appealing for a boycott of Bali to protest her plight.

A police spokeswoman confirmed that a sample of the package's contents had been taken for analysis.

"A sample has been taken off site but whether that is the entire package, I'm not sure," the spokeswoman said.

She could not say how the package was delivered or why it was initially regarded as suspicious.

Looks like an hour on the clock to me John. I just want to know whose clock?
(and what happens if I set it back?) By the way, in November we are on
Daylight Savings Time. Do we all die an hour earlier in Summer?

brad.

Not if it's GMT. We all die on the same date at the same time.

All of the Astron supplies that Ihave sen have the power switch in the primary,so when it it turned off there is no current being drawn.

In my situation I have radios that stay on all f the time, so my power supply is almost never switched off. Lambda supplies don't have a pwoer switch so I have to unplug them to turn them off.

Thenice thing about a MOV or other over voltage protector, is it will help tostop any line spikes from getting tot he power supply. I use a non MOV style,a Zero Surge, but MOV based units are much more common and can realy save you supply.

I have my "radio desk", a PC "L" desk in fact, wired with a DPDT magnetic breaker so I can flip one "switch" and remove connection with both sides of the AC mains. I have another breaker for the standby gell cells so so with one hand I can knock my entire system down. Likely over kill, but I wanted something that was easy and fast to kill all power in case something goes wrong.

Terry

Have you ever seen or heard the BBC Comedy series (both on TV and radio) "Yes, Minister"?

It's about the power struggles between the politically appointed head of a department and the senior civil servant.

There is an element of that here although in the case the civil servant felt that this was more than a power struggle - the political controllers were abusing their control of the FBI which, in the case of Nixon, was true. (He was hardly the first or last to abuse control of bureaucrats.)

Of course, before Hoover died, the elected politicians probably had too LITTLE control of the FBI.

I don't know if anyone can remember or not but, back at this time "phil donahue", who had that day time talk show, got a russian audience and an american audience hooked up by camera, they carried on a discussion or two--during all this it became quite apparent that the russian people, were at least, claiming the did NOT hate americans and they wished to get along, those americans in the audience were repeating a mirrored reflecting image--I think to anyone watching those shows it became apparent that gov'ts were the real problem and manipulating fears and differences--what followed became history, we began to get along--somehow all the credit got given to nixon and regan--a bit fishy if you ask me.... however, I imagine the politicians still think I am stupid and didn't notice all this...

Warmest regards,
John

How long is too long for a random longwire? I live out in the country with lots of trees around the house and all over my property - have one 80' wire from a tree in the side yard, a 45' PAL end-fed wire from chimney to mast...and not satisfied with overall reception. Feeding both into a Grove TUN4, then out to R75 and R71. Longer wire? I have 500 ft or so of good gauge - how long or short should it be for optimum reception? When I lived in town an 80' wire was great...seems it would be better out here, but it's not for some reason. Suggestions??

Max length can depend on how robust the front end of the receiver is. I once had a 450 footer - my R-71a ate it for lunch. The same antenna blew the brains out of a Sony 2010. (Live and learn. Fortunately the 2010 was under warranty and the Sony repair depot was 4 miles away.)

Years later I had another good one - a 240 footer at about 55 ft high, going to a Drake R8a and a Yahoo Frog-A-Hunnert.

For your situation .. experiment. My experience is the longer (and higher) the better. And with the Tun-4 you should be able to tame it down / tweak it up as needed.

For handling the "higher is better" part - a fishing reel bolted to a wrist-rocket slingshot with hose clamps is 2nd best. A poor man's E-Z Hang, if you will. Hey E-Z Hang was on sale at Dayton Hamvention for $90.00 or so. But for about $20.00 and a trip to the Wal-Mart sporting goods department, you can make one that works fine.

First best - an archery fishing reel attached to a good hunting bow. Awesome results if you're a decent archer.

Ok .. the *real* first best is a Lyle gun and a few thousand feet of rope - but this might be overkill. :-)

73. Quasi Synchronous??

Experiment, experiment, experiment. Best advice yet. I'd take higher
over longer. I 'spearminted with 1/4 - wavelength verticals with an
elevated feed this spring, and am really surprised. Get 'em 20 feet
off of the ground, and make 'em out of wire. I've been using one with
4 radials for 30 Meter Ham and 31 Meter Shortwave use, and have
found it works really well from about 5 MHz to about 22 MHz for
receive purposes. Barring that, if you're going with a longwire
horizontal,
longer really is better, and get it as high as you can.

I thougth I was the only one doing that! Here's another good'n. Skip the
slingshot, get a deluxe el-cheapo Zebco 202 or 404 fishin' combo from Wally
World (tm), and put a half - ounce sinker on the end of the line. Cast it
into the
highest tree, and the sinker will drop down to the ground. Clip off the
sinker,
attach wire to the end, and pull it up through the tree. Presto! A nice
folded
vertical that will work really well for shortwave purposes. Oh, yeah....use
well-insulated wire.

> Yeah, he *was* the low point - until Clinton came along.

Personally I find getting a blow job and then lying about it to be
less criminal than condoning a systematic conspiracy to subvert the
democratic process and then burning the evidence tapes. No that that
make Clinton any less of a jerk.
Both, however, are greasy kid stuff compared to starting a war
killing tens of thousands of civilians and a thousand of your own troops
based on a tissue of lies.

Once a random-wire gets beyond 1-2 wavelengths long it will start taking
on "longwire" characteristics, namely being directional, low-angle, and
a tad of gain in the direction the wire points. Reception off the sides
and rear may be diminished.

If you can utilize this to your advantage then by all means, go for more
length.

Which radio. The term could mean a variety of things, but if you want a specific answer, please indicate which radio and provide a link to the use of the ter,.

Then, somone may be able to provide the correct (exact) answer.

79. Re: Astron Power Supplies Questions

Newsgroup: rec.radio.shortwave
Date: 2005-06-01 17:45:58 UTC
From: w_tom <w_tom1@hotmail.com>
Message-ID: <429DF456.9D845500@hotmail.com>
Source record: 23517

First appreciate what the MOVs do. A transient coming down black wire is shunted by MOV to all other wires. Now a transient, seeking earth ground, has more paths to find earth, destructively, via the adjacent appliance. Protection is located in earthing; not inside a plug-in protector. An MOV is effective if connected short from each utility wire to earth ground. This is why 'whole house' protectors are so effective and why plug-in protectors can even contribute to damage of the adjacent appliance.

These concepts are often discussed in the newsgroup rec.radio.amateur.antenna. Some protection systems use MOVs. Some require no MOVs. But in every protection 'system', only one component that is always required. Earth ground. Plug-in protector have no such earthing connection - so they avoid the entire topic. Plug-in protector provide no effective protection, so are even undersized - too few joules sold overpriced.

MOVs are shunt mode protectors. Another type is series mode. Series mode protectors will supplement a protection 'system'. A series mode protector alone must stop, block, or absorb what three miles of sky could not. Will not happen. Series mode protectors alone must act like a dam. Insufficient. Series mode protectors used in conjunction with a 'whole house' protector will act like a dike. Now we are talking effective protection. Series mode protectors are sold by Zerosurge, Surgex, and Brickwall. They can supplement the primary and secondary protection 'systems'.

Notice that safety ground wire that bypasses a series mode protector. So the Zerosurge, et al block a black (hot) or white (neutral) wire transient that simply enters electronics via the direct green (safety ground) wire. Where is the protection? Just another reason why series mode protectors can only be part of a protection 'system'.

'Whole house' protectors being so inexpensive and so effective that the telco even installs one on your incoming telephone line - for free. Notice what that telco protector connects to? Earth ground. A protector is only as effective as its earth ground.

Quasi synchronous detection is a non-PLL type of sync detection.......like
the type that was used in the Drake R7 receiver. Basically, it consists of
using a mixer to demodulate the AM signal in this way: the I.F. signal is
split into two paths.
The unprocessed I.F. signal (one of the paths) is applied to the RF port of
a mixer, while the other path is squared up through a limiting amplifier and
applied to the LO port of this same mixer.
The demodulated audio is taken from the I.F. port (output port in this case)
of the mixer.
I did a similar design a couple of years ago, using a Philips SA637 Digital
FM Receiver chip. Philips discontinued that device so I went with the AD607
for my subsequent design.
I hope this helps.

Ahhhhh yes, in the Drake R7 it's known as "synchro-phase" detection.

Brian:

I see no change it what the majority of Americans want, or would pass by vote--I do see weird minority fractions try to imprint us with the view that everyone is of their opinion, belief or view... it is not any single person, or group of people who has a right to decide--this is ONLY the right of ALL citizens--now I am afraid we see our public servants shucking that concept and obligation--to represent ALL (the majority), and focus on some small sub-set of the population (minority)--this is un-American and treasonous against the constitution and America as a whole--really, they need to stand judgment on these failings... perhaps at a time in the future--they will...

Warmest regards,
John

For One and All,
.
So no one wants to deal with the Fact that Deep Throat
Broke the Law as a Sworn Law Enforcement Officer
and Now wants to Profit by his Law Braking.
.
Deep Throat was a 'prop' to pump up the Media Hipe
about the WaterGate Story as promoted by the Liberal
Media to "Get Nixon" at any cost.
.
Deep Throat was used to 'anoint' "The Press" as
Super Citizens with more Rights then the Average
Citizen (the common man).
NOTE - The Press has no more rights then the
Average Citizen. The Press is NOT "Anointed"
other than as a function of Media Self Promotion.
.
Deep Throat is Not a Hero [.]
However, Deep Throat is a 'common' Criminal [.]
.
so say i - my opinions stated as facts ~ RHF
. . . . .

> with N. korean and Iranian audiences.
You shouldn't need to wonder. The vast majority of N. Korean's dream of
living up to the high standard of an rundown American trailer park.
They work long hard hours in the faint hope of approving the conditions
that their families live under. They are no fans of their government
but feel powerless to do much about it. The rights we exercise everyday
without a second thought are non-existent in their world. Almost the
entire population would like to see their country reunited under a more
western type government. The last thing they want is another war in
their homeland.

The Iranians are better off then the NK's but still live well below the
average American's lifestyle. They are a very religious country but the
vast majority practice a peaceful religion. IB they are very leery of
us because of our history of support for the Shah. However, the irony
of the situation behind the Shah being deposed was that he had sent
massive numbers of young Iranians to the US to become educated. After
they saw the freedoms we held they went back to Iran demanding changes.
So there is still a very strong undercurrent of support for western
ideas. Initially the clerics held almost total power there but that has
been slipping each year and now are scrambling against popular opinion
to hold down opposition parties. As a whole they are a proud people who
are happy with the progress their country has made. They would
absolutely hate to see all the go to waste with a war.

100. Try a SkyWire Loop Antenna -vice- LongWire Antenna

Newsgroup: rec.radio.shortwave
Date: 2005-06-01 23:02:16 UTC
From: RHF <rhf-newsgroups@pacbell.net>
Message-ID: <1117663795.740321.132570@f14g2000cwb.googlegroups.com>
Source record: 23538

DX99,
.
Instead of a Long Wire Antenna.
Why not try a SkyWire Loop Antenna. "Sky Wire" ? ? ?
Check-Out the SkyWire Loop Antenna Group on YAHOO !
For people interested in building and using a SkyWire Loop Antenna.
GoTo=> http://groups.yahoo.com/group/SkyWires/
.
One Wave Length for the 120 Meter Shortwave Band
is roughly a 419 Feet Loop Antenna. For Receiving "Only"
use a 4:1, 9:1 or 16:1 Balun and Coax Cable Feed-in-Line.
.
One Wave Length for the 160 Meter Amateur Band is
roughly a 529 Feet Loop Antenna. For both Transmitting
and Receiving use a 1:1 Balun and Coax Cable Feed-in-Line
or a direct connecting using Ladder Line.
.
Any 'shape' Circle/Square/Polygon you can make using
the available Trees with the Wire Antenna Element about
20 Feet above the Ground.
.
The Horizontal "SkyWire" Loop Antenna can be a very
Low Noise Antenna with relatively Strong Signal Levels
due to its large size.
GoTo=> http://groups.yahoo.com/group/SkyWires/
.
iane ~ RHF

Sorry, Deep Throat is a real hero whether you like it or not. His info led to 13 Repugs going to jail because they were criminals. Can you even begin to imagine, how many current repugs will go to jail someday? Soon it will be Tommy D and Rush.

FDR:

Well, not one one following--those who follow Jesus would not be--IF
they follow the word... as there God (through Jesus) commands them to
turn the other cheek and forgive--now idiots claiming to be christians,
but NOT following the teachings, may, indeed, be dangerous... I'd check
before I trusted 'em...

Those who follow ONLY the old testament (non-christians) might be
dangerous too... as it (old testament) states "an eye for an eye, a
tooth for a tooth", from my little studies on this--muslims and Jews
both have this book in their teachings and follow it as if no later
orders were given...

Warmest regards,
John

RHF:

I am just glad he broke the law to disclose a crime--he is justified in
the commission of a "crime" since that "crime" was required to bring to
light the real crime...

... and example would be in speeding in a car to get away from a guy who
was also in a car--and shooting at you!!!

No jury in the world would ever convict you of a "crime."

Warmest regards,
John

I believe receivers like the Grundig Satellit 500 (and maybe the 700
also)
used this type of detector design, but it was no match for true
sideband-selectable
synchronous detectors, such as found in the Sony 2010 or Drake SW8/R8B.

OK

I'm interested in the old Lowe SRX-100 also known as the AKD Target HF3 and now the Nasa Target HF3/p or Nav-fax 200. Check on the very bottom specs under "demodulator: I'm going to buy one. They look cool and seem to have the same Lowe slower rate, faster rate knob. Simple receiver but I seem to like it from what I've read about them. Now this company makes a Nasa Target HF5E that I can only find in Germany. It's supposed to be comparable with the Lowe 150.

RHF:

Well, if you are limited to only two groups in your thinking, democrats vs republicans and/or liberals vs conservative...

However, this promotes argument of the kind where one roots for one football teams as opposed to another... I usually find sports idiots to be of this ilk, only two choices and call the other guy a name... reminds me of elementary school... politicians love it... they say, "Look at all the ignorant people out there!" <grin>

Hey, some are just limited in thinking...

Warmest regards,
John

I can find them cheaper then that link. I found one place in the UK that is
$287 USD shipped. It's 136 GBP plus 21 GBP for shipping. Here they are on
Ebay from the UK but price is 145GBP and the seller told me shipping would
be about 19 GBP for shipping. So a little cheaper from a UK shop I found but
not by much.

Here's one without the weather fax capabilities. The other one has the
weather PC connection unit. BUT, keep this in mind. The regular HF3 HAS a
headphone port.
The other model doesn't have one. You give that up. But the HF3/P is able to
connect to a PC's sound card.

http://cgi.ebay.com/ws/eBayISAPI.dll?ViewItem&category=48711&item=5728216035&rd=1&ssPageNa
me=WD1V

and the other model:

http://cgi.ebay.com/ws/eBayISAPI.dll?ViewItem&category=48711&item=5746003055&rd=1&ssPageNa
me=WD1V

Here is the better Nasa Target HF5E. I found a place in Germany that has
them for 299 Euros or $367 USD. The exchange doesn't seem right but that's
what they are asking. Only thing is they don't take credit cards from the
US. You have to wire them the money first. Here's what it looks like.
Hard to find data on it.

For shortwave (3 Mhz and up) and today's modern receivers anything longer that about 100' is probably just going to raise the noise floor. I would recommend getting the wire away from the house and noise sources and feed it with coax. The key is S/N ratio with most antennas. Bringing the end of a random wire antenna directly into the house usually results in pickup of the home's "noise aura" which can be several S-units.

I have a R75 and a Lowe 150 already. There are lots of other radios you can buy with that money. But there is something about British built rigs. They are well built beasts and fun to use.

Plus, to me, it's a new novelty radio and gets me excited!
Hey, $265 is not that much for a brand new radio that looks like it has the Lowe type design to it. Remember Lowe was the first to put it out on the market. People spend $200 for dinner in a fine place. It's what it's worth to you.

RHF:

Whatever, to me political zealots, legal zealots and religious zealots, etc... belong in the same institution--I have found them ALL to be dangerous, besides, if it doesn't go against the creators laws--I have a hard time generating respect for any given law anyway...
... yanno, take "thou shalt not steal" for an example... I don't see where that makes any stipulation about just plain stealing, stealing with deception, stealing across state lines, stealing with a computer, stealing at night, stealing with a gun, stealing by a congressman, stealing by a rich man, stealing by a corporation, etc... when man starts making umpteen different laws to cover stealing--each different--and some are granted exception or leniency to the law--then the old respect goes right out the window--it is kinda obvious--either you ARE stealing, or you are NOT... only legal zealots get hung up on it... same goes with a bunch of this BS...

--in my opinion--this finally leads to all laws being ignored...

Warmest regards,
John

<http://www.juiceenewsdaily.com/0505/news/water_gate.html>
.

Determining whether Felt broke any laws would require analyzing each piece
of information he either provided or corroborated, said E. Lawrence Barcella
Jr., who was a young prosecutor in the U.S. attorney's office in Washington
at the time of the Watergate break-in.

The idea that Felt broke any laws is misplaced, said Stephen Kohn, chairman
of the board of the National Whistleblower Center. "FBI agents have a First
Amendment right to go to the press," Kohn said, citing a 1968 Supreme Court
decision that he said protects people who expose government misconduct.

kHz is so much easier! Typing in 15145 is much easier than 15.145...

And kHz is generally what the cognoscenti use, at least in shortwave.

FC,
.
I would agree that about 100 Feet of Wire using Low Noise Antenna
building techniques :
* Wire Antenna Element [Far-End-Fed Inverted "L" Antenna]
* Remotely Located Ground far away from the House/Building
* Matching Transformer [UnUn] So called "MLB"
* Coax Cable [Feed-in-Line]
Would serve most Shortwave Listeners as well as any longer length
of Wire in a LongWire {Random} Antenna.
.
However if someone is committed to putting 400-500 feet of Wire
in the Air : Then the SkyWire Loop Antenna is the better all around
Omni-Directional Shortwave Listener Antenna for the use of that
Amount of Wire then a Long Wire Antenna of 400-500 Feet Length.
.
iane ~ RHF

Source record: 23674

The Community says it will not be swayed by what it has called an "act of propaganda" by the Australian Government after the delivery of an alleged 'potentially' hazardous parcel to the Indonesian embassy in Canberra.

Blown out of all proportion

HoWARd says the substance was not benign and sending it was an act of reckless indifference to human life. He says tests have shown the white powder sent to the embassy is a bacteria belonging to the 'bacillus group', the family which also contains the anthrax bacteria.

Isolated

Staff at the embassy have been isolated, with further tests being done on the powder.

But the ACT's chief health officer, Charles Guest, says it is highly unlikely the substance involved is dangerous.

"The powder has been tested," he said. "It contained some bacteria.

"Now, bacteria are everywhere in the universe so it's not particularly significant.

Which means this could have easily just have been a potentially harmless prank and actually it was more likely than not the later yet John HoWARd, Alexander Downer, and Stupid what's his name? Kim Beazely (the well paid loser) all stood up on their high haunches alarming the general public like it was a terrorist attack?

All three of them seem overwhelmingly all too willing to embrace terror for their political posturing which would validate the cost of the biological equipment and the extreme measures taken by emergency services (at a cost of God knows how much) otherwise that equipment would just sit there in mothballs unless something validates it, even if they have to make it up?

Ignition

This also promotes a fear and additional security measures that impact on our human rights and freedoms like the Anti-Terrorist Act etc.

Blast off

It also promotes HoWARd's War campaign with excuses to spend even more on defence and on military hardware.

Projecting fear into the community

HoWARd has also called on Indonesians not to react to the incident after he reacted to it? The news from Canberra has dominated Indonesian press and television reports?

Parliamentarian Joko Sisilo, who sits on Indonesia's House Foreign Affairs Committee, says Indonesia should now issue travel warnings for Australia.

He says the attack proves Australians are capable of committing their own acts of terrorism.

But he is wrong! Actually it proves the Australian Government and its pro-government media allies are all to willing to blow things out of all proportion making ' Mountains out of Molehills', more like it!

The spokesman for the Indonesian Foreign Ministry in Jakarta, Marty Natalagewa, says the incident underlines the need for responsibility in reaction to the Schapelle Corby case.

"If any good perhaps comes out of this latest sorry incident, it's perhaps it works as some kind of like an alarm bell to those who have been whipping up public emotions," he said.

Mr Natalagewa says the attack would not force changes to Indonesia's presence in Canberra.

Tests propaganda

ABC: "Meanwhile, tests on the white powder sent to the Indonesian embassy in an envelope could be completed by today.

It is already known to be a bacteria that is present in a range of products from snail pellets to anthrax."

[Why not any product from your local pharmacy or hardware store?]

ABC: "Australian officials are waiting for a translation of a note sent with the white powder to determine the motives of the attack.

Foreign Affairs Minister Alexander Downer has said that at this stage the Federal Government cannot confirm if the threat is related to last week's jailing of Schapelle Corby in Bali.

"There was a note in Bahasa ....that's the Indonesian language - we haven't got a translation yet and obviously that will come to us fairly soon," he said.

"We understand that the parcel was sent from Victoria.

"We can't at this stage say if it was directly related to the Schapelle Corby case."

HoWARd says he now wants to wait for the test results.

"The analysis is going on and when we know the outcome of that then something further will be said," he said.

"Plainly it's not just a case of some white powder being sent - whoever sent it had a more evil intent than that."

Mr Howard says the incident will damage relations between the two countries and condemned the action.

Federal Opposition Leader Kim Beazley [a well paid loser] has described it as an act by evil cowards.

"If it is connected to debate and the issues around Schapelle Corby's case, it will deal it a body blow," he said."

A sync detector does not have to be a sideband-selectable type to be a what would be referred to as a true type of sync detector. It does need to be a PLL type, though.

It was actually quite good sounding. I gave the prototype board to a friend
of mine. I've got about 1300 of those SA637s on
hand.....one of these days, I will find a use
for them.
I gave Neil, from AADE about 1000 of them for a future project a few years
ago.

I had one of those. It did have quite a bit of RF gain, but the I.F. strip
did not have the gain that the Plessey SL6700 that is used in the HF-150
does. They are not the same receiver, performance wise. If you can find one
in the 125 dollar range, it isn't a bad deal.

I got to this thread after several people already made good suggestions
but to answer your question directly a random wire that is not cut to a
specific frequency and is intended for reception over a range of
frequencies. The 80 foot wire qualifies.

The other question of why the 80 foot wire is not working as well in the
new location could have a number of reasons. The wire is half an antenna
where the other half is ground so you may not have as good a ground at
the new place. The soil conductivity may be worse at the new place. This
could be made better with a more extensive ground system. An alternative
is to make a complete antenna that does not need ground.

Well, when I have a specific instance in mind I type out the frequency but in this case I was tuning through the bands and recalled that I heard Brother Stair in passing through them but did not stay to listen so I generalized that I heard him on certain bands. I did not note the specific frequencies that I heard him on. The bands are noted by meters not frequency so you must then have a frequency definition of the SWBC bands.

>Does that seem to be a practical approach, Len?

If that tells you what you want to know, it is practical.

However, the phase information from that Lissajous display is
rather gross. If, with a closed-loop condition, there is
marginal stability, then a better handle on phase response
would be necessary...or just reducing the AGC control-line
magnitude (which would offer less AGC action).

I'll have to presume the Eico scope doesn't have a slow sweep
rate. If that scope has a DC input on both horizontal and
vertical, then the cobbled-together low-frequency source could
be built with a ramp output that would act as the horizontal
sweep; the display would then be just one cycle but that would
indicate the phase difference. Suggestion for source: Exar
XR-8038 DIP which has both square-wave and sine outputs.

A "bounce-less" switch circuit can be put together out of two
NAND gates connected as an R-S flip-flop, an SPDT switch
grounding/earthing one input on each NAND gate. That simulates
a very extreme "attack" situation to check the response of the

AGC control-line circuit. It's a bit much to infer anything of numerical value out of that, though, since the amount of analysis of the waveform out of the AGC control-line is lengthy and probably more time than it's worth.

I'll have to remind all that a reasonably-calibrated RF signal source is also necessary. That will yield both the open-loop gain and the closed-loop gain...which can then be applied to a standard negative-feedback amplifier formula. Even with a "cheap" RF signal source, an RF output voltage meter circuit (even if a 1N34 diode rectifier is used, good to ~ 30 MHz) will provide a maximum RF output level. Resistor Tee or Pi pads built on DPDT switches (cheap slide switches work out best due to least internal inductance) external to the RF generator are effective although not to the wideband accuracy of the waveguide-below-cutoff type used in older commercial RF generators. A sequence of 1, 2, 3, 5, 10, 20, 40 etc db pads would do well enough. If needs be to make the pads the most accurate, a spoiler pad of around 10 db at the start of this chain of pads would insure a good source impedance. While not of greatest metrology quality, those would be better than nothing at all.

Note on the above: The RF signal generator meter would determine the signal level into the attenuator chain. The chain's output would then be that value minus the total db of the attenuators switched-in. Making the attenuator-switch mountings in-line in an outboard long metal box having 1:2 ratio of width to height will reduce most of the RF feed-around across switched-in attenuators; if that is 1 x 2 inches it is roughly high C-Band waveguide size and a maximum of 30 MHz RF input would certainly be below cutoff frequency of that "waveguide." Attenuation through that long metal box would be a linear relationship of db v. length. I did just that with an old Heathkit RF generator (meter calibration set against lab equipment) and outboard switched attenuators...until I lucked-out and obtained a pair of HP 355 step attenuators (wideband to 500 MHz, easier to use).

You certainly would if they were children. Kids will play with kids in any language. Adults will step over them to duke it out. If the adults can be made to sit still and get to know each other, they find it a lot harder to shoot or bomb each other. Those who don't are conscience-free psychopaths or politicians depending on whether they were born with a silver spoon in their mouths or not.

They actually have some quite decent skiing in the north of Iran. Saw it on TV. I wonder about Korea. It'd have been good to learn the lesson of Iran: don't support murderous a--holes like the shah or some people will get really pissed off.

Hi Lucky,

It was ok.................. not a lot of gain in the I.F. system, but it did have enough RF gain. It is probably a matter of preference, but I like my radios to have their gain distribution set up so that the I.F. strip provides most of the system gain. This way, you get a higher amount of headroom in the front end if the gain in that section of the receiver isn't too high.
It did work better than any of the portables I have used. I bumped up the gain in the I.F. strip a little bit, and I was relatively happy with it.
I ended up trading it off in a combination deal for a Yaesu FRG-100, which I ended up selling along with the optional CW filter and the FM board for 300 dollars. Some older fellow in one of the Carolinas bought it.

Well Pete,

if you didn't end up keeping it that does say something about it. I just get
a kick out of new radios especially foreign ones.
Could they have improved them somewhat since you bought one? Was it the Lowe
SRX-100 or the Nasa Target HF3?

Lucky

They do?

I find that rather hard to believe considering that one can use a simple volt meter and a 20,000 turn coil (about 2 feet in diameter) under a 500 KV line and see loads of AC. on DC setting, the reading would be ZERO (gee, I wonder why?).

unless you are being sarcastic, I find this statement of yours to be in error (as would most of the electrical engineers as most of the major utilities).

No, he's correct. There are a lot of long distance DC transmission lines.
These are the ones that connect between different sections of the grid, I
believe. You can certainly tell the difference between the AC and DC
transmission lines when driving under them while listening to your AM car
radio. The AC lines will have a nice loud hum or buzz, the DC lines just
create a crackle. South of Seoul, there are two sets of lines crossing the
main highway. The first set are AC lines, the second are DC lines, feeding
directly over to the east coast.

in basic comm text books this is called is called 'coherent'
detection. under certain conditions it can be demonstrated that the
coherent demodulated snr is a 3-4 dB better than the "diode"
(non-linear self-mixing) demod and a 3-5 dB worse than synchronous
demodulation. under severe fading the coherent demod can actually
underperform the diode demod depending upon the mixer/post-filter/etc.
whereas the synchronous pll output can maintain the mixer input even
if the signal disappears briefly (wrt the loop time constant and phase
detector type)

because of the fading performance, the ease creating high quality
quadrature pll outputs, and the inherent input phase noise attenuation
in the pll, it's (coherent demodulation) almost never used anymore in
mixed signal designs...

Hi there Jimg

It's strange they are still producing and using it. I guess they don't want to change the factory line and design. I think this receivers main use is the HF3/M model for boats that need weather faxes. But, I also read the plain HF3 really fulfils a need in Europe and it sells very well over there.

Like Pete said, if you get it at the right price, around $125 USD, it's not a bad deal. It's sort of a portable that looks like a tabletop. I just like British made radios.
For me it will be more of a novelty to have fun with.

Thanks
Lucky

Hi All,

I have for sale a mint condition Grundig YB-400PE. It is just slightly over a year old and has been used as a bedside receiver in a non smoking household. It has gone on a couple of trips with me where it has been in a clean hotel room environment. I have the original box, manuals, vinyl case, AC adapter and roll up antenna. The roll up antenna has spent some time outdoors on trips so isn't as clean as the radio.

I'm asking $100 plus shipping or would like to discuss a trade for a Sony ICFSW7600GR in similar excellent condition from a non smoker.

Thanks very much.

Even 20,000 turns will have a tough time picking up DC. However, one might
also be under an AC power line. I suppose one could find it confusing.

HV DC has advantages. The maximum voltage is limited to insulator flashover
and AC carries a 41% peak to rms voltage penalty when compared to DC. Also,
DC works just fine with two wires rather than the three which are necessary
for three phase power.

I probably don't know nearly as many electrical engineers at utilities as
you do, but, as a radio hobbyist I can imagine what sort of voltage peaks
one might get with a power line damaged at some 1/4 wave multiple of the
power line frequency.

201. Astron PSU Arrived..DENTED

Newsgroup: rec.radio.shortwave
Date: 2005-06-02 15:19:12 UTC
From: Lucky <lucky@TheBotStopsHere.com>
Message-ID: <119u8rile15d576@corp.supernews.com>
Source record: 23737

Hi Guys

Well my "brand new in Box" only taken out of box for pictures, arrived with a dent in the bottom left hand side near the switch. It was double boxed and had bubble wrap around it. The boxes arrived in Perfect condition. Not crushed at all.

I wondered what the hell is going on here.
So I go back to the auction and take the picture he put up and enlarged it. Sure enough you can see the dent in the picture if you look hard. I can't believe this shit.

Take a look at the auction yourself. Take the picture and enlarge it. That's the only way to see it. Look at the bottom left hand side and you can see it's dented it on the side. What would you guys do? It looks like it might have been dropped or something. Notice how he doesn't mention ONE word about this dent. WTF is this world coming too?
Could the PSU be damaged inside?

Look along the left hand side and move down near the bottom. See it?

It appears you don't know what the Watergate break in really was about.

You could try a google search on the words "watergate" and "hookers".

Calling it "a systematic conspiracy to subvert the democratic process" is over the top.

John Dean wanted information on the hookers the DNC was using for party bigwigs, in the hopes of getting the hookers to pass along information they got from their clients. The "burglars" went in with a key to the desk of the gal in charge of procuring the hookers, and it was her phone they bugged, and they aimed the camera at her desk.

The fact President Nixon won a landslide re election after the break in was publicized, and connected to people working to reelect him helps illustrate how incredibly dumb this idea was.

President Nixon obstructed justice and brought himself into the mess by trying to protect subordinates.

President Clinton lied under oath to protect himself in a law suit.

Neither act was appropriate for a President.

As for President Bush, you're entitled to think what you want, but I've yet to see credible information to indicate he didn't believe everything he told us.

I also feel you should consider the hundreds of thousands of civilians the Saddam regime killed for sport, and those killed by insurgents before criticizing the President for the unfortunate loss of innocent life caused by our military in the war to establish democracy in Iraq.

<<A sync detector does not have to be a sideband-selectable type to be a what
would be referred to as a true type of sync detector. It does need to be a
PLL type, though.

Pete>>

This is true, of course, but a sync. detector in modern equipment that is not sideband-selectable
for the SW environment, where there's often so much adjacent channel interference, is a perversity.

Part of life on ebay.

Leave negative or neutral feedback (assuming it works) - but first try to get the person that sold it to allow you to return the item or adjust the price down for the dent. Power supplies are fairly resilient to dents. Test t with an oscilloscope if you have access to one. Trust me, someone with a 183 positive feedback clean record will want to do anything to keep it that way!

I don't think so.

He should have talked to a grand jury.

I've read an account by someone in the justice department who said the newspaper stories based on the "deep throat" leaks served as a warning to people who didn't realize they were targets of the investigation.

Sorry to hear of your misfortune, Lucky. I hope that the unit works okay. Indeed, as Namikis observed, such occurances as this are "part of life on eBay."
In the meantime, to vent your anger, try giving that Everlife flashlight a good shake, okay?
By the way, did all 100 of the pipe screens arrive in acceptable condition?

Yes, it's totally shot and will probably burn your high-rise condo down. And
then the insurance won't pay off because you were foolish enough to buy a dented
power supply.

Toss it out the window. Wait... look out the window first and make sure no one
is down there lest you be sued, and then a fire will be the least of your
worries.

"Lucky"... sure, you betcha.

According to the description in the auction:
This was removed from a factory sealed box only to be photographed.

By not mentioning the dent, I think he is hiding something. I wouldn't take a chance. I would return the item to him and leave negative feedback. That will teach him a lesson. I wouldn't accept a financial settlement, because if the item is defective its useful life is reduced.

I bought a Drake R7 a few years ago on eBay and the guy told me it was mint. Upon opening the original box I discovered a small hairline scratch on the bottom plate.

Whatever should I have done? Used a less powerful magnifying glass?

Your input appreciated.

Er, what's wrong with using "The 7 MHz Band" instead of "The 39 Meter
Band" (or 41 or whatever number is used). A quick look in the FCC
regulations (Part 73 subpart F) shows that officaldom doesn't bother
with meter band designations.

To bring this back to WWCR or whoever is running in the 3 MHz band,
what regulations are they operating under? My (older, 1989) copy
of the broadcast regs says that international broadcasting starts in
bands above 5950 kHz. (73.702f)

Huh? Try the Pacific Intertie (as I think it's called) between the
Columbia River Dams and California. Also most of the lines out of
Hydro Quebec, and most of the lines tieing the independent Texas power
grid to the rest of the midwest and south.

AC lines get their load determined by phase shift and are a total bugger
to control. DC lines with their (expensive) AC inverters at the working
end are programmed to be smarter. An example is the power failure back
east a couple of years ago where all the generators hooked to the AC
lines FUBARed, but the Quebec grid stayed up, despite being a major
power provider to the area.

Why is using an I/Q "Image reject" mixer better than just having a
narrower filter? As I understand it, you're not going to get more
than 50 dB rejection with an image reject mixer.

Oil? You drive a vehicle 'tard boy? You heat a home (or trailer)? Do you use any plastic products? Is the portable you tote made of plastic? Do you eat any food that might be delivered to your hovel by virtue of the internal combustion engine?

If so, you'd better be damn thankful that someone out there in the real world is working to secure an oil supply so as to keep you and the rest of your retarded inbred relatives going.

ok. if you say so.....

However, all 200kv and up lines that traverse Arizona are AC only.

I have had chance to talk with a few "engineer" types from APS/SRP and the nuke plant down the way (all of them are hams btw) and they all report the same thing. here in the US, no one (according to them anyway) uses DC for any kind of long distance transmission. the power grid is tuned to 60 hz for a couple of reasons:
1. for national standard timing of the 60 cycles grid
2. AC at such voltage levels is far easier to deal with (very low current at very high voltages).

DC to AC conversion at very high voltages (in excess of 10 KV and up) becomes extremely problematic. also, ohms law (in case of DC circuits) would dictate that the losses would climb exponentially given distance on a conductor (most of the US power grid is either steel or aluminum cabled).

I do not know how it is done other places, but in the US, its AC all the way from power station to wall plug.

The way things seem to be going price wise I'm afraid it looks as though shipping will be over $1000, and then once one figures in the UPS charges, who knows how much it might be.

Odds are it's just cosmetic damage.

Power supplies aren't the sort of thing people normally buy for beauty.

The seller should have mentioned it - so you might ask for a price adjustment,
or to return it for a refund. But life is too short to get worked up over a
$5-10 problem.

The fact the damage can be seen in the picture if you look closely doesn't help
your case. He could reply that you should have looked closer before bidding.

Obviously if it's dead, he owes you a refund.

I don't know what the Radio Shack Canada stores are like. If they are anything like those in the U.S. it will not be a loss.

The Radio Shack U.S. stores are like miniature versions of Circuit City stores, so the selection of mainstream stuff isn't all that great. At one time they were a good source for electronic components, odd-sized phono jacks, unusual batteries, etc. But they have gone mainstream and I can get the same stuff at Best Buy, Target, etc for less.

"I bought a Drake R7 a few years ago on eBay and the guy told me it was
mint.
Upon opening the original box I discovered a small hairline scratch on
the
bottom plate."

If it was minor and the price was reasonable I would have just enjoyed
the radio. But aren't you a bit late to worry about the deal???????

Yes, I know. I was using it earlier this afternoon and I was beside myself simply thinking about that hairline scratch on the bottom plate.

Really ruined the listening experience for me.

I'm certainly sorry for bringing it up, but it's certainly a sore spot for me. That darn eBay... they should be shut down.

I was on the phone this afternoon with the Mauritanian Embassy, perhaps I should have mentioned it to them in our conversation. They may have been able to do something.

Watergate is so far behind that the announcement of deepthroat's real name is is anticlimactic.

I was surprised that Felt chose to ignore reporters Bernstein and Woodward when making his announcement. Not very classy considering he provided both insights into Watergate as well as verification of the story for the Washington Post. I suspect he (or his family) was cashing in before it was too late by breaking the story through Vanity Fair for what was probably a good fee.

Naw. CanaDuh has to stick around until at least 2031; that's when they're
scheduling routine medical procedures for people who apply today.

Just as Felt said to them... "Follow the money..."

Once you do that, many things will become clear.

The family has said they wanted to cash in. Woodward and Bernstein (who did quite well from the story) weren't willing to share any of the past or future income with Felt.

So they shopped the story with various publications and publishers. Vanity Fair was the high bidder at a reported $100k.

It's not dead, but I don't know to what extent the inside damage is done.
Like one poster said, how can he be trusted?
He basically lied. He should give me a $25 refund to make things right. I
think I should contact Ebay and leave negative feedback.

Yes he told me his "helper" took the pictures. So let's see, his helper
didn't notice the dent even though it was taken out of a "factory sealed

box" His "helper" said nothing to him about it and just packed it right back up? Who the hell would buy that? Not me. And he needs a "helper" to take the pictures for him?

Not meaning to sound paranoid about the politically controlled newscasts here in the U.S., but can someone recommend a good reliable SW station that provides real, honest to God, true facts and figures newscasts?

It would be great to listen to someone who is without bias, and not trying to achieve their own agenda...

Or are there any stations left?

Thanks.

Mark, I asked him for a $25 adjustment which is fair. The last SL-11a went
for $20.
http://cgi.ebay.com/ws/eBayISAPI.dll?ViewItem&category=58286&item=7517899447&rd=1

and I really trusted this guy too. He turned something easy and nice into an
uneeded hassle. If he was real proper seller, he should refund me the $25
and let me post it here for all to know. This world is turning into crap.

Lucky

Yes the screens are fine. I gave up cigarettes and now smoke a pipe.

I doubt there is any damage to the circuit though you could rotate it in a few directions to see if you hear any rattling. If you don't hear anything and it works, odds are quite good the damage is just cosmetic.

If the damage is worth $25 to you, it probably makes sense to return it for a refund. It's more than half of what you paid for the supply.

I would only leave negative feedback if you are unable to reach an acceptable solution. If you leave a neg, don't expect anything from the guy. He may retaliate and leave you a neg too.

Ditto..

I woould suggest radio Nerw Zealand or radio Australia, but I think
they usually broadcast excerpts from the BBC when they speak on
international subjects.
Good for Pacific Basin stuff

The BBC also has financial news from round the world

Radio China International is a good source for China related news...

I've been a SWLer for at least 20 years, have a Ph.D. in EE, have 20+ years of
experience in the telecomm industry (uwave, sats, cellular, UWB...) and have taught
grad/undergrad comm courses at various U.S. universities.

I agree with another poster that the SW8/R8B sync. detectors are among the best ever incorporated
into SWL gear. My previous comment about sync. doesn't mean that one cannot achieve similar
signall quality without it (e.g., using PBT, but how many portables or low-cost tabletops have PBT
these days?), but the convenience of being able to select sidebands in sync mode is a big plus.

Mark,

An used one went for $20 and I saw another one go for $21. And it's not just the dent. I find his story hard to accept. If it's from a factory new box, why should it be dented in the first place? It shouldn't.

Now if you follow his story, his "helper" took it out of the "new factory sealed box"and didn't notice a thing. You'd have to blind not to see this. It's not a little dent. The side of the PSU is dented all the way in. So his helper didn't notice it and tell him about it? Come on? If that's true he should fire his helper cause he's not helping him. And he wants ME to spend my own money to ship it back to him? So I have to be out more money for a

damaged item he stated was factory new in box?

No I'm completely right. If he doesn't make good on a partial refund or replace the item at NO COST to me, I'll put in complaint with Ebay and Paypal about him,and I'll leave neg feedback like people have told me to do. They say he deserves it. That I shouldn't let him get off easy.

I'm fully in my rights here and will not be taken advantage of. Simple as that. He stated "New in factory sealed box" but he sent me a damaged supply. I wonder if Ebay and Paypal will buy his "helper" excuse.

Then in the future if he has another dispute with someone, they will see he had an incident once before. I will not spend one cent of my money to ship it back. I don't trust this guy. How could anyone here trust him? Let's see if he makes good as an Ebay seller.

"Lucky"? Sure makes one wonder. As much as he/she/it seems to fret perhaps it would have just been better to buy a new one?

Lucky,

Plug the damn thing in and see if it works. If it works, and the dent
is the only blemish on the unit, and you got it for a good price, take
it and enjoy the thing.

Good grief! If you want "brand new in the box," buy from the
manufacturer at full price. Caveat emptor! We all know that nothing
on eBay is what it seems and to expect everything to match the
description is to invite disappointment and disaster.

If you really want to be a bull dog with the thing, be prepared to go
through all sorts of hoops, including legal ones, and to generally
spend most of your waking hours following up on stuff. It's not worth
the effort unless you've paid thousands of dollars.

Your best bet would have been to build your own PS. They are the
easiest things to build and there are plenty of ready-made designs

floating around the net that you could have easily used.

Not trying to chew on your bones, but you're just going to make yourself crazy with this. Besides that, I get the feeling no one in this group cares about eBay too much with the exception of certain persons who post public moanings about prices they think are outrageous. They never buy...they just piss and moan for a hobby.

Regards,

Al in CNMI

You got that right! This is my third out of them in a little over
twenty years. Before Mr. Nyamwocha took over, it was TOUGH! I dunno
what the problem was, maybe just hatred of the job, but they sure
didn't like to respond.

BBC tends to be somewhat on the liberal side, but the depth of their reporting is unmatched by anybody else. And they report stuff that isn't reported or is underreported by US media. If you're solely looking for news about the US that isn't reported in the US, and don't care about bias, Radio Havana is always interesting. They're very radical by US standards in their bias, and their object is to make the US look as bad as possible, but every so often they get a real doozy of a story that US media doesn't pick up on or picks up on a couple days later. They're also good for hearing the Muslim side of the conflicts in the Middle East.

Out of curiosity, is he or anyone he knows or his family a DX'er?
That's what usually results in the complete turn-around of "no-answer"
policies!

He never indicated to me that he was a DX'er, nor did he mention anyone else in his family. Sometimes I think it's just an individual who is interested in hearing from, and responding to, listeners in far off places. Much like we, as DX'ers enjoy writing to, and hearing from far off places.

I wrote the seller another e-mail. The ball is now in his court to settle
this friendly without any other needed problems for both of us. I did my
part. Just remember if it was you who bought a "brand new in factory box"
and was excited about receiving it, only to open the box and find it

damaged. How would you feel??? I could have bought many PSU's for $11, $15 and $20. NONE of this is my fault. All I did was win an auction I thought was one thing but got another.

Like I said, this world is falling apart. There are no morals or feeling left.

Can someone interpret this message, in English ???

--James--

Que Huong Radio, f/d Que Huong Radio & Newspaper card in 17 days for $1 and English report to California address. Also sent a coupon for a local (to CA) Vietnamese restaurant. I'm closer to the real thing! LOL. This is a clandestine broadcasting to VietNam.

I for one will miss them because they were a decent place to pick up parts while at the mall. Having to drive half way across the city was a problem here. they served smaller centers and towns well for many years. Granted not all the staff knew about everything in the store but way back when they sold good radios like the DX 150 and DX 160 they were a great place to get started in the hobby.
We will see how the new Circuit City folks do and if they still remain a good source for parts in the mall or the small towns of Canada.

Yes I am a Canadian and a liberal who believes in social medicine and the Charter of Right and Freedoms we have. So Mr DXass...oops DXace feel free to critic me and the other fellow Canucks here. Just remember this:
As your government turns North America more and more into a prison state we are bigger and on top so watch out.

Good Grief!!! Whine about this just like you whinned about losing that
other auction because the seller sold it to the highest bidder, a jap
guy, instead of you. Is there anything you don't whine about? If things
are so hard on you bidding on ebay why don't you find another avenue to
buy stuff from? Guess you would whine about that as well.
I bet if you were starving in the desert and someone offered you a glass
of water you would bitch if it wasn't in the kind of glass you preferred.

I find the move by Radio Shack HQ in the US to be quite stupid. Radio Shack should have a corporate presence in Canada. I do not know what their thinking might be, but such was completely stupid.

Circuit City in my opinion will not serve the needs of people who have RS products.

It WILL be sad to see the Radio Shack system in Canada go!

Good idea, good lord I sure would hate to sell him something and then
have to listen to his bitching about it.

Oh not for 'Lucky', you see he is one of the habitual whiners that will
complain about the most minor of problems. Hope he isn't married, I
would pity the woman that had to put up with him.

Wasn't it their intention to force out those who are now in control of those stores (at least in name) and re-establish their presence there?

You should have heard him bitch about losing an auction to a fellow in
japan when the seller wouldn't sell the item to him instead of the guy
in japan. You would have thought the world was coming to an end because
he didn't get that radio he wanted.

I noticed this thread and read a few messages, planning to stay out of
it. However, Mark offers some very good advice here. Go to Ham Radio
Outlet, who usually has very reasonable prices, and you'll find it for
$80. You'd probably add shipping on top of that.
http://www.hamradio.com/cgi-bin/uncgi/ase?MAN=Astro&MAX=1000&OPT=on

This is for the SL-11A. Now, his ad mentions RS-11A, but the box reads
SL-11A. Which is it? It appears his only warranty is "Not DOA".

If you're dissatisfied I'd request a full refund and, arrangements
having been made, return it and shut up. (Sorry, but it's true!) If
you think getting it for half what HRO offers it for is a good deal, I'd
live with the slight ding and put it to work.

If it works, don't expect a full refund. You'd probably at least have
to pay shipping one way.

Welcome to the world of EBAY! I could tell you about a package or two I
received from individuals and manufactures, but it wouldn't help.

Just remember the dealers name and don't buy from him any more. If you
feel he really did you wrong leave the bad feedback and suffer the

consequences if he does likewise. Continuing to stir the pot, kettle or cauldron is probably going to do you a LOT more harm than just learning a lesson, chalking it up to experience and moving on. We'll get nowhere living in the past! ;-)

Just my over priced $0.02 worth!

Al

The scope does not go below 10 Hz sweep. I have a simple gen board that can
be pushed to 3 Hz and maybe lower with mods.

I think that 'the "engineer" types from APS/SRP' need to go back to
school. HVDC is used for long haul because the power lines will become
60 Hz antennas if they are long enough. The losses go way up, so the AC
portions of the grid are connected by DC lines with power conversion at
both ends.

http://www.spectrum.ieee.org/WEBONLY/publicfeature/jun99/grid.html
mentions a 3100 MW HVDC feed. Yes, that is 3100 megawatts.

Go to news:sci.electronics.design or news:alt.electrical.engineering
and tell them there is no HV DC in the US power grid.

Tebojockey QSLed the station and got a reply in 17 days and a coupon to a local resterant. It's considered a clandestine operation in Vietnam because it speaks out against their Gov. Heres some more info on the station.

Que Huong Radio or Fatherland Radio:

Organization:
Dai Phat Thanh Qu&#65533; Hu'o'ng, Inc., based in California and founded by Ms. Doan Trang. The firm launched 24-hour Vietnamese broadcasts in San Jose, CA, on KZSJ 1120 AM in 1994. It launched a newspaper in 1996. The short wave programs, according to Trang, "are trying to promote freedom and human rights... in Vietnam."

Location

KWHR, Hawaii. Station purchased airtime via TDP, a frequency broker based in Belgium.

Yep, here:

http://www.radiopower.org/talkradio/

Its worth a listen if you find Democratic wingnuts praising
the eternal goodness of Hillary Clinton a bit of a hoot.

And on the other side, there is WMAL here:
http://www.wmal.com/

Home of Hannity, Rush and the usual Republican loons.

Where they too speak often of Hillary Clinton ;-)

It beats the shit out of Australian political commentary,
espeically if you appreciate the sensationalism of it all.

Lewinski's sweater has already done that.

Amazing what a girl puts away for a rainy day. You don't suppose it was all done for an attempted blackmail by nefarious foreign intelligence services, do you?

You're completely misreading the situation.

Radio Shack in Canada has been independent of Radio Shack/Tandy
in the US since the mid-eighties.

While I'm not sure when Circuit City bought Intertan (which is
the company that's been running Radio Shacks in Canada since
the spin-off) it's been a few years.

This change that has to take place at the end of the month is
a result of a court case. The court case was a reaction to
Intertan being bought by what amounts to a competitor of
Radio Shack.

While things may change, this is a cosmetic change, because
of the court ruling. It does not mark Circuit City taking over
Radio Shack in Canada, it marks the end result of that takeover,
a few years down the line.

Note that this ultimately is not a sudden change. Whether Circuit
City was anticipating this sort of ruling, or was trying to
be independent, fewer and fewer Radio Shack items were available
in Radio Shack stores in Canada. Over the past few years, we've seen
the rise of new housebrands, "Centrios" and "Nexxtech",and a major
introduction of Well Known Brands to the Radio Shack flyers. There was a
time when the only things you could buy at Radio Shack (unless they were one
of those weird franchise stores that were mixed in with a local
repair shop) were Radio Shack brands. Increasingly in recent
years, the only items that were housebrands here in Canada were
the small items. You could get Casio watches, Panasonic hi-fi's, Fuji

cameras, just the sort of thing you could get anywhere else.

Take note that some years back, I think it might have been 2001, Radio Shack was clearing out the parts. I noticed one of the stores near here was selling them at a "buy 1, get 2 free" deal. At first, I thought it might be specific stores, but they parts disappeared from the flyers too. I've not seen a catalog in years, though I have no idea whether they've still been publishing them. The parts did return slowly, though maybe not in as higha quantity and maybe the stores were selective about whether they'd carry parts.

The fact that Radio Shack can no longer call itself Radio Shack is just that. They've had time to change, they've done some changing, and there may be changes still. But this name change is not a signal of a completely different path, because the company turned onto that path some years back.

Anything "good" about Radio Shack....??

YOU HAVE GOT TO BE JOKING RIGHT....??

Radio Shack ceased to be a genuine electronics retail
outlet in the late 80's. (some would argue the mid-70's!)

For all intensive purposes, there is NO DIFFERENCE WHATSOEVER
between Circuit City and Radio Shack for the past several Years.

Both of them sell cheap China made consumer electronics
products of generally questionable quality. In other words
both of them SELL CRAP and JUNK, and I for one will
not miss one or the other in the future. Phoooey on both of em !

>
> RK
>
But it seems you are mixing apples and oranges.

Sync detection means a locally generated "carrier" is present, so
if the signal fades the lack of a strong carrier is not a factor.

It does nothing to prevent fading (which I bring up because someone
recently said something along those lines here) it merely helps when
the signal fades.

Selectable sideband really has nothing to do with synchronous
detection, other than that using the phasing method it's relatively
cheap to implement compared to an expensive IF filter. It's not
really like a few extra parts to a synchronous detector will
add selective sideband, the added parts may be cheap but it adds
complication to the circuit.

When Webb wrote about the synchronous detector in CQ Magazine
about it, it was the whole shebang. But, that was a time
when many receivers had fairly wide IF filters, and lacked
product detectors. At the same time, you'd see SSB adaptors
that used the phasing method, which added that product
detector and reduced the unwanted sideband. Adding
synchronous circuitry to those was relatively simple, so once
you added the sync circuitry you not only got DSBsc reception,
but better SSB reception.

What we often see is lower end receivers tossing it in (because
the phasing method is a cheap way of knocking out the unwanted

sideband, and plus there are ICs that do it all in one package), but it doesn't make up for the lack of a narrow IF filter with steep sides (at least not as implemented in those cheap receivers). It's a means of adding something without a major cost increase.

I'm not even sure where we've veered off to. I thought the previous comment was something like synchronous detection wasn't all that important. I'd say that's true, given that people lived without it till it became a feature in relatively recent years. Someone listening to broadcast radio (am or shortwave) that are relatively strong may be the ones to benefit the most, because you can get deep fades where the sidebands are still nice and strong. Signals that you have to strain to hear, it's far less likely to be useful, because they are already below a minimum strength. You'd want to pull in other techniques at that point, and that includes the narrow IF filter that has good slopes.

I wish that all of them would get the heck back
to 14.313 and 75 Meters. There ain't been a
really funny ham radio freq since RH busted up
the original 14.313 and 3.894.5 some Years ago.

Ham radio needs a DEDICATED HF COMEDY CHANNEL
on 20 and 75 Meters once again, to provide us all (ham and SWL
alike) with some good quality LIVE ENTERTAINMENT once again.

Heck...some of the keyclowns in rec.radio.amateur.policy would make
for great on-the-air personalities and "Dayton Celebrities" just like ole
Herbie, Porkbutt, Polly and the rest of em were Years ago if they'd
just get off Usenet and back on live radio once again!

Shoot, I can recall when Herb showed up at Dayton one year with
a few of the other Original 14.313 Clowns and hams were actually
lining up to get his autograph (!!). Now that's Ham Celebrity Status!

How about it boys? The stage is empty and you're just a PTT switch away
from ham radio stardom, unless you want to sit here and whack-off
to usenet postings like a couple of nerds !!

Who cares right now. It's really hot here, and that means
we are likely to see increased activity on the FM band. I realize
that is different from listening on the FM band, but it was wonderful
a few years back when I heard an Mississippi station here in Montreal.
I'd just woken up, it was July, and it was steaming hot.

This news group has more than it's share of Ph.D.'s and double E's it
seems.

Where do you think the future of telecom is going? Is it going to be
mostly fiber-optic or do you think RF for the last mile to the home or
business?

Do you think Ethernet is winning over ATM?

I knew that the name Que Huong sounded familiar. I must have passed by
the restaurant on one of my trips to San Jose during the dot.com era.

Yeah, most of the "news" in the US is fake. Doesn't matter what the
political leanings are of the reporters.

There might be some DC transmission lines in the US. Electrical power in
the US is a checkerboard of mostly privately owned utility corporations
(although there are a few public ones, like SMUD in Sacramento, CA).
These corporations, not the government, decide what to build. In other
parts of the world the situation can be even more chaotic. In Europe the
electrical power was a mishmash of 120 and 220-230 vAC systems,
sometimes changing from block to block. For some reason this situation
wasn't corrected after WW2, when almost the entire continent had to be
rebuilt, but continued until the mid 1970s. If you look at the back of
any 1950s European tube radio, you'll find a switchable transformer that

could be changed from 120 or so to 220 or so with the turn of a knob. Today, voltage in Europe is 50 hz, and is usually 230 on the Continent and 240 in the British Isles. I'd love to get my hands on a 1950s German tube radio from Germany or Spain (the two countries have the same type outlet plug), you know the ones that have the front dials all in German. I looked into buying one off ebay.de or ebay.es, but even in the days when the euro was pretty much a 1 for 1 swap with the dollar shipping from Spain to the US for one of those monsters was too expensive to be feasible. I hate to think how much it would cost at 1.30 euros to the dollar. Every so often you'll find one that a US soldier bought in Germany and brought home with him when his tour ended, but those have usually been electrically bastardized to the point that they're unsafe to operate.

340. Freeplay Lifeline

Newsgroup: rec.radio.shortwave
Date: 2005-06-03 03:41:53 UTC
From: running dogg <run@ning.dog>
Message-ID: <429fd268$1_1@spool9-west.superfeed.net>
Source record: 23773

I recieved something that I ordered over the net from C. Crane, and was flipping through the catalog they included when I noticed, on page 25, a Freeplay Lifeline radio. It says that this radio is made for humanitarian projects in the third world and is sold to Americans exclusively by C. Crane. It appears to be a four band radio, with FM, AM, and two SW bands covering 3.5-10 and 10-18 Mhz. The ad has a picture of an African boy working in a field while listening to this radio, but that radio appears to be different-it has a red and white dial instead of a blue and white dial. I was wondering if anybody owns a Freeplay Lifeline and can comment on it. I assume that the SW bands are good only for regional reception, so in the US you'd only hear bible thumpers. At $99.95 it's quite expensive, I don't see how they can afford to give them away to people in Africa. Page 78 of the catalog shows a Rwandan girl with a Lifeline, and it IS different-the dial is marked with the Voice of America logo.

I really do not understand this attitude toward synchronous detection. It's the best thing to happen to AM reception in years. I have it in my radios at home and wish I had it my car radio. Maybe it's that I live on the coast that the selective fading is more problematic but SW anytime or night time AM broadcast reception is greatly improved on weak and strong signals alike.

The choice of double side band of single is an additional plus that I would not minimize either. One side band of an AM signal can have have interference on it and not the other. Often passband tuning takes care of it but not always. Take the situation of a digital mode signal near an AM broadcast and the passband tuning will get rid of most but not all the digital mode interference. Using synchronous selective side band detection is much more effective.

You can count me as one that would not want to live without it.

Do you own radios with synchronous detection? Try operating one with sync on and another with sync off. Spend some hours listening to night time AM or SW and then come back and tell us which you prefer.

I have no idea, but when the Baygen first came out, much was said
about how it was invented for the African market, and the radios
were then also sold to Europe and North America at a greater price
to help fund the African project. It's expensive here, given the
relatively crummy radio (the real hook is the windup generator)
because the profits are paying for the production of the radios
for the intended end users, the Africans.

Inductance of a wire or coil is independent of frequency. You are
confusing it with reactance. Specifically in this case inductive
reactance.

Inductance and capacitance are physical characteristics of a device like
height or width.

If you stimulate a device with a time varying voltage it will react to
it resulting in a value of impedance depending on the frequency of the
changing voltage.

> However, all 200kv and up lines that traverse Arizona are AC only.

This site claims that there may be a few MILLION volt DC lines going to Arizona.
Look at the DATES shown here. I'd check the credentials of your engineer friends.

==========
Four major transmission lines and several shorter interconnecting lines comprise the full intertie. Two of the extra high voltage (EHV) lines will transmit direct current (d.c.). The constructed 800-kilovolt (kV) d-c line interconnects the northern converter station at Celilo, Oregon, with the Sylmar Terminal Station near Los Angeles, California. This line was energized in 1968. A proposed 1,000-kV d-c transmission line will interconnect the Celilo Converter Station with a southern converter station near Phoenix, Arizona.

The two constructed 500-kV alternating current (a-c) transmission lines were placed in service in late 1960. These two a-c lines extend from the John Day Substation on the Columbia River near The Dalles, Oregon, to the Lugo Substation in southern California.

A 345-kV a-c line and associated facilities were constructed from the Mead Substation near Hoover Dam to the Liberty Substation near Phoenix, with a connecting 230-kV a-c line to Pinnacle Peak Substation north of Phoenix. These facilities were placed in service in 1968.

In 1967, contracts were awarded for construction of the Mead Substation and installation of two d-c terminals. Surveys and right-of-way acquisitions were completed for The Dalles-Hoover Intertie. In 1969, construction of this intertie was postponed.

Don't miss the point that even in NA that radio will work without
batteries when the power goes out. It a good emergency radio, which is
how they are marketed here.

Really? I wish instead they would just report the news straightforward
so that I know what is happening out there.

Perhaps David is omniscient, already knows all the facts, and therefore
all he wants out of the nightly newscasts are cheap vaudeville skits.
Like Dan Rather presenting obviously false documents written with
proportional fonts supposedly on 1970's typewriters.

Courage !!!

Michael:

Yes, the radio, in my opinion, is worth about 19.99... and only for the reason that an asteroid might strike the planet and there would be no batteries left--however, there would probably not be any multi-kilowatt sw stations left either....

Warmest regards,
John

>Do you think Ethernet is winning over ATM?

Ermmmm...ATM (asynchronous transfer mode) is a 53-byte packet
protocol that travels OVER ethernet (a method of transferring data
over coax cable - and wire pairs.). See IEEE standard 802.3.
Ethernet is the most widely installed local area network technology.
The most commonly installed Ethernet systems are called 10BASE-T,
providing transmission speeds up to 10 Mbps. Fast Ethernet LANs,
100BASE-T, provide transmission speeds up to 100 Mbps.

ATM is a dedicated-connection switching technology that organizes
digital data into 53-byte cell units and transmits them over a
physical medium using digital signal technology. Individually, a cell
is processed asynchronously relative to other related cells and is
queued before being multiplexed over the transmission path. Because
ATM is designed to be easily implemented by hardware (rather than
software), faster processing and switching speeds are possible. The
prespecified bit rates are either 155.520 Mbps or 622.080 Mbps. Speeds
on ATM networks can reach 10 Gbps.

I have to say, from a personal instead of an engineering standpoint
(yes, I'm a EE too - but only a Bachelor's), I love the sync mode I

have available to me.

I use a Sony ICF-2001D (yeah, I know, museum piece...) and the sync detection allows me to dig stuff out of the dirt as well as clear off some splatter and clutter. It makes for easy ID of stations that always seemed to elude me. My ears are old and I am a little deaf (military time), so it's a godsend to me. Audio filtering and headphones just cannot do what sync detection does as far as locking onto a sideband.

Now, I can't switch select the sideband, but what I *can* do it tune off +/- 100 Hz until the detector locks onto the sideband that I desire.

In the past, IBB/VoA has given away receivers so our targets can hear
our signals. We're not the only ones to do this. In the early days
of the FEBC in the Philippines, they had an electronic shop wherein
they manufactured nice wood-grain AM receivers locked onto their AM
frequency. God loves a captured audience.... LOL

I suppose ATM could be stuffed into a ethernet frame but I have not
heard of it. In the telecom world it's ATM over SONET that terminates
at my DSL modem. The DSL modem is used as a bridge. Between my DSL
modem to the computer it's ethernet so I can use the usual routers and
or hubs.

It can go over any of the SONET rates.

Maybe I should have been more specific. The question is whether
ethernet will take over the local metro area from ATM over SONET. I
expect that ATM over SONET will be maintained at higher levels in the
network.

I think you are onto something here regarding the quick hit, i.e. closed loop step response. Use one of those RF detecting scope probes or just look at the envelope detector.If the envelope is ringing, you need more delay. The step can be off to on for attack and on to off for decay. It seems to me it not a matter of what you want, but rather what is stable.

If he's not willing to make a price adjustment you feel is fair, you
should be able to return it for a no cost exchange (if he has another)
or a refund including return shipping...

BUT...

The tone of the messages you've posted in RRS about this problem implies
you've had limited experience with conflict resolution.

If the messages you send him imply "I'm ready for a fight" you increase the odds he'll get ready for one too.

I would treat the fact he didn't look it over before listing it as an honest mistake - he wasn't the only person in this transaction who expected a new in box item to be dent free.

He has feedback of 183 without any neutral or negative comments. 120 of those comments are from buyers.

My guess is the helper was just told "Take pictures of everything in those boxes over there".

If you are friendly but firm and give him a graceful way to make you happy, he'll probably take it.

If it was me, I'd send a much friendlier email explaining I cooled down and after considering his excellent reputation decided it was an honest mistake. I'd apologize for the tone of the earlier message(s), and give him a list of ways he could make me happy with the transaction and earn glowing positive feedback.

Good luck.

Mark

Seems that's all anyone does in CanaDuh... rest.

Lot's of 'talk', and even more rest. Think Rwanda... left your 'tard boy out to dry, did you not?

A totally worthless lot, in my opinion.

Bottom line is, based upon the luck you've had of late, and perhaps for a long time, you are no longer "Lucky".

Perhaps a change of moniker might turn things around for you.

368. Impeach Bush, Cheney for lying and murder

Administration's offenses impeachable
Thursday, June 02, 2005 - Bangor Daily News

Let's consider an item from the news of about two weeks ago:

A British citizen leaked a memo to London's Sunday Times. The memo was of the written account of a meeting that a man named Richard Dearlove had with the Bush administration in July 2002. Dearlove was the head of the England's MI-6, the equivalent of the CIA. On July 23, 2002, Dearlove briefed Tony Blair about the meeting. He said that Bush was determined to attack Iraq. He said that Bush knew that U.S. intelligence had no evidence of weapons of mass destruction in Iraq and no links to foreign terrorists, that there was no imminent danger to the U.S. from Iraq. But, since Bush was determined to go to war, "Intelligence and facts are being fixed around the policy." "Fixed" means faked, manufactured, conjured, hyped - the product of whole cloth fabrication.

So we got aluminum tubes, mushroom clouds imported from Niger, biological weapons labs in weather trucks, fear and trembling, the phony ultimatums to Saddam Hussein to turn over the weapons he didn't have and thus couldn't. We got the call to arms, the stifling of dissent, the parade of retired generals strategizing on the "news" shows, with us or against us, flags in the lapel, a craven media afraid to look for a truth that might disturb their corporate owners who would profit from the war. Shock and Awe. Fallujah. Abu Ghraib.

It was all a lie. Many of us have said for a long time it was a lie. But here it is in black and white: Lies from a president who has taken a sacred trust to uphold the Constitution of the United States.

So, what does it mean? It means that our president and all of his administration are war criminals. It's as simple as that. They lied to the American people, have killed and injured and traumatized thousands of American men and women doing their patriotic duty, killed at least 100,000 Iraqi civilians, destroyed Iraq's infrastructure and poisoned its environment, squandered billions and billions of our tax dollars, made a mockery of American integrity in the world, changed the course of history, tortured Iraqi prisoners, and bound us intractably to an insane situation that they have no idea how to fix because they had no plan, but greed and empire, in the first place.

What does it mean? It means that everyone in this administration should be impeached. It means that our Maine Sens. Olympia Snowe and Susan Collins and our Congressmen Tom Allen and Mike Michaud should call for immediate impeachment. They were lied to by their president,

voted for war, and are thus complicit in the multiply betrayals of the American people unless they stand up now for the truth.

Richard Nixon was impeached for a cover-up of a two-bit break-in. William Cohen, a young Maine Republican, played an important role for the prosecution in those proceedings. Bill Clinton was impeached for lying about sex with an intern. Now we have the irrefutable evidence that George W. Bush lied about the reasons for taking the United States to war. The intelligence wasn't flawed. The weapons weren't hidden. Our elected leaders were lying.

Democracy, like any sound relationship between people, is built on trust. We trust our leaders to tell the truth so that the consent that we give them is honestly informed. If the consent is won through manipulation, propaganda, fear, or lies, the basis of our democracy has been subverted. It is no longer democracy at all, but we continue to call it that because we have not the courage or stamina to demand its overhaul.

We live a lie when we fail to hold leaders accountable for their lies. By not calling now for impeachment, we are saying that we condone hypocrisy, pseudo-democracy, and murdering thousands of Americans and Iraqis for strategic control of energy resources that we have no right to. Patriotism demands that we insist on the ideals of democracy, not that we support the "leaders" who cynically destroy them.

What's curious is why anyone like me should have to even point this out. Don't our senators and congressmen feel betrayed? Are they content to continue the murdering rather than do what truth demands? Do they think they can lie to history, too. Do they think that this little Iraq problem will somehow just go away, that the courageous resistance to the United States occupation will give up and hand Bush the keys to the oil wells? Do they think that any of the grave crises facing the world now - energy consumption, global warming, species extinction - can be solved by lying about them?

We are living in an age of no accountability. It's also an age upon which may hang the survival of human life on this earth. One should not bet one's future on people who abjure responsibility. The first courageous step is to come to terms with what we know is true: America's president lied to America's people to create an unnecessary war. I ask Sens. Snowe and Collins, Reps. Allen and Michaud to take that step. Begin impeachment proceedings. It's really no more or less than their duty. It's also the first step toward restoring America's integrity.

John, certainly you've been alive and conscious the last four years, haven't you? Weren't you around during the run-up to the war? Didn't you witness the events that are recited in the article?

I don't understand why you would need independent "proof" of things that you have witnessed yourself. Which allegations of fact are you questioning?

I also recommend that you try Radio Havana, but also try Rush Limbaugh, Air America, Drudge, CNN, Focus on the Family, C-Span, NY Times, your local newspaper, and as many other sources you can find. And then take all that information, and compile it into your own version of the truth. Each of us is responsible for our own destiny, and so each of us must be responsible for our own version of the truth.

<snipped it all>

I don't think it's credible to believe President Bush said something like "We've got nothing, but we're gonna go into Iraq and kick his butt anyway" to Richard Dearlove.

Find a similar statement from someone like Colin Powell or Dr. Rice and the op-ed article you posted might be onto something.

As for the author (Robert Shetterly) - the following is the first sentence from the "artist's statement" on a web site promoting his work:

"The second strong feeling --- the first being horror --- I had on September 11 was hope, hope that the United States would use the shock of this tragedy to reassess our economic, environmental, and military strategies in relation to the other countries and peoples of the world. "

Reading about the "Americans Who Tell The Truth" curriculum he hopes to get into our schools, it appears many of his heroes are socialists.

I think it's worth some calls to my friends on the school board to warn them about his program.

Brian:

I am aware of a bunch of activists who have been running around repeating the same things for a long length of time--I hardly find that "proof." If you mean do I think there are muslims who would blow up our trade center... well, not before they did it... if you mean do I make a difference between muslims who fund them, and the ones actually carrying out the plans--I don't... if you mean do I think the "bible" they follow demands the enslavement of anyone not following their religion, or death if they refuse to follow the religion--I do...
Now, there is either credible proof that the memo exists and says what it is purported to say AND is not as forged as Dan Rathers' "proof", or there is not--and where is this proof so I can see it and who is making the claim(s)...

... end of story...

John

dxTard is playing dumb to discredit the whole article.

Mushroom cloud is a result from Uranium

"the British government has learned that Saddam Hussein recently sought significant
quantities of uranium from Africa."

As explained the the Proven Fake Niger Document.

See even Liar Rice gets it.

"The problem here is that there will always be some uncertainty
about how quickly he can acquire nuclear weapons.
But we don't want the smoking gun to be a mushroom cloud."
-Condoleezza Rice

Extremely problematic or not, some power companies convert DC in the hundreds of kilovolts to AC. I suppose they're using something better than dynamotors.

> also, ohms law (in case of DC circuits)
> would dictate that the losses would climb exponentially given distance on
a
> conductor (most of the US power grid is either steel or aluminum cabled).

Wait a minute! Doesn't ohm's law also apply to AC? As I understand it, AC ought to meet a higher resistance than DC due to the skin effect. Sure, the skin effect doesn't mean anything for a typical speaker wire, but the skin effect will make a difference with very thick conductors over hundreds of miles. Not to mention the additional resistive power losses if the transmission line has standing waves on it.

You might want to be careful of what you hear from your engineer "friends". They may be the type who like to play cruel jokes.

From Globe and Mail Artciles
Electronics chains retune for competition

By MARINA STRAUSS

RETAILING REPORTER

Thursday, May 26, 2005

Canada's hotly competitive consumer electronics retailing business is bracing for more static as two major U.S. players battle over the RadioShack name and an array of merchants set their sights on snatching a bigger piece of the techno-action.

The retailers are grappling with plummeting prices and tighter profit margins as the technological life cycles of many new products keep shrinking, even as demand for high-definition televisions and all things digital continues to climb.

==========

RadioShack forming Canadian subsidiary

RadioShack forms subsidiary

Friday, May 6, 2005 Updated at 3:28 PM EDT

Globe and Mail Update

RadioShack Corp. of Fort Worth, Texas, has announced it is forming a Canadian subsidiary to oversee the expansion of its chain of specialty consumer electronics stores in Canada as part of the company's planned North American expansion strategy.

The announcement comes on the heels of a March court ruling in favour of RadioShack voiding a licensing agreement by InterTan Canada Ltd, which is now owned by Circuit City. The ruling prohibits Circuit City from using the RadioShack name in Canada or sub-licensing the RadioShack name to its independent dealers past June. As such, Circuit City announced last week it is relinquishing the RadioShack name at almost 900 stores in Canada in favour of a new, untested brand.

The company says its has been exploring several options in Canada since winning its lawsuit against InterTan and Circuit City, and expects to have upward of 20 to 30 company-owned stores operating in Canada by the end of the year, and that most of those will be in the Toronto area. The company is also extending offers to existing independent Canadian RadioShack dealers who wish to continue operating under the company's brand name and infrastructure after June.

For its part, Circuit City Stores, Inc. of Richmond, Va., issued a statement and clarification to the news release issued by RadioShack.

Advertisements

Circuit City said it does has not relinquished its rights to the exclusive use of the RadioShack brand in Canada until 2009.

"The Texas district court has only issued a partial ruling on the legal issues between InterTAN and RadioShack," InterTAN CEO Brian E. Levy said in a statement. "Once a final ruling is issued by the court, Circuit City and its InterTAN subsidiary fully intend to appeal to protect our rights under the Licence Agreement and for exclusive use of the RadioShack brand in Canada until 2009.

"While we are disappointed by RadioShack's hostility and their legal manoeuvres, we are focusing our efforts on offering Canadian consumers and our dealers an even broader range of products and more attractive value at The Source by Circuit City," he said.

> it is purported to say AND is not as forged as Dan Rathers' "proof", or
> there is not--and where is this proof so I can see it and who is making
> the claim(s)...

John, what I'm referring to is this particular paragraph of the original post:

"So we got aluminum tubes, mushroom clouds imported from Niger, biological weapons labs in weather trucks, fear and trembling, the phony ultimatums to Saddam Hussein to turn over the weapons he didn't have and thus couldn't. We got the call to arms, the stifling of dissent, the parade of retired generals strategizing on the "news" shows, with us or against us, flags in the lapel, a craven media afraid to look for a truth that might disturb their corporate owners who would profit from the war. Shock and Awe. Fallujah. Abu Ghraib."

This pretty well sums up the run-up to the war, in my direct recollection of those events. These were later confirmed, to one extent or another, particularly the non-existence of the "WMD." I was extremely skeptical of all of it, until Colin Powell made the case that day in his public address. I admire Colin Powell, and I trusted him. He made the case for me. We later learned that he himself felt very differently, and that he was simply being a good soldier and making the case on behalf of his commander -- his departure from the cabinet later was either his "reward" from Bush or the result of his conscience getting the best of him. I still think Powell's an honorable man. In any event, I found all of the rest of the war-hype-machine to be thoroughly unconvincing. You may disagree with the writer's conclusions, but when you compare what happened in Iraq with what happened in the Watergate, there are several magnitudes of difference in seriousness.

May 27, 2005

Dear Friend:

As many of you are aware, a classified memo was recently disclosed in Great Britain that I believe has serious ramifications for the integrity of the United States Government. Dubbed the ï¿½Downing Street Memo,ï¿½ but actually comprising the minutes of a meeting of Prime Minister Tony Blair and other top British government officials, the memo casts serious doubt on many of the contentions of the Bush Administration in the lead up to the Iraq war. With over 1,600 U.S. servicemen and servicewomen killed in Iraq, the deaths of hundreds of thousands of Iraqis, and over $200 billion in taxpayer funds going to this war effort, we cannot afford to stand by any longer.

Along with 88 of my colleagues, I wrote to the President requesting answers about this grave matter. Thus far, our search for the truth has been stonewalled and I need your help. I believe the American people deserve answers about this matter and should demand directly that the President tell the truth about the memo. To that end, I am asking you to sign on to a letter to the President requesting he answer the questions posed to him by 89 Members of Congress.

I will personally insure that this letter is delivered to the White House.

You can read the letter here and sign on to it below. You and I know the White House is just hoping that this matter will fade away, but in a few short weeks, with our steadfastness, the memo has found its way into leading newspapers and White House press briefings. With your help, we can hold this Administration accountable.

Please pass on this important letter to your friends and colleagues, and ask them to sign as well.

Thank you for your help and support.

John Conyers, Jr.

I remember seeing an article somewhere about receivers Philips made for
an educational radio station in Colombia. The radios had five channels,
each set to an AM or SW frequency of the station, and that's all they
could get, although you could tune a little to either side by turning a
screw inside the radio. Philips saved a few of these radios in their
warehouse in the Netherlands, and when they sold off the contents of the
warehouse a while back a radio collector from America got one of these
Colombian radios and wrote an article on it. It's unknown if any survive
in Colombia, but it's unlikely considering they were made 40 years ago.

I have a first generation Freeplay S360, one of the ones that used the actual Bayliss Generator, and I was underwhelmed with its performance. It requires a LOT of cranking (66 turns of the crank two or three times) in order to get 15 or 30 minutes (can't remember exactly) of playing time, and the reception is crummy-local stations only, although you can hear some AM skywave at night. But I suppose that if you lived in the jungles or bush of Africa and had no access to batteries that it would be a godsend. Batteries are very expensive in the non Western world, and hard to get too-that's why Degen radios come with rechargeable batteries, even in China batteries are costly and scarce. In Africa most

people live on less than $1 a day, so paying for batteries is out of the question. The C. Crane catalog does mention that for every Freeplay Lifeline purchased in America the company donates one of the VOA Lifelines to Africa.

Brian:

So, according to you, taking Afghanistan (a poor country which obliviously wasn't in a position of financing attacks against us) cured the problem of our large buildings suddenly disappearing and the death of the thousands--and we would have never had another fear?

Or, you really are devoted to protecting Americans at all costs--frankly, I'd be a bit leery about trusting you with my life and safety--I want to be right out front here--stand beside bush or Powell and I'll pick them as my protector EVERY TIME! (and, I think I could really do much better than them--I just didn't have a better choice this last election...)

Warmest regards,
John

394. Re: Best unbiased SW REAL newscasts?

Newsgroup: rec.radio.shortwave
Date: 2005-06-03 17:00:59 UTC
From: JLewis <john_stlmo@yahoo.com>
Message-ID: <110oe.5431$K66.3454@fe02.lga>
Source record: 23927

Thanks guys,

Although I would hardly call the BBC "agenda free" - and certainly not Cuba.

I guess the answer to my question is - there are none...kinda what I thought...

Sad.

395. Need callsign help

Newsgroup: rec.radio.shortwave
Date: 2005-06-03 17:12:13 UTC
From: sparky@whatever.org
Message-ID: <42a08ed2.6795769@news.4d.net>
Source record: 23928

Back in the early '50s the French Foreign Legion was fighting in what was then known as Indo-China. They had network that used callsigns starting with TTx - some I can recall are TTA, TTN, And TTV, but memory has faded as to relating a location to call sign.

Does anyone have older call sign lists that might help with this?

The control station was FLZ and the network used CW, if that helps?

Thanks,

396. Need help with Call sign

Newsgroup: rec.radio.shortwave
Date: 2005-06-03 17:20:40 UTC
From: sparky@whatever.org
Message-ID: <42a08d99.6482066@news.4d.net>
Source record: 23929

Back in the early '50s, the French Foreign Legion was fighting in what was then known as Indo-China. They had a network or radio stations that used calls starting with "TT(x)" Some I can recall are: TTN, TTA, and TTV but after all these years can no longer fit location to callsign.

The net control station, at Saigon, used FLZ and I believe he contacted about a dozen outstations - all on CW.

Does anyone have call sign books from that era that might help me fit these calls to locations?

Any help welcome.

Thanks,

Sparky

If you get your news from corporate media you will quickly become
insane. The BBC gets the facts right. Learn to listen past their
sarcastic tones of voice. I like WRN on Sirius.

According to me? I never said any of that. If you detected hostility in my original response, John, I didn't intend that. David has gotten himself quite a reputation around here, but what I'm saying is, don't throw out the baby with the bath. If you'll notice, the ones that attack David the most forcefully around here are the squirreliest, hard-core right-wing nut cases, but you don't have to be one of them to disagree with David -- just as finding some truth in what David says does not make you a squirrely, hard-core left-wing nut case.

> Or, you really are devoted to protecting Americans at all

I disagree.

First, when the UK gets a little too deep into some exercise of
imperial colonialist nostalgia, they follow the government line.
(After all, the Foreign Office pays their bills).

Second, they're too prone to go to the progaganda sections of
the US Republican Noise Machine for "balance". They'll get some
mouthpiece from Cato, American Enterprise, Heritage, etc to
"get another viewpoint". That's one of the main purposes of those
outfits, to make some ideological whack job idea seem mainstream.
They're as balanced as Radio Havana, on the other side.

My favorite is the weekly programs from Radio Australia, "Background
Briefing", "Media Report", "Law Report", "Correspondent's Report".
(They are biased a bit to the left, but then so am I). They're also
the sort of in depth investigative stuff that a US listener can only
dream about.

Bush? Protector? Good one.

First of all, are you a woman? Why the fuck do you need some
pantywaist politician to ''protect'' you.

Second; protect you from what? Crazies with box cutters? How the
fuck can anyone in a free country do that?

Third; the Bushies are using fear to get you to give them free reign
to plunder this country top to bottom. The fact that you play along
makes you a coward and a traitor.

You're a weird guy, David. You fit in well with typical political discourse these days -- all the issues are framed by the extreme fringes, polar opposites standing at either end of the political spectrum, screaming at each other, calling names, not hearing each other at all, and in the end, no good comes of it.

The part of John's post I agreed with was the part in parentheses, I should have snipped a little more.

And, it's "free rein," not "free reign."

well, its apparently not done that way here in Az. every major line in the .1 to 1 Mvolt range here has a lot of crackle and hum in the HF spectrum. Believe me, if you stand underneath them, you can hear the snapping and the buzz.

also, in this day of "bottom lining" things, one would think they would use AC because of the lower expense of the equipment (DC to AC conversion equipment for .1 Mvolt and up is very expensive).

>

I remember that.... Yeah, canada uses a DC Transmission scheme. However, DC has its own problems (such as induced voltages on the line during solar storms and the like).

I guess what it comes down to is what works best for a given application. .

I am forwarding this thread to a couple of folks I know and let them pick it over and see what they think. I am, by no means, an expert in this particular area. most of what I know is based on experiences in the field.

ok, judging by the link provided, the information seems to point to the fact
that this is a relatively new thing for the US. Always helpful to have new
info.

thanks.

an interesting point, granted. However, one would think that parallel lines
would have to be treated as a "transmission line" (such as open wire feed).
those normally do not radiate very far (if al all). The assumption that it
is an antenna is only indicative if there is a single line and that earth
ground is the return path.

meanwhile, its becoming increasingly irrelevant as there may be a need.
still, I have to wonder, at DC voltages, there is still ohms law to
consider.

understood that. Arizona is no exception. we have 2 major power providers
here (APS and SRP) and a half dozen or so smaller independents that cover
places in Arizona where the big boys won't go (cost consideration).

man,
I wouldn't mind having one of those, if even to restore to original
operating condition. Building a power converter (outboard) would be simple
for such a project. :)

I remember my first tube rig. it was an old Hallicrafters sx series radio.
it had a nice receiver in it fo4r AM and ssb. It didn't cover all of the SW
bands, but what was available sure sounded a lot better than most of the
newer solid state stuff. That radio was given me by my grandfather when I
was about 8 or 9. One wouldn't think tube radios were still around in the
mid 1970's, but they were. :)

Meanwhile, I think this discussion has gone about as far as its going to go.

consider the financial climate of the last 20 years or so.
DCHV systems are inherently far more expensive to build now than they were
then.

Given the current financial climate, the utilities are building as cheaply
as possible..

btw, if memory serves, lake mead power generating was primarily for Las
Vegas and LA..

For the most part, you post others' views, not your own. I usually get a kick out of the reactions they generate.

But, see, the bit about "What are you, a woman?" "What the fuck..." "You are a coward and a traitor..." That's not called for, and it sure doesn't polish your image. Jumping to conclusions and childish name-calling is not a "Jeffersonian" quality.

> skin effect will make a difference with very thick conductors over
> hundreds of
> miles. Not to mention the additional resistive power losses if the
> transmission line has standing waves on it.

there is some extra math involved. ohms law is pretty good for simple
circuits (pure resistances, etc). given the conductance of a type of wire,
one can know its resistance per foot and calculate the loss over distance.

with AC, this gets a little more problematic as you also have to apply
capacitive and inductive reactances and the overall impedance of the line
(in the case of HV transmission lines, they appear to be open-wire lines
that would not radiate if properly balanced). Also, someone else mentioned
wavelength in this discussion. it too has a bearing (thank you for the
reminder!). In the case of the AC transmission lines, I *think* the

relevant transmission line theory that applies is the open-wire line model.

basically, its a lot of material I would have to review. I haven't done any hard-core engineering studies in almost 15 years and have forgotten more than I should. :(

>
> You might want to be careful of what you hear from your engineer
> "friends". They may be the type who like to play cruel jokes.

that possibility has occurred, but one would think that such folks would be professional, especially where their jobs are concerned (don't you think?).

Dave,

I couldn't agree with you more. Here we have an administration that sends troops all the way to Iraq to die to protect us from terrorism, but right here at home he leaves the border WIDE OPEN. These soldiers should refuse to comply with orders since they are being made fools of.

Are these soldiers wives, children, parents and family protected from terrorists right here at home while they die for oil for corporations and Bush/Cheney? No they are not. ANYONE can waltz in and set off a dirty bomb, blow up a nuclear plant or worse.

Now bush won't do a thing to the border till tradegy hits and some poor famlies die first. That's the problem. Why can't it be Bush, his wife and his daughters who get attacked first and not innocent families?

When something happens bush and cheney plus their families will hide like the rats they are in underground safehouses while some poor people get murdered so he can get the "Latin" vote.

Bush and Cheney are not such big shots when it comes to North Korea and Iran. They are scared of them. It's not like walking into Iraq and fighting a ragtag army for their oil resources. North Korea will send a nuke up Bush's ass and he knows it.

Plus bush seems to care more about illegal Mexicans then he does his own American citizens. They can trespass here illegally, get FREE medical care, Medicade, welfare for their kids, housing,
ruin hospitals and cause them to shut down, and make up 30% of our prison population. Who pays for all this? Honest hard working Americans. Not people like dxace or the other morons in here.

Do you know if a convict needs a organ transplant and he's on the list, he's get one before an American citizen does?
So yes, some illegal convict will get a heart, kidney or liver before one of us G-D forbids ever needs one. Plus we have to house them, feed them, supply TV and entertainment for them and give them RIGHTS soldiers died for us to have.

Who pays fro all this? WE DO. YOU DO. The feds {bush cheney and his boys} won't reimburse states for their losses due to these trespassers. Who foots the bill for all of this? We do. The legal citizens of this country. They suck blood from our veins while the smart rich get off with his "tax relief" for them.

These illegals cost us 68 billion towards the deficit every single year and growing.
They form gangs, take over the streets and push drugs and kill people. Some of these illegal convicts have been kicked out of the country 5 or 6 times already but they waltz back in to party here again. All cause bush won't close our borders. This is a disgrace. A slap in the face to every citizen in this country.

Like one poor taxi driver said on the radio. These illegals are killing me. They drive illegal gypsy cabs, charge 1/2 the price and I get no business. I can't support my family anymore. American construction workers are turned away but they hire the illegals instead.

Plus these people "pro create" like crazy.
They have 3, 4 and 5 children. They don't care if they can afford it or not cause they know the Americans won't let them go hungry and without a place to live. Then, their children have kids when they are 16 and 17 years old amd so on and so on this the population is out of control like in Mexico.

American plan their kids if they can. Can we afford to have kids? Let's have 1 or 2.
But with these peoples culture, they screw like crazy and have no responsibility. This country will become a 3rd class banana republic one day. They will be able to outvote us like they are doing now. Our voices will mean nothing. Heck they mean nothing now.

Now both Dems and Republicans want to make the 11 million illegals aliens here "citizens" just like that. Soldiers died in wars to protect our borders and raise the standard of living in this country. Now it's all going down the drain. We have no borders anymore and we are losing our language and culture.

I just saw on TV that a principle of a school will be FIRED, if he doesn't learn to speak Spanish in 6 months cause
all the illegals in the school only speak Spanish?
WHAT THE FUCK???? He has to learn their language or get fired? How come these fucken illegals bastards don't have to learn English? Who is allowing this to happen?

We are being sold out. Name me another country that will allow 10,000 illegals a day to enter their country with diseases in many cases, take their jobs and live off them like leaches? If this was the Ukraine, the people would never let their gov't crap on them like that.

Do you know out of bush, cheney and wolfowitz, NOT ONE served in the military? Yet they send other people's children to DIE for them. Why isn't bushs
beautiful daughters in Iraq risking their lives for the cause? I mean Jesus will protect them Mr. Bush so what's the problem?

But that would never ever happen. Their children are too special and beautiful to be sent to fight and die. But YOUR beautiful kids can be sent to die for their cause. Their families don't have to walk the streets where illegal gang members can rape and kill them but our parents and kids can. I

mean why not?

The lowlife bush "got even" with a CIA agent that said his bullshit Iraq stories were just that, lies so he could go to war. So he had his name released to the public. He could have been killed. How fucken nice huh?

The Democrats and the Republicans all serve the same Gods. The oil, drug, health insurance companies and other big corporations that make the laws for us.
This country is being sold out. You are being sold out. Teachers tried hard to make us a land of intelligent people. That standard is going down the drain.

We are letting uneducated illegals to become citizens of our great country. Their children don;t want to learn English and overpopulate our schools and hold back YOUR kids from getting a good education by slowing everyone down.

The parents don't give two shits to try and learn our language and their kids grow up the same way.

Thanks to Bush Americans are HATED now all over the world. Our dollar is worth less and less and the world's Euros are worth more and more.

I also believe this administration LET 911 happen. This was the reason to keep them in power and take our rights away slowly and surely while making them BILLIONS for the war machine, plus giving them the "right" to invade any country they want now.

Where is Ben Ladin? We can't find a man who is sick, needs daily dialysis and is 6 Ft tall. And we will NEVER find him. The Bin Ladin family is good friends with people in our gov't. They and their other Arab friends have BILLIONS invested in this country. They asked that we leave Bin Ladin alone and let him live and that he will never do anything like this again. Plus, they would pull out billions of dollars from this country and that means no big bucks for the higher ups.

So, we went after Saddam. Yes he is the real enemy. Let's go get him! He has weapons and nukes that will take out America! OK bush and cheney, send YOUR kids to fight for the cause. I mean if you believe in Jesus so much you don't have to worry about them getting killed. And even if they do, it's OK.

OK for YOUR beautiful kids to die and for Jesus to protect them....

But Bush puts on his "pilot gear" and he did his part. So now you all should be happy. Happy with everything he does.
He's looking out for us. Now let's vote Cheney in for 8 years if he decides to run. Yeah that's the ticket......

Go back to your happy lives morons and take a nap....

Lucky

I'll give you five bucks for the rocket propelled sled, if it's not
dented.

P.S. Found the trash bag, thanks for the power supply.

.....
Strange propagation for a month now. From my location on the edge of
the Laurentian shield, I rely on sky wave to hear Art Bell & Co at
night. I
have the big clear channel stations set up on the pushbutton of my
dx-398
so that as one station fades out I can switch to another with a
different skip distance and not miss any thrilling detail of the end of
the world, etc.
The stations on the buttons are Chicago 890, Des Moines 1040, WGY,
among others.
All these stations have vanished with no hint of a signal for almost a
month.
I don't know if this is caused by some seasonal change, HAARP, an
upcoming pole shift, or the chemtrails in the sky being laid down every
day, and if I can't
hear Art Bell, I can't find out what is going on. Should I sell my
shortwave radios, buy some Burky water filters, lay in a year's supply
of dried food,
or study Edgar Cayce?
Strangely, although shortwave is the pits, except for some long skip,
the usual bible thumpers are still coming through on shortwave. Could
it be some sort of cosmic conspiracy? Or is it scientifically explained
by sunpots. Even my GE II just hisses, a bit Satanic, I think.

Pete,

I ordered one yesterday and found a dealer in this country who has them.
Wasn't easy for sure but I did it. They are much cheaper here then in the UK
for sure. Like 1/2 the price. I should be getting it hopefully today or
tomorrow!
I asked around and one supplier tracked the radio down for me. It's renamed
again in the U.S. Can't wait to fool around with it.
Have a good day.

Either way, if Bush is really the Emperor he doesn't have to account for anything so you're wasting you time. That's one of the perks of being the Emperor.

Selecting a leader based on a promise to provide protection is
infuriating to me. I lost it.

Bush ignored a hundred warnings and let 9-11 happen. That's not what
I call ''protection''.

What the hell do Muslims have to do with anything?

Reagan and Nixon are both burning in Hell, you are a little late.
Cheney and Bush are in power, raping and pillaging, and their
corporate cronies control the media and keep you in the dark.

Clinton gave up sovereignity and secrets, to be sure, but I think he's
also paid. So I'm not sweating him. I am worried about dead fish,
dead oceans and dead Constitutions. Democracy has been around 220
years. Tyranny for 5,000. They want us gone.

More or less. These things must only cost a few bucks to make in China, and the SW on the first generation Freeplays was pretty much useless for North American purposes. Like I said, these radios must be godsends for poor African farmers living on 50 cents a day, but for Americans, who have access to cheap batteries and who don't have the stress demands on these radios that the average African would, a $50 Degen or Tecsun would be a better choice. The Freeplay Lifelines that the VOA gives out don't look like they're frequency fixed, but I doubt they're good for much more than listening to a few major stations (DW and Radio France have major African operations) and the small, local SW stations operated by local govt's.

Legally, WWCR is NOT supposed to be on 3210. The US has NO freq
allocations in the tropical bands, neither does anywhere else in the
western world, and that's to keep bands open for fleawatt transmitters
in the third world, where many people even today rely a lot on SW. The
FCC is doing a piss poor job of regulating SW because there's no profit
in it and no powerful lobbying group (like the NAB) pushing its
interests in Washington. Remember when WWFV broadcast on 6890 (I think)
which is outside of EVERY SINGLE broadcast band, ham band, or any other
band, and the FCC didn't do a damn thing about it? One mega fine would
have shut down those losers right now, but the FCC didn't act. Same
thing with WWCR, if the FCC wanted to they could stop them from
broadcasting in the tropical bands where they're NOT supposed to be, but
the FCC won't do it. Our govt has totally been taken over by money-the
more dough you have, the more access and influence you get-and it sucks.

You didn't get the joke, I see. In 1986 Blather started signing off with
the word "courage" simply because he liked how it sounded, or that's
what he said at the time. Then after a week or two he stopped doing it.
Yet another bizarre incident in Blather's "career". Kenneth, what is the
frequency? Not any channel that Blather is on. *click*

Yep. If you try looking for "unbiased" news, after a while you start feeling like Diogenes wandering around Athens with a lamp in broad daylight looking for the truly honest man. He never found him, and you won't find unbiased news either.

<>

Not really, because the ability to select sidebands while in sync mode
is a
big plus in mitigating against ACI. Of course, one can do the same
with just SSB,
but going through the trouble of having a sync detector and not being
able
to select sidebands seems perverse nowadays.

<>

There is so much loose talk about this, but I think the above is a good
way of putting
it. First of all, how could one *prevent* fading if the channel is
fixed? Sync does not prevent fading,
but as long as the detector is able to reasonably track the carrier
phase in the fading medium, it will
provide better performance than an envelope (amplitude) detector, so in
this sense sync
detection does mitigate against fading.

<>

True, this is why I think it's perverse when most of the expense is
already in
designing a PLL-type sync not to go the extra step in being able to
select sidebands.
It's a question of implementation.

<>

The opposite is true. When you have very high SNR conditions,
an envelope detector performs almost as well as a sync detector, but it
is
in the low-to-medium SNR region where you will see the performance
improvement, especially in terms of signal intelligibility. This can
be verified
by anyone with a sync detector radio. Try listening to a strong signal
in the AM band with and without sync: there is almost no perceived
change in
signal quality. Try the same on shortwave, you'll see more of an
improvement in sync mode.

RK

Radio Australia is not the only shortwave station to ever broadcast out
of Melbourne

its foe of as you say the ...neocons

FOX has a Melbourne Connection

Rupert FOX Murdochs Dad was a Melbourne Journalist
who caught the train to work via Flinders St Station

http://www.woopidoo.com/biography/rupert-murdoch.htm

Sir Keith Murdoch was instrumental in founding the American Australian
Association in 1948 and the Murdoch family has
since continued its active support of the Association in NY

Though a Printman Keith there was also a radio station in the Building

With a Fanfare would come " These are The Herald and Weekly Times
Stations.. 3DB and 3LK" and here are the Football Results !!!!

On February 28, 1987, after a dramatic struggle, Rupert Murdoch
won control of the Herald and Weekly Times,and 3DB
the company his father had built.

It was on the occasion of the 1934 Centenary Celebrations that a relay
of these events from 3DB was heard worldwide each evening for nearly
two weeks, beginning on October 28. The shortwave transmitter that
carried this
program relay was the 3.5 kW unit, VK3ME at Braybrook .. just out of
Town

The Shortwave broadcasts from 3DB Were also heard all over Australia
Maybe on receivers like these

http://members.ozemail.com.au/~pmhughes/

These are early AWA Aussie Radio
sets... rare

Keith

Emperor Bokassa certainly didn't think that he had to account for anything. At least not where his own people were concerned. Keeping the French happy was another story.

Did I ever tell you about the time when Bokassa ordered a search be conducted to find his long-lost child in Vietnam? The child was the result of a relationship he had with some Vietnamese whore during his military service in the French Indochina during the 1950's.

Heck, back in the day, I used to watch these news casts called "Kids' Beat" on "Superstation" TBS. These news briefings were short in duration and hosted by a girl named Audrey Lee (who later did TV ads for National Pride Car Wash).
As for any agenda or bias....I dunno. Maybe Ted Turner was tryin' to manipulate the malleable minds of America's young through these stories of children participating in science fairs and the like. Who the hell knows?

There might not be so much frustration if they could understand enough
English to understand your problem. I delt with a help desk in India
over a credit card issue...never could get it across what my problem was
no matter how many ways I attempted to expalin it, when I asked to speak
to a manager, she hung up.
Maybe these companies will finally get the message that customers are
getting tired of dealing with people who can't understand enough English
to be of any help and bring the support centers back to the U.S. Don't
hold your breath.

Are we talking what's no called "quasi-synchronous"?

Decades ago, Motorola had the MC1330 which was a mixer and a limiter
in one package, and intended as a quasi-synchronous detector in tv
sets.

I suspect if driven properly, the MC1350 IF amplifier would do it, since
the stage that is voltage controlled is just a "Gilbert Cell Mixer".

When the MC1496 Mixer (a "Gilbert Cell" long before the term was applied)
came out in the early seventies, there was an article in Ham Radio magazine
about it, I think by Roy Hejhall, and one of the examples was as a
"quasi-synchronous" detector, though I'm not sure if it explained it
as such or just as a fancy AM detector. Didn't even need a limiter, if
you fed a strong enough signal into it. The datasheet or application note
for the MC1496 includes the circuit.

Of course, there have also been examples of them based on FM detectors.
Many of those in ICs used a scheme that included a balanced mixer, and
of course it had the limiter, so all you had to do was hook it up.

I could have written this post! The solar activity made AM 740 vanish,
all right, but it is coming back these last few nights. Where do you
listen from, John?

Remember last winter when it was clear as a bell from 6:30 or so on?

Tony

Sure, but with AC, you have to factor in the inductive reactance on TOP of that resistance. The resistance is going to remain the same in either case, given the same wire size and length.

You now have a sum total of an impedance, which forms the hypotenuse of the impedance triangle. The impedance will always be greater than resistance only or XL taken by themselves.

When they are transporting, say, a million dollars worth of power a day, a saving of even one percent amounts to huge money over the course of the line lifetime.

They deregulated power here (Alberta, Canada)a while back, against all evidence of it being a better road to follow. The rates have increased substantially. There are a huge number of wooden creosoted poles springing up on major thoroughfares. This is in a city of a million people, Calgary. There is very little of the greatly increased income being put back into infrastructure.

Back when power was regulated, there was a systematic movement of power lines underground, out of the weather and out of eyesight. That philosophy has now disappeared. On one major thoroughfare, they painted the poles silver in a failed attempt to make them look like steel.

There have also appeared three more charges on the monthly bill. These are corporate leeches who paid the EXISTING leeches money in order to be allowed to attach themselves to the wallet of the paying public. They provide NO discernible service to the consumer, other than giving them extra reading material on the bill.

I see it differently. They WANT to use DC because it saves them on the cost of transmission losses. The money has to be expended because it will give a much bigger return on the investment.

> I remember that.... Yeah, canada uses a DC Transmission scheme. However, DC
> has its own problems (such as induced voltages on the line during solar

I wouldn't think the induction process cares WHAT the line is carrying. The induced voltage would merely piggy back on what's already there. I read once that the Alaska pipeline may carry something like a hundred amps (or larger) during some solar activity.

Bush attacking Pakistan and Iraq was more serious than Watergate.
Serious and necessary.

Hussein had dropped nerve gas on 100,000 Kurds, tortured political opponents with "shred people alive" machines, and had his sons Uday and Qusay chop off the Iranian football team players heads for lackadaisy play during the world cup. If Bush had kept his soldiers home, we would still have sports stadiums full of high school kids forced to watch mass hangings in Baghdad.

God bless Bush for doing something about all this evil stuff.

478. What frequency does this operate on?

Irrelevant & Opinion ?

Opinion? Even the administration you apparently hold so dear admitted there were NO weapons of mass destruction; thus we are in Iraq based on a lie. (No "opinion" about it).

Irrelevant? 1600+ dead for a lie. 12,000+ missing arms, legs and various other body parts for a lie. (and that's just us, to say nothing of the thousands of dead and maimed Iraqi civilians)

If you consider that irrelevant, I hope your kids or grandkids aren't some of the ones sucked into the above "irrelevant" statistics...

It's worse than you think. The US politicians seem addicted to using overseas
call centres. You'd think they would keep the jobs at home, being your public
servants and all...

==========

Georgia is one of 32 states using the same two call centers in India and another
in Mexico for Spanish-speaking callers.

Source record: 24028

Greetings! I picked up a BayGen Freeplay made in South Africa about 2 years ago at our local Big Lots Store, discount store, for $30 out of curiosity. This one looks to be made for the American market and has no model number on it. MW, FM, and SW from 3.3 to 12 mhz. Fifty turns gets you 30 minutes. It loves local stations, but with the addition of a long wire it does a decent job without the typical nasty overload problems. The most agravating thing is the grinding hum while it is playing. You can give it 3-9 volts with a walwart and avoid the hum. It looks like a lunch box and is way too heavy to be practical for camping etc. So, needless to say it doesn't get much play time even if the power is off. I would love to add solar cells to it to run off while I am outside at the picnic table listening. Have a great weekend! Jon.

492. R71A Dead Below 7998!

Newsgroup: rec.radio.shortwave

Source record: 24029

My R71A just died below 7998.0 - completely dead air! Above that freq is just fine. Anyone know what might have caused this? I seem to remember once someone told me something about a 'paper' something that might go bad and have to be changed to ceramic. Can someone fill me in please? Is this expensive? Are there directions somewhere on the net? The problem seems to be intermittent - comes and goes, abnormal static, then it went dead. Any help/suggestions greatly appreciated!

Greetings! TenTec has a BFO kit that they sell for about $11-$12. Has anyone used one before? I have a Rat Shack DX-396 that I picked up new on clearance about a year and a half ago for $27 and I really enjoy the radio for taking with me in the truck or using with headphones. It tunes through the SW bands from 2300 to about 21885kh continuous. It tunes in 5 khz increments. Will that BFO tune far enough to get the freqs in between the 5 khz steps? Just curious. This thing can be added inside the case if there is room, or attached to the radio on the outside, or just put in its own case and just placed close to the radio. I just thought this might work out nice instead of buying another portable when I would be satisfied with this if it could tune on 75, 40, and twenty. Thanks for your input! Have a great weekend!
Jon in South Carolina.

498. India gives global Ham operators own satellite

Newsgroup: rec.radio.shortwave
Date: 2005-06-04 07:27:46 UTC
From: Mike Terry <miketerry73@btinternet.com>
Message-ID: <3gd3fgFbvbc4U1@individual.net>
Source record: 24035

Source : Moneyplans.net Archives

India has a gift for Ham radio operators worldwide - an exclusive satellite to be launched Thursday that they can access for free.

The 42.5 kg micro-satellite is one of two that will be sent aloft from this launch pad that day. Today, there is no HAMSAT in the skies, the last one having died two years ago. That was the American AMSAT.

The Indian HAMSAT was originally scheduled to go up in 2003 but got delayed. Once it is up, it will be the only satellite of its kind in orbit.

"The amateur radio operators' community is eagerly awaiting the ISRO (Indian Space Research Organisation) initiative, which will allow them to use the UHF/VHF bandwidths for transmission and reception," project director J.P. Gupta told reporters here.

Saudi Arabia has a HAMSAT in the sky, but this is available only to operators in the Middle East. The transponders are switched on only when this satellite moves over Saudi Arabia and the Gulf countries.

"India will make available the ISRO HAMSAT to everyone in the world, free of cost", Gupta told IANS.

This satellite cost Rs.30 million ($690,000) and is expected to be operational for at least two years. By that time, ISRO hopes to come up with a second more advanced version.

Ham radio services have proved very useful in remote areas, especially during disasters. This was more than evident after the December 26 killer tsunami struck the Andaman and Nicobar Islands. The Ham operators on the islands were the first to establish contact with the outside world.

There is a subscript to this tale.

The defence ministry had all these years forbidden Ham radio operators from the islands, citing their strategic location. Permission was finally granted on December 15, 2004 and two Ham operators from Chennai landed on the islands within a week, just days before the tsunami struck.

Had the Ham operators not been there, it might have taken a lot longer for the world to learn about the disaster or the extent of damage.

Most components of the ISRO HAMSAT have been fabricated in India with help from experts of the Indian AMSAT Society. ISRO developed one transponder of the satellite and the other with the help of Dutch scientists.

With its own HAMSAT, India is hoping to rope in and involve the amateur radio operators' community into its integrated disaster management plan, experts say.

Mr. Robert Shetterly is a bit off the centerline for truth and world peace. Evidently this liberal arts major, never serving his country or ever would stick his anatomy out there for a fellow man, is quick to criticise Bush's actions regarding Iraq.

Well Mr. Shetterly, I have fought, lived, worked over here in the Middle East with these heathens long enough to know that you better pick the right side when it comes to god and country. Bet you voted for that draft dodging pretty boy who went to Moscow when such visits were considered a federal offense (never prosecuted was he). Had I behaved like Clinton in between lies, deceit, and naivity, my naval commission would have been stripped from me, and federal pen would have been my next stop. Where was the intelligence service, the physical agents at during the Clinton years?????? It seems that people like yourself who are self-proclaimed experts or value-based judgers should have been speaking up and against the lax posture of this country that directly led to 9-11.

Well let me tell you, Bob...since Bush has been in office, we now command respect over here......the hope of the younger generation here mirrors that of the people in Lebanon and Egypt.....and since when should we concern ourself with what the Arab states think of us??? We fought against the creation of Israel...that was done by Briton...we didn't recognize Israel...that was left to the USSR...we enforced an arms embargo on Israel...the French wormed around that too...and up to 1967, we supported the Arab and especially the Palestinian cause...until the Arab states chose the godless USSR for free weapons and intelligence to destroy Israel with...then we switched sides...who guaranteed that Saudi Arabia would not fall prey to Britain and France after WWII...Roosevelt on a battleship hosting the then King of Arabia.....all in all, we have had a remarkable record only blighted by the liberal USA press, and the radical elements over here. Was it not the recent poll on the credibility of the press in the US citizens' eyes put them lower than politicians and lawyers...wonder why....well, it is wild accusations by "I can't research a real scoop" people like you.

What to something about the Middle East, or Iraq...ask Mr. Shetterly and you'll get heresay and unsubstantiated wire service trash....talk to the people over there, working with the Arabs everyday, and we'll give you the real story. What is the percentage of CNN owned by Middle Eastern interests? How much of the newspaper and journal/magazine world is controlled by the Hearst empire....should I go on???

Try this on for size...why does not Shetterley and his liberal louses research and report the cry for freedom in the Arabian peninsula, and the resulting jailing of political activists. Well if their sources are in Dubai as CNNI's are, you'll never get the truth...better Al-Jazeera talk shots at both sides of freedom, than a one-sided, misinformed, and often scripted source that carefully avoids anything negative about the Arba culture, politics, or religion.

Most importantly, I'd like to toss Mr. Shetterly in a few of those mass graves up north, or see if those insurgents (try terrorists for a more accurate word) will afford him any more mercy than they give the residents in the Middle East, or the allied forces.

In conclusion, if there are not enough trained agents to speak the lingo, or dial the radio to listen in, or spys to assess what is what on the ground, who's fault is that??? Hillary says it took a village...I say it takes a strong family to instill the moral courage and dedication to be a true American, one willing to defend the weak, and make a stand when all others cower behind a false sense of morality...doing nothing is as good as pulling the trigger put up to the heads of the Moslems in Yugoslavia,... or gassing the Kurds, or bashing the heads of women in a stadium in Afghanistan, or raping/murdering women chosen for sex solely in Iraq,...shall I go on.....and think that enough biological agents could be consealed in your wife's perfume sampler glass vial to kill New York City population.....but I am sure you are an expert in ABT NBC delivery vehicles too, Mr. Shetterly. Ignoring the problem didn't make the problem go away on 9-11...where was the press then...a few Korans are defaced by Americans and Moslems and the world goes nuts...but destruction of other religions monuments, including the desecration of the Holy Sepulchere in Jersulam by Islamic exteremists, and depriving others in their countries of religious freedoms, and the press say nothing.

Keep banging away at the USA my friend...when the western world realizes that making citizens of barbarians at the gate does not promote peace (remember Rome) then maybe it will be too late. Do you think you'll be able to write as you please, do as you please, say as you please, or even dress as you please under the oppression of those we are fighting now abroad??????

Or perhaps you are just another Kofee Annan (sp. hic)...say what you have to, do as little as you have too, offend few, but rake in the bucks through direct or proxy interests....because no one really cares about humanity...those stories on Dafur have not stopped the rape and killings have they...perhaps Mr. Shetterly you would venture there with pen in hand, or if given the option with a gun in hand...that would be more choice in the matter than those more unfortunate souls have now...also, just because Moslems are deliberately killing Christians does not make the issues more newsworthy...but pro-arab stories are definitely more financially rewarding......

26 year US military veteran living/working overseas...my presence makes a change, but your story and attitude risks my life and those brave young men up north of me in Iraq......perhaps you'd like to climb on a plane and go preach your views to them in person.....and maybe Bush should hire you as his next NSC advisor....unqualified mouthpiece with qualified opinions from unsubstantiated sources...strange, I never was in these deeper inner loops political let alone military, but some smuck managed to be right there on a daily basis with the President of the United States, and Mr. Tony Blair....go get a life and a real story, Mr. Shetterly....Let's impeach you for bad journalism....but better yet, a law suit or two holding you and your kind responsible for the outcome of your kind of published truth is in order.

The truth is stanger than you think, Bob....but being there is the only way to see the distinction between the shades of grey in this cruel, cruel world. When the United States is gone, do you honestly believe there will be world peace, or any other nation will send her sons and daughters to a fight to save others people rights or lives??? I live the real story everyday, and you really disgust me with the same old song....maybe I do not like Bush too, but the truth is the truth......or perhaps the pliny of 2 and 3 stage ICBMs sold to these Middle Eastern dictatorships will one day find their way to Rome or even our nation. Then what will your story be ... get over here, get it right, and get it fast. The only real enemy we will have after we clean up another post-colonial mess left by our European breathern is our own press, politicians, and business leaders. If the USA is corrupt and losing its world status, it is because of traitorous Americans like Shetterly, and those CEO's off-shoring our country a piece-at-a-time. Enough of this hypocracy is enough. Hen the light of the world disappears, it will be the dark ages again...even the EU cannot let go of old paradigms, religious or cultural. We are doomed by half-truths from sideliners as yourself, Mr. Shetterly.

Source record: 24043

I studied Tesla technical documents in the National Archives, as well as, in his homeland's library some 37 years ago...as a government electronics engineer who dabbled with atmospheric electricity, scalar waves, and low frequency toys.....Tesla achieved many remarkable things...yes, he started tremors in NYC with a mechanical vibrator (who said he didn't on this web site, claining he was insane never engineered rigid bodies stationary or otherwise), created radio waves and control system theory....on and on...but there is no free energy to be had or efficiency gains from his coils are claimed by crackpots with the IQ of bean dip. The legacy of Tesla, as all scientists and engineers should be, is experiment and never take a "law" as gospel truth...he was right about wave mechanics, and the last fields to collapse in a star...genius yes, but to build his dreams into reality, failure or not was the drive and true genius of Tesla...leeching off his ideads and designs puts everyone in the Edison and Westinghouse class. Where are the future Teslas...not behind video game consoles, or university podiums....they are in the labs and more often than not in the garages of America. Too bad Scientific American removed the Amatuer Scientist from their magazine. It was the one thing inspiring about their entire journal...what a pelican head the new editor was to remove that inspiring, thought provoking section.

Inspire to be not to become.

Why did he wait more than 2 years to do something about it????????

Face it, it wasn't about freeing Iraqi's. It was about starting a war to satisfy his bloodlust. The political spin job has turned it into a humanitarian effort which has been bought by the gullible.

Keep in mind China's greatly increasing need for oil. The invasion by the US guarantees that the right people make the money from the oil. When you control the quantity, you can control pricing. Political pressure is also a lot easier to apply when you control such an important commodity.

If I own a copy of the koran, I should be able to tear it up a page at a time and flush it down the toilet. I could certainly do it with an American bible--what, now we value an evil book and allow lawyers to raise it to a level of respect that we protect the very book which calls for our enslavement? Hey, at that point don't complain about someone doing something to you--you will already be doing enough of your own folly!

Commanding respect means doing the right thing. Desecrating holy books and
people leads us in the wrong direction.

- I'd call Universal radio, C Crane or some shop of the ilk..

They are usually good with bits of information; or would know who might have a clue as to whats going on inside the set.....

On the bright side, if its bad bad news, you can spend some time shopping for a replacement..

Something similar happened on a car radio I had.. I gave it a nice funeral & bought an electronically superior replacement..

Most Indians speak very good English, at least in the cities, AFAIK. I've never been to India, but all the Indians I've met elsewhere spoke perfect English, albeit sometimes heavily accented. They have many different languages and use English as a lingua franca to talk to other Indians in their own country, so complete fluency is more the rule than the exception.

Of course, they do speak what you would regard as British English, but I understand that the call centres all give training in American colloquialisms. I've never had the least trouble communicating with anyone in Indian call centres, but then I am British, after all. Perhaps you will all have to learn the Queen's English? It makes a change from learning to label your rubbish 'basura'. Perhaps I could offer classes in how to communicate with call centres in proper English. Note that they are call 'centres', not 'centers'. The British Empire strikes back!

They always seem particularly pleased to hear an English voice on the line, and sometimes ask me if I like cricket. I think it is a relief for them not to have to talk American. They can get quite chatty. There was one funny incident when I asked one of them if he was in India and he told me that he wasn't allowed to answer that question!

Seems like some use was made of some facilities up in CanaDuh as well. No need to employ Canuckys when we should be employing folks right here at home.

Soon, folks all over CanaDuh will be standing on line to get their daily ration of poutine.

I agree. My experience with american call centers has been about as good as those that appear to be located overseas. The quality of the response is directly related to the skills and knowlege of the individual - their location has little to do with it. Tucson, Arizona has numerous call centers operating there, and I would guess many of the operators have a non-U.S. accent as well. When calling a call center my purpose is to get information. I've found that by staying cordial and sometimes repeating a question that I get the results I'm looking for. Some on this forum(not you) seem to be more focused on insulting the operators and generally causing problems. They must have a lot of free time.

Don't waste your money on it. I did the same thing for the very same radio. It's very unstable with low output on the fundamental freq. and loaded with harmonics that you don't want. I went and got a Kaito KA1102 and have been very satisfied.

Hello, Alan

Thank you for your kind offer, but I have a few friends in the U.K. who have kindly offered to teach me the Queen's English.

I did catch some flak one time when I created a database and had a sub-category of "moulded" components. We tend to drop the letter "u" over here quite a bit. And we had better, given the political climate over here :))

Unfortunately, I have no idea if I can set my spell checker for the Queen's English; if I could, I most certainly would as I would use it especially to communicate with a couple of extreme right-wing friends on the net ;)

For what it is worth, my grandfather (my father's dad) was Scottish; he emigrated to the U.S. when he was 7 years old.

73 from Rochester, NY

550. Lightning Protection - What Do YOU Use?

Newsgroup: rec.radio.shortwave

In a recent conversation with fellow SWLers, we noted that each of us used a different (or nonexistent) solution to lightning protection.

You can also see this attitude in antenna discussions...very little discussion on proper grounding and lightning disappation.

So the question... what do YOU use for lightning protection to prevent you and your radios from being turned into melted blobs of charred tissue and plastic? Examples of proven designs with their accompanying stories would be of particular interest.

TMT

There's a good chance that one of the input bandpass filter switching relays went out. I'm pretty sure they used relays instead of switching diodes in this radio because you could hear them click when you changed band ranges.

Ahh thanks for that link. Thats it - the trimmer capacitors - they are made of some degradable paper material and should be replaced with ceramic. Called a radio place here in Tampa - its about a $65 repair (he estimates). Guy says he's reluctant to work on R71s but wouldn't elaborate other than to simply say they're 'older radios'. Says I can drop it off and pick it up in 3 days. I have a feeling it will be more than $65 when I get there. Thanks for the info

Sorry I didn't mention it in my first post, and you evidently missed
my follow-up one: I'm in the SW corner of Michigan. The faint station
you were hearing on that frequency was likely KRMG from Tulsa, OK. On a
good winter night, it clashes annoyingly with CHWO where I am, though
CHWO usually wins. It's no problem past KRMG's night operation time, as
they then drop to 25,000W.

Tony

Herein lies the problem of posting other people's articles, you've not
even checked to see whehter the story is correct or not.

I don't think there are no amateur satellites in the sky. I don't keep
track, but just a few years ago there were still some old ones floating
around, and of course AO-40 had just gone up.

But what's missing is that these are hardly gifts to amateur radio, it's
the other way around. Amateur Radio gave the world the concept of small,
inexpensive satellites, and the notion that a launch rocket could be used
for more than once satellite.

When OSCAR 1 went up in December of 1961, the space age was barely started.
SOmeone had the idea of using unwanted space, and track down permission.
Other's built the satelllite, I think it actually was in a garage. It
was the first non-governmental satellite, if I'm recalling properly.

Sure, someone was likely to come up the concept if hams hadn't, but it was
amateur radio who did it first. There have been plenty of "micro-satellites"
since then, from government and universities, and the model of amateur radio
satellites has always been there.

Given the general wording of the article, I'm suspicious of the "gift".
It may mean that the Indian government has paid for the launch, fully
or partially. Over the decades it's become harder for the amateur satellites
to get launches, because their very success has meant the secondary space
on a rocket has become valuable.

Or perhaps it means that the Indian government sponsored the project
not so much to favor amateur radio but as a university project, to
give students satellite design and building experience. Since amateur
radio has always been a technological playground, putting such a satellite
on the ham bands always for more play than if it was set up for commerical
or even experimental purposes.

I have no idea, but the article wasn't well written, and the facts
would better help amateur radio.

oh yeah..... I was digging through some of my old engineering and technician textbooks for college.... :) man I need to bone back up on this math!

>
> You now have a sum total of an impedance, which forms the hypotenuse of
> the impedance triangle. The impedance will always be greater than
> resistance only or XL taken by themselves.

is there capacitive reactance to consider as well (such as the value between the line and the other line (parallel transmission lines) and also earth ground (typically some 150 feet or so below the wires in question)?

>
> When they are transporting, say, a million dollars worth of power a day, a
> saving of even one percent amounts to huge money over the course of the

still, one has to ask, what are the actual losses incurred using AC versus using DC? One would think a "tuned line" would be more efficient (common sense wise anyway).

oh yeah! same here. in fact, California was the biggest example of what a deregulated industry (that provides a national infrastructure) can become: a big fat hairy hairball of a FUBAR mess. couple that with Enron (the biggest con scheme in the last 300 years!) and its almost assured that someone is going to get screwed.

heard that here in Az as well. we had a utility pole replaced in the back yard this last year (another wooden pole in trade for the old pole (which was 40 year old wood). asked the crew forman why they didn't just start burying new stuff. I was given a lot of reasons, one of which was this: "Underground utilities are 3-4x more expensive to maintain" and there was also some chattering about "purchasing easements". Still, considering the summer monsoons we get here in Phoenix, and the fact that every year, in excess of $100 million gets spent replacing poles that were damaged in storms, makes me wonder.....

>
> There have also appeared three more charges on the monthly bill. These are

seen that already. the utilities have turned over the poles and infrastructure to a 3rd party that rents out pole space to each company.

our bills now have 2 parts:
1. actual utility usage
2. easement rental

Then of course, there are the inevitable taxes (state, federal, local,
etc.....).

sigh

Theres no such thing as lightning protection. A so called lightning
protector will gaurd against static charges that can build up on your ant.
from electrical storms but nothing can protect your radio from a close or
dirrect lightning strike to your ant. The only way to prevent damage is to
unhook the ant. I always unhook my ant. when I'm done.

Thousands march today in the streets of Azerbaijan today demanding freedom, and holding up pictures of their activist hero President G.W.Bush.

No pictures to be seen of French and German leaders, nor of anybody else from the "coalition of the unwilling".

I took a direct hit 4 weeks ago on my longwire. Had all radios unplugged from antenna. I was in the next room in the basement when I thought someone shot one of my rifles. It jumped from the coax which was just hanging on the wall to a weather radio antenna (indoor antenna), went thru the weather radio and decided to spiderweb out o various parts of the house. Burned up a chip board in a maytag washer, chip board in a sony flat screen tv, hosed the weather radio, hosed the e port on a linksys router, blew apart my rf systems balun and trashed a cable modem . Everything was on a different circut.

It is not the power drop, it is the fact that KRMG is extremely directional
at night in that direction. 25 kw is huge power, and a change from 50 kw to
25 kw would hardly be noticed, as it only effects the station's field
strength by 25%.

577. Power Supply Radio Protection Experts Needed

Newsgroup: rec.radio.shortwave
Date: 2005-06-04 21:26:09 UTC
From: Lucky <lucky@TheBotStopsHere.com>
Message-ID: <11a473kbidjln3d@corp.supernews.com>
Source record: 23965

Hi guys

I have a Icom R75 and Lowe HF-150 I want to run off a Astron PSU model SL-11a. It's 13.84V and 7Amps. Now, I have some questions please about how to protect my radios from any mishaps from the PSU or otherwise.

Now the specs for the R75 says it's current drain at 13.80v + or - 15% is :
Standy 0.9 Amps
Max. Audio 1.1 Amps

I bought a 2 conductor DC accessory cable that has a fuse holder on it. I will use that to connect the PSU to the radio.
It it means anything it is 22 AWG RS part # 270-025

1] Now, what size fuse should I put in the fuse holder to make sure the radio is totally protected from the PSU?

2] Am I protecting the radio from too much volts or amps or both? I figured Amps.

3] I have some 250V 1.6 Amp fast acting fuses. The are 5 x 20mm GMA type fuses. Radio Shack part number 270-1051. Are these OK? Is the main thing the Amp rating and not the volt rating?

4] The Icom Radio comes with
3 Amp FGB fuses internally and for the DC cable. Now if the radio draws say no more then 1.1 Amps, why are they using a 3 amp fuse? Why not 1.5A or even 2A? Why 3A?

5] So is 1.6A too low, too high, or just good? Should I go even lower to be sure?

6] Now, the fuse in the Astron PSU itself.
Is that to protect from volt surges or amps surges?

7] Do you think I'm going to extreme measures to protect my receivers since the Astron PSU is supposed to be that good? I want total peace of mind knowing I did all I could to protect them.

8] My Lowe HF-150 will use 13.80v and the same PSU also. According to the manual it can use between 10-15V and it draws approx 300mA but I think it's more in the 500mA range to work properly.

9] Do you think I need a different fuse size in the holder to protect the 150 or will what I use to protect the R75 be sufficient for the 150 also?

10] What is the difference between "GMA" and "FGB" type fuses? Is it better to use the longer ones, the mini ones or it doesn't matter?

I really appreciate the help. The guys at Radio Shack did their best to help me but they weren't sure.
Thank you
Lucky

> radio is totally protected from the PSU?

About 2 amps. (as a rule of thumb I would fuse a circuit at
approximately twice the maximum expected current under normal
conditions) Most likely failures will cause the circuit to draw a LOT
more than the rated 1.1 amps, more than enough to blow a 2 or 3-amp fuse.

> 2] Am I protecting the radio from too much volts or amps or both? I figured
> Amps.

The fuse protects against excessive current -- too many amps.

To be honest you're not as much protecting the radio as you're
protecting the power supply & your house. If the radio starts drawing
much more than 1.1 amps, it already has a serious problem. However,
without the fuse it might cause the power supply to overheat, or (more
likely) cause the wiring to overheat, or whatever part in the radio is
defective might start smoking or even burning.

That said, you're also protecting the radio against reverse polarity.
(getting the power supply connected backwards) The radio probably
contains a polarity protection diode. If you connect the power supply
backwards, this diode limits the voltage that can appear across the
radio to less than 1 volt - but it does so by causing the radio to draw
very high currents. (at least 10 amps, probably more) The idea is that
the fuse will blow, disconnecting the voltage, before the protection
diode can get hot enough to burn out.

According to the Astron website, the SL-11A power supply has builtin
protection against excessive voltage. Actually, it's pretty similar to
the polarity protection in the radio -- if the output voltage from the
supply gets too high, a diode within the supply draws very high

currents, causing a fuse inside the supply to burn out before the
attached equipment (your radios) can be damaged.

> 3] I have some 250V 1.6 Amp fast acting fuses. The are 5 x 20mm GMA type
> fuses. Radio Shack part number 270-1051. Are these OK? Is the main thing the
> Amp rating and not the volt rating?

They're OK. They *may* be more likely to burn out (if the radio for
some reason draws a bit more current then specified) but the only
consequence is you'll have to buy more fuses. It won't damage the radios.

The voltage rating must be high enough to ensure the power doesn't arc
across the fuse if the fuse blows. A 250-volt fuse is more than
adequate for your 13.8 volt circuit. (it is possible to get 32-volt
fuses that certainly would NOT be adequate in a 250-volt circuit!)

> 4] The Icom Radio comes with
> 3 Amp FGB fuses internally and for the DC cable. Now if the radio draws say
> no more then 1.1 Amps, why are they using a 3 amp fuse? Why not 1.5A or even
> 2A? Why 3A?
>
> 5] So is 1.6A too low, too high, or just good? Should I go even lower to be
> sure?

Probably a bit low but if it were my equipment, I'd try it.

I wouldn't go any lower, you'd probably have nuisance failures.

> 6] Now, the fuse in the Astron PSU itself.
> Is that to protect from volt surges or amps surges?

Both. (see my answer to #2) (some power supplies don't have
overvoltage protection, in which case the PSU fuse only protects against
current - amps - surges.)

> 7] Do you think I'm going to extreme measures to protect my receivers since
> the Astron PSU is supposed to be that good? I want total peace of mind
> knowing I did all I could to protect them.

I don't think fusing the power cords to the radios is paranoia.

> 8] My Lowe HF-150 will use 13.80v and the same PSU also. According to the
> manual it can use between 10-15V and it draws approx 300mA but I think it's

>
> 9] Do you think I need a different fuse size in the holder to protect the
> 150 or will what I use to protect the R75 be sufficient for the 150 also?

I would expect any likely failure in the HF-150 to draw at least 5 amps,
so any fuse in the 1.6-2-3 amp area should be OK.

> 10] What is the difference between "GMA" and "FGB" type fuses? Is it better
> to use the longer ones, the mini ones or it doesn't matter?

Without actually seeing the pictures don't use me as the ultimate
authority, but I think the only difference is physical size and shape.

I think you will have to experiment a little to find the lowest size that will protect the radio without blowing out from a little current surge. Start with the lowest value that seems reasonable and see if it blows. If it does, replace it with one of higher value until the radio plays satisfactorily. I think that there is some debate as to whether a transistor will pop before a fuse but you will have done all you can to protect the circuit.
Other problems can come from spikes and surges in the power line or lightning hits. You want to have a good surge protector in the ac line and for further protection, you could add a "crowbar" circuit which protects from overvoltage.
For 100% total security, you could run the radios from a gel cell or sealed lead acid battery and use the Astron to charge up the battery off-circuit. The battery also has the advantage of being free of line noise.
A lot depends on how steady your power lines are and how often you have lightning storms.

And people then wonder why the tech support "monkey" in India is so
surly. If you lived in Bangalore and had to work from 9pm to 5am doing
tech support for Americans who call you "paki" all the time, you'd be
mad too.

Wow good info explained simply Doug. Thank you that was nice of you. It clears up lots of things for me. I thought I was protecting the radio more then anything else but it seems I'm doing lots more that I didn't know about.

I'd just like to know a couple more things please if you don't mind.

I will be using that 22AWG DC cable plus a 6 ft extention adaption cable for the adaptaplug that RS sells. Obviously both cables are different gauges and carrying capacities.

1] Will I compromise any of the excellent qualities of the Astron PSU or effect how the radio receives it's voltage purely by using these differing cables?

2] You say the higher voltage rating for the fuses keeps the power from arcing. How is it determined what voltage rating you should use? By the voltage that is going to flow thru the wires or by what the PSU can put out?

Thanks for being a radio buddy and helping me out. Your website looks like it's full of other good information too.

Lucky

I know that most Indians speak good English, and I have no problem
with their accent. But I had one once who apparently did not
understand English. It was as if he was reading from a script and was
expecting a certain answer back. It was VERY frustrating. Perhaps if
these call centers were a little more discriminating in who they
hired.

I don't want to start a pising contest, but you might want
to visit a local TV or radio station. They take lightning
hits all the time and very seldom have anythingmore then a
sec or 2 of off air to show for it.

Polyphaser(http://www.polyphaser.com/ppc_ptd_home.aspx)
makes some very efective portectin gear that works.
Butyou have to ave a very good ground and well thought
out aproach to your wiring.

I have survived 2 direct hits. First time melted several feet from
my 108" whip and the last time vaporised my ~70' long wire, and
blew holes in the coax.

It ain't cheap but neither is a new house.

Terry

Hi
Yes I was thinking of that myself at first.
Try out a few and see which one does finally blow.
All Astrons have built in crowbar protection except models RS-3a, 4a, 5a and
RS-4L and 5L. That was adept
thinking on your part.

I live in Florida so we get lots of bad storms every so often. I'm new to
this but will look into gel cells as an added option.
Can't have too much fun technical stuff!

Thanks
Lucky

Yes but the average Joe isn't going to want to spend a bazillion dollars and countless hours doing what it takes to install an effective system. I'm just giving practical cost saving advice to the average / casual SW listener and anybody that is going to jump into a major system like your talking about would surely be an advanced hobbyist and have done his/her homework and not be asking the question in such basic terms.

And that is because KRMG goes directional at night, sending nearly all the
signal away from you. It is not because they reduce power.

It is a term for someone of East Indian descent. My East Indian friends from the Caribbean and Europe, some of the many generations, take great offence to it. It is derived from Pakistan, which is a mostly a Moslem country. Indians tend to be Hindu. So it's a combination of wrong country, wrong religion, as well as used by others who aren't part of the India/Hindu - Pakistan/Moslem wars and conflict as a direct insult. There is zero tolerance for it in schools here for instance. Perhaps there are no East Indians where you live.

611. Indian call centres

Those who are interested, here's a link to a radio program about Indian call centres and the social conditions that bring them to India.

http://www.cbc.ca/dispatches/summer2003.html

This is the text, search for India and you'll come to the real audio link:

College graduates often complain how hard it is to find a job these days. But imagine living in India, where unemployment among young people can be more than 50 percent.

Getting work on the subcontinent is kind of like staying dry in monsoon season.

Except in the southern city of Bangalore, where the CBC's Mihira Lakshman says the ability to sound like you're from the American heartland, is the key to a whole new kind of career.

Ah, so - I knew they had a DA2 antenna, but in your last post I
thought you were saying that the nightime direction *was* in my
direction. Thanks for the clarification.

Tony

613. Re: Lightning Protection - What Do YOU Use?

Newsgroup: rec.radio.shortwave
Date: 2005-06-05 02:22:26 UTC
From: w_tom <w_tom1@hotmail.com>
Message-ID: <42A261E2.EE9BABAA@hotmail.com>
Source record: 24101

Your telco has overhead wires everywhere in town. Do they disconnect during T-storms to protect that $multi-million computer? Of course not. Protection for each switching station has been standard and well proven effective since before WWII - even before transistors existed. It is routine to suffer direct strikes and not suffer damage.

The secret is a most critical component of the protection system - the single point earth ground. Each incoming wire connects to earthing either via a direct (and short) wire, or via a surge protector. A surge protector is not protection. Effective protector connects destructive transients to earth ground. Protection is defined by single point earth ground - quality of and distance connected to.

Notice how a properly installed CATV enters the building. First it drops down to single point earthing, makes a less than 10 foot connection, and only then rises back up to enter the building. Wire to and wire from that earthing point must be separated. Protection is as Ben Franklin demonstrated in 1752. Lightning is not stopped, blocked, or absorbed - as those who promote ineffective plug-in protectors would claim. Earth before lightning can enter a building to overwhelm protection already inside all electronic appliances.

Same applies to that radio antenna. First make a short connection to earth ground between receiver and antenna. Another poster properly cited Polyphaser: a benchmark in protection. Read their tech notes. Does Polyphaser promote their products? No. Polyphaser is about effective protection. They discuss earthing ... extensively. The protector is only as effective as its earth ground.

Even that wall receptacle safety ground is not earth ground. This for electrical reasons posted elsewhere. Another good source are discussions in rec.radio.amateur.antenna such as "Why a Short Lightning Ground" - especially posts from Richard Harrison and Jack Painter at:
http://tinyurl.com/ao36t

Anyone who says lightning protection is not possible must explain why effective and properly earthed protection works every year in virtually every town. They must explain why electronics atop the Empire State Building and WTC would suffer 25 and 40 direct strikes every year without damage.

Those who claim lightning protection is not possible failed to
first learn a science well proven over 60 years ago.

BTW, every incoming utility wire is just another antenna
connected to everything inside a building. The most common
source of destructive transients is AC electric - wires
highest on poles and utility that typically provides no
secondary protection. You must install the secondary
protection - ie the 'whole house' protector. Every incoming
wire requires either a direct connection to building's earth
ground OR makes that short connection via a 'whole house'
protector.

Protection so effective and so inexpensive as to even be
installed, for free, by the telco on your incoming phone
line. Protection is defined by and is only as effective as
the single point earth ground. Ineffective plug-in
protectors, instead, avoid all mention about earthing (since
they are promoting profits and not an effective product).

There certainly isn't a short connection to ground in those cases.

Short connection to earth exists atop skyscrapers.
Demonstrated by professional research even on the Empire State
Building in the 1930s. Electrical concepts that are beyond
the scope of this discussion. Protection, proven effective
even before WWII, is about earthing. Even that coax wire from
Dish must drop down to a single point earth ground before
entering the building.

How to identify ineffective protectors: 1) No dedicated
connection to earth ground and 2) manufacturer routinely
avoids all mention of earthing. Since rules demonstrate why
protectors sold in Kmart, Sears, Staples, Radio Shack,
Walmart, Office Max, etc are ineffective (as well as
overpriced). Earthing having been long proven as essential to
effective protection as demonstrated by Polyphaser (cited
previously in a post from r2000swler) and in previous
discussions including industry professional at

The problem which I find most is not lack of fluency with English
(in any of its variations) but lack of fluency in the subject at
hand. How can you get assistance with a PC card driver, for
instance, when the person doesn't know (or denies) that the
particular operating system which is being used exists?

Fortunately these problems don't crop up that often for me.

Thanks for the discussions so far.

I take lightning protection very seriously.

I have seen the results of what happens when an antenna and equipment is not protected adequately....equipment fried, people suffering severe shocks and fires started.

An example, one time I was in the basement of a friend who is a very serious ham. With his feed line disconnected from his gear, we watched as a storm induced voltage repeatily jumped over three feet through the air to the basement floor. Even with the feed line disconnected, several of his radios were damaged by induced voltages.

In fact, I've heard RHC use The New York Times as a source. Castro has a vested interest in making the US look as bad as possible, but that interest is greatly helped by the really bad things that the US does. If we hadn't invaded Iraq, RHC would have a lot less material to work with, as well as being able to spread rumors about an American invasion of Iran. From RHC reporting, I've learned that the Iranian mullahs are really, really terrified that we're going to invade, and have been using the Iraqi insurgency as a blueprint for what to do if/when we DO invade. In a nutshell, the Iranians are going to allow us to march to Tehran in triumph, then turn on the meat grinder and make life for our boys hell. In all likelihood, Bush knows this, yet has been keeping it from the American public in order to stop massive protests. If Bush DOES invade, then he will be deliberately sending our kids into another catastrophe, one that will likely require a draft.

I'm
just giving practical cost saving advice to the average / casual SW
listener
and anybody that is going to jump into a major system like your talking
about would surely be an advanced hobbyist and have done his/her
homework and not be asking the question in such basic terms.

--

Given my home is worth over 100K and my equipment as several
thosand if I could find replacements, the few hundred that I spent
was well worth the expense.

Anyone who has an outside antenna, with a feedline that enters
the buidling, had damn well better do some serious planing
and research to make certain they are compling with the local
electrical codes. Failure may result in criminal charges if anyone
gets hurt, and thye could have a nasty suprise if their insurance
carrier finds out the house fire was casued by an improper, ie
non code, installation. Many policies have exclussions for code
violations.

I wonder how many or few in this groud are aware of the NEC
requirements that "coax have the outer conductor connected to a
valid, bonded ground, before being brought inside, or being
grouned as soon as praticable"(their word not mine).
Very few installations that I am aware of even meet the most basic
safety requirements.

I gues hope and prayer might be an effective way to protect your
equipment and home from lightening, but I will stick with Polyphaser.

The primary reason why I am not that active in ham radio is I can't
afford enough protection for an unlimited numver of antennas.
So my scanner diskcone has to pull double duty and work for my
2M, 70cM opertions, mainly for weather emergencies.

I have 6 PolyPhaser units and I only use 4 of them, keeping 2 for
spares.
3 for "my" radio equipment, and 1 for the family TV/VCR.

Put a fuse between the power supply and the battery, and between the battery and the radios.

You might want to check around and talk with your local alarm companies.
Many "high value" clients have the batteries changed on a yearly or bi yearly
schedule. I have gell celss that are t least 10 years old and still have 80 to 90% of their orignal capacity.

For the uneducated redneck you must be to post such idiocy, to bring it closer to home, you should say "I'll call you nigger and we'll have a beer ..."

Since when is racism PC crap? Heard about Bosnia, Rwanda, Sudan, Kashmir?

632. Re: Lightning Protection - What Do YOU Use?

The question was:
>>So the question... what do YOU use for lightning protection to prevent
>>you and your radios from being turned into melted blobs of charred
>>tissue and plastic? Examples of proven designs with their accompanying
>>stories would be of particular interest.
>>
>>TMT

My answer was precisely as laid out by w_tom1. A single point ground system. I had the benefits of many discussions with PolyPhaser after taking a strike, not to my 65' radio tower and antenna, but apparently to the periphery of the house or the telephone company connections. The result was blowing, shattering, destroying 6 feet of ceramic tile at the back of my home. It was thought that the strike may have contacted steel re-bar in the concrete slab of my home. Regardless, some 90 feet from the back of the house the underground phone connection was shrapnel, to a point where the phone company had never seen before. The fiberglass cover to the junction box at the street was found 120 feet away. The phone box on the side of my house was blown off the house. I vowed not to have it happen again. Within weeks, I was invited to attend a Florida Power conference on lightning damage prevention, had numerous calls with PolyPhaser (an outstanding company). The single point ground was designed and installed. Details are at my web site: http://www.knology.net/~res0958z/ along with many pictures of the install. The basics of a single point ground are that ALL points are connected to ONE single point ground so that no variance of potential can exist between any two pieces of conductor. If a variance exists you get current between the differing potentials and current means voltage flows. When all points rise and fall at the same potential, no variance exists. I still cringe when our frequent lightning storms roll in here in Lightning Alley in west central Florida, but I'm certain I'm much better protected now than before my strike.

Weak (S1) but clear USB signal here in central KY at 04:05.
Replay of earlier feed tonight, a program on Vietnam, as in
"good morning Vietnaum".

He is playing a good selection of music.

By 04:07 it had crept up to S5.

This time I think I have my audio wired correctlyand I am recording
this signal on one ch and WWV(10MHz S9+20) on the other.

> his daughters who get attacked first and not innocent families?

Bush and his family has multiple layers of security and whole armies
protecting them, something that the rest of us "little people" don't
have. Since getting Bush is too hard, the terrorists attack the average
American, then use the principle of collective responsibility (he's our
leader, therefore it's our fault) to justify it. Instead of mass
attacks, Al Qaeda needs to send a half dozen snipers to pick off Bush,
Cheney, and the Congressional leadership and their families, and
probably the entire Cabinet too. That would eliminate most of the line
of succession to the presidency, and cause the govt to flail around like
a headless chicken.

Actually, that wouldn't be so bad, I think Bush needs a good rimjob,
just as long as I'm not in DC at the time.

> They drive illegal gypsy cabs, charge 1/2 the price and I get no business. I
> can't support my family anymore. American construction workers are turned
> away but they hire the illegals instead.

That's because the rich bosses can lord it over the illegals and pay
them $1 an hour because the illegals are scared that if they speak up
they'll be deported. If the bosses treated Americans the way they do the
illegals, the Americans would revolt. So they give Americans cushy,
boring, useless office jobs and make the Mexicans do all the dirty work.
>
> Plus these people "pro create" like crazy.

> cause they know the Americans won't let them go hungry and without a place
> to live. Then, their children have kids when they are 16 and 17 years old
> amd so on and so on this the population is out of control like in Mexico.

The rich Mexicans are trying to avoid a rebellion there by siphoning off
all the excess population to the US. In Mexico, a handful of descendants
of ethnically pure Spaniards have held all the wealth from day one, and
have systematically prevented the average Mexican, who is an "impure"
mix of Indian and Spaniard, from geting any pieces of the pie. Mexicans
don't have any education, they don't have any skills, and the severe
lack of jobs or decent living standards (most Mexicans live in squalor,
that's why they're so willing to live in deplorable conditions here in
the US) have turned Mexico into a powder keg. The colonios are trying to
defuse it by shoving their problems on the gringos.
>
> American plan their kids if they can. Can we afford to have kids? Let's have

> But with these peoples culture, they screw like crazy and have no
> responsibility. This country will become a 3rd class banana republic one
> day. They will be able to outvote us like they are doing now. Our voices
> will mean nothing. Heck they mean nothing now.

Most Mexicans have no concept of how money works or how it is created.
They just see that if they go to the US, they instantly have a much
better standard of living than in Mexico. They see free schooling, free
health care, free money, and think that they've discovered the mother
lode, a place where money grows on trees and magically appears with no
effort. And since they only have a primary school (usually fourth grade
or so) education, they have no reason to believe differently. They see
that a handful of US dollars goes a lot farther in Mexican pesos, and
they don't see exchange rates or standard of living issues, they see
magic money. And since they don't have an education, they don't know any
better.

>

> these fucken illegals bastards don't have to learn English? Who is allowing
> this to happen?

This is a new thing. The children of previous waves of immigrants all
learned English. It's hard to learn a new language when you're 50, but
the kids have no excuse. Why are we teaching them in Spanish instead of
teaching them English? Why do they have to go to junior college to learn
English?
>

> mean why not?

Like I said, they can afford rings of security, while the rest of us
have to live in fear. Then they want to take away our guns so that we
will have NO defense against criminals. It's not their problem, they
live behind walls and armed guards.
>
> The lowlife bush "got even" with a CIA agent that said his bullshit Iraq

> hold back YOUR kids from getting a good education by slowing everyone down.
>
> The parents don't give two shits to try and learn our language and their
> kids grow up the same way.

Well, like I said, when you're 50 it's hard to learn a new language. But
the kids aren't being taught in English, they're not learning it, I
think they would be happy to learn it if they had the opportunity, but
all they ever encounter is Spanish. Spanish at home, Spanish at school,
Spanish TV and radio and newspapers. Even their groceries are labeled in

Spanish! In that atmosphere, they not only see no point in learning
English, they never get the chance to do so.

Greetings Frank! Thanks for the reply! Nice to know that you did it on the same radio. The results would undoubtedly be the same. Do you think the BFO kit would be good with any AM radio at all, or is it just too unstable? Also, how much did your KA-1102 cost, and what is the best portable for the money with SSB? I have heard many sing the praises of the 7600, but what is a good second for less money? Thanks a bunch! Have a great weekend! Jon.

That makes very little sense. And of course it was expected.

I too have the ability to view all of the threads as a "tree". However, if I have all of the threads displayed in that fashion I find that there is too much going on at once; it'd take me ten minutes to scroll through all of them from top to bottom to see which threads have new posts. Instead, I (and any number of other people) have filters that hide the posts that we've already read, and we only allow older posts to be stored on our systems for a limited length of time. This reduces the number of posts displayed at once to a manageable level. I daresay that most people have their readers set up in a similar fashion; that's why quoting is so important. Again, it's a common courtesy issue...and your position has been duly noted. I certainly hope that you won't be surprised by any lack of consideration likewise shown to you by other netizens.

While they don't crop up that often for me either, I don't bother to call
the help desks for the very reason that you mention. I just keep plodding
along until I manage to figure it out for myself.

Dee D. Flint, N8UZE

Agreed, Dee. I am fortunate in that I have several savvy friends who are
more than willing to assist me in my times of need. I also find it a
personal challenge to muddle through the glitches as they crop up and try to
resolve them myself. It is a great "hands-on" learning experience.
At least that is how I view it.

I guess it is a trade-off, eh? Spend two hours on the phone listening to
canned music or spend two hours figuring it out for one's self. As you said,
it doesn't crop all that often.

Good point. I should have been more precise and said that many US state governments are too quick to ship jobs overseas. An irony in all of this is that many of the social assistance programs are managed out of country. If the jobs were kept in North America, there would be far fewer people needing the services of the very people that deprived them of a possible income.

Check the following link for some info.

http://www.belfuse.com/Data/DBObject/fuseprodguide.pdf

Schurter used to have a nicer guide for fuse selection.

I once had to specify fuse values for an application. The basic premise is to choose a current value twice that of the maximum steady state. The other way required measuring in-rush current for the first 10 ms, and then calculating it from the values.

Fast acting fuses will blow quicker, so you usually have to rate them higher to avoid nuisance blows.

It's always best to put a fuse after a power supply or source that can produce high and damaging currents.

Hi DX99,
I had EXACTLY the same problem with mine some years ago. I remember it was a bad joint on the RF board where the band pass filter switching diodes are (not difficult to find them out !). I re-soldered all of them and .... that was it.
Hope it helps !
Drop us a line after the repair and let's know if it was successful !
Have a nice sunday

I have a quick disconnect to the long wire antenna and it's disconnected when not being used. During storms I always check the SW radio and my new LCD TV to be sure they are totally disconnected, antenna, cable and power!

My antennas here (70' and 200' wires) are transformer matched and grounded at the feedpoint. From there the coax runs underground to the basement where they enter Transi-Trap devices which are grounded. Up from that point the coax goes to a antenna switch. When I'm not listening, at least in summer, I disconnect the feed to the receivers.

That's what I do too Jim. My switch terminates the ant to grd. My point is
that most casual listeners with modestly priced radios will not go and spend
hundreds or more on adequate lightning and ground systems for their radio
they just bought on Ebay for $200. But they can or will buy a ground rod and
a good ant switch with a grounding lug and unhook the radio when not in use.
I don't know why they can't see the point I'm trying to make.

I have the impression the power companies are using some sort of SCR
controlled resonant transformers for the DC to AC power conversion, but I'm
not sure.

model.

Reactance, itself, shouldn't cause a loss. A pure reactance doesn't
dissapate any power. Standing waves will increase the current on parts of
the line and increase the resistive losses. Standing waves will also
increase the voltage on different parts of the line and increase the risk of
arc over. The line is very close to the ground in terms of wavelength and
ground losses must also contribute a bit. I'm sure AC power transmission is
generally lossier than DC power transmission at the same rms current.

The bandwagon is with the Kaito KA-1103 / Degen 1103 at the moment. Import directly from China for around US$65 with a 220VAC power pack and 110/220 stepup transformer, or from a US distributor for up to US$100 with a 110VAC power pack and US service centre - both with 1 year warranty. Amazing value for money at either price. 600 member user group at http://groups.yahoo.com/group/kaito-de1103/ .

> cables?

No.

As long as the smallest cable is big enough to pass the necessary current, it doesn't matter if you also have a larger cable in the circuit. I note Radio Shack rates the 270-025 cable at 4.6 amps, so it's more than big enough for your equipment.

> 2] You say the higher voltage rating for the fuses keeps the power from
> arcing. How is it determined what voltage rating you should use? By the
> voltage that is going to flow thru the wires or by what the PSU can put out?

Well, both voltages (that which will be in the cables, and that which the PSU puts out) are the same, 13.8 volts.

The voltage rating of the fuses must be at least as great as the voltage on the circuit you're protecting. You should have a reasonable safety factor; the voltage rating of the fuses should exceed the actual voltage by at least 2x - i.e., the fuses should be rated at least 28 volts in your case.

I've never seen a fuse rated at less than 32 volts, so you shouldn't have a problem. 250-volt fuses are fine.

...and it doesn't have to be even a few hundred. A PolyPhaser costs between $60 and $90, depending on how fancy you get, but even a "simple" one at 3 times the cost of a competitor's model, installed properly, will do a good job, it's a bargain.

"Installed properly" is an important issue. The thing about lightning mitigation is that you have to be positively anally-retentive about setting the system up properly. One TINY mistake and your system doesn't do crap.

How tiny a mistake?

If you had a tower, the difference between running your coaxial lines to the ground level before heading over to the house and running them off the tower at 8 feet above ground is the difference between no damage and complete destruction.

PolyPhaser has a number of papers on their website, some of which are oriented towards hams and SWLs. They are worth your time.

(I have no affiliation except for being an extremely satisfied customer who has survived a direct strike on an antenna -- and PolyPhaser wanted to exchange my supressor so they could study how it did.)

> . Everything was on a different circut.

...this is one of the reasons that you want to have a lightning
mitigation system. Taking your equipment off the antenna would seem
like the logical thing to do, but now, where's the alternate
low-resistance path to ground? You have none. The lightning has lept
the distance from cloud to ground -- another 10 feet isn't going to be
difficult.

See my earlier post on PolyPhasers. They work when properly set up,
they aren't that expensive, and they keep repeaters, radio stations,
television stations, ham rigs... and my radios going through direct
strikes.

I see nothing wrong with using existing ideas as starting points. At the very least, however, credit has to be given to the originators. If there are fiscal agreements in place, they have to be lived up to. It would appear the 'corporate entity' allows individual thieves to cover a lot of dishonest activity.

It appears that magazine has become dumbed down for the supermarket magazine stand . That's usually the start of the downward spiral towards extinction. I loved Martin Gardner's articles and later bought Hofstadter's book because of that magazine.

As with another response post, I've heard good things about the KA-1103. I really like my KA-1102. IT has a true product detector for SSB and a variable BFO thumbwheel for USB/LSB and SSB copy is quite good for a portable, actually better than the ATS-909 that I previously had. Sensitivity on just the whip is excellent. It has a few operational idiosyncracises but these are minor and you get used to them. (e.g. you can only use the BFO when in page # 9). I think I got mine for about $75 over a year ago.

Good point from DK! These receivers are absolutely notorius for solder joints that go bad over time. I have several friends with R-71As that have had numerous solder connection problems over time but have been able to fix them themselves. The radio is a "rat's nest" of cables and wires inside unfortunately.

Funny how that works. Somedays I think I've forgotten more than I've ever known,
which wasn't much.

> is there capacitive reactance to consider as well (such as the value between
> the line and the other line (parallel transmission lines) and also earth
> ground (typically some 150 feet or so below the wires in question)?

Sure, in Ac..but it is in the opposite direction on the impedance triangle than
the inductive reactance, so XC is subtracted from XL, leaving some resultant.
There are some pretty bizarre asymmetrical waveforms that happen during faults,
but the math is beyond me.

I found this site very helpful. It even mentions the Tesla connection to the
Niagara falls hydro installation.

The above URL claims roughly seven percent losses in distribution, but I
couldn't find any breakdown as to what percentage of that was in DC lines.
I'm not sure how you would go about 'tuning' a line. The power company may take
a dim view of me changing the length of wiring up on the poles. I could perhaps
try a centre tap later tonight...far away from that pesky noise inducing meter

Hello:
New at this.

The Norad freq.: NORAD : 364.2

Is this AM ?

Might as well also ask. Where (at what freq's) do the Mil aviation freq's
switch to FM ?
Would this be "narrow fm," or regular fm ?

Thanks,
B.

Hi Frank, you haven't started improving the KA-1102 yet? The 1103 has quite a lot of mods already developed by a Russian enthusiast http://lab.radioscanner.ru/review/degen2.php. I have an 1103 and it gives my DX-394 a bit of a chase. I'd say it's a better SSB receiver than the 1102 as far as operating convenience goes. There is a SSB on/off switch that can be used on any frequency except VHF and all 260 some memories can be used for any mode. It has a product detector and BFO fine tuning with a range of about +/-1.5kHz. Switchable fiilters are usable in either AM or SSB mode. I'd say the narrow filter is sharper on the nose than the DX-394's but the skirt is shallower. By offsetting the BFO by 1kHz, you get a degree of opposite sideband suppression, not as much as with the DX-394 or better radios. I have even used it to listen to AM in ECSS (or maybe just EC) mode - zero beating takes a fine touch and it does not hold for a long time but works well on USB reduced carrier transmission from CHU and is not too bad on speech programming. The fact you cannot offset far enough to shove the carrier down the filter skirt makes music programming sound pretty awful without an exact zero beat. Maybe the next generation will have a synchronous detector!

SYDNEY • A Chinese diplomat from the Chinese Consulate in Sydney, told a June 4th Commemoration rally for the Tiananmen Square Massacre that he had sought political asylum in Australia.

Mr. Chen, a former 1st Secretary and Consul for Political Affairs, said that he and his family had left the Chinese Consulate a week ago to defect. He said that his job in Sydney had been to •monitor• political dissidents and Falun Gong practitioners in Australia, but that he had become disillusioned and could no longer support the CCP•s persecution.

Mr. Chen said that the CCP has •thousands• of secret agents in Australia who monitor and report on Falun Gong practitioners, and try to interfere with their activities in Australia. He said this is normal policy for the Chinese Government.

Mr. Chen said that he had met with officials of the Australian Department of Foreign Affairs (DFAT) on Tuesday but that they had refused him political asylum, and told him to apply for a refugee protection visa instead.

Frightened

Obviously agitated and anxious, Mr. Chen stumbled over his words at times. "DFAT told me the Chinese Government wants me back, and Australia doesn•t want me", he said. "They obviously don•t want to offend China."

Mr. Chen told the rally that he had been in hiding with his family, and was being helped by "supporters of democracy". He said that he feared for his life, and that this was the reason he had spoken out in public, hoping that the Australian Government would help to protect him.

He said that he had given the DFAT officials details of three kidnappings of Chinese defectors or dissidents, and said that two of them had been sentenced to death in China.

According to Chen, one person had been kidnapped by Chinese agents in Australia, and had been taken by small boat from the coast and transferred to a Chinese cargo ship at sea. The dissident was executed upon return to China. Chen said that he feared that the same thing would happen to him if he and his family were not given asylum.

Mr. Chen said he was ready to give out details of the CCP agents' activities in Australia, and of the persecution of Falun Gong, in exchange for protection. He promised to reveal to Australians "everything I know" about threats by Chinese foreign agents "to the Australian society and its people".

A spokesperson for DFAT was reported to have said on Friday that Mr. Chen had applied for a protection visa to the Immigration Department, not for political asylum. Mr. Chen insists that he applied for asylum. After speaking at the rally, Mr. Chen went back into hiding.

CCP Hires Special Agents To Manipulate Internet Opinion

The CCP Creates Internal Commotion to Distract People from the "Real" Issues in China; People in the Rest of the World Should See This Clearly.
...
It is the CCP and some evil capitalists who see only profits, fighting a battle against the political forces in the U.S. that pursue justice, democracy and freedom. The CCP extends its influence in various aspects. They not only hijacked 1.3 billion Chinese people but also used its clout abroad and attempted to block democracy and freedom in Western society. The consumer market of 1.3 billion Chinese people, had such a huge potential for profit that almost no businessman could reject going along with the CCP. Therefore, many major American consortiums do not dare to offend the CCP. They would rather do business with the CCP and hold out in hope that the CCP "s banks do not become bankrupt. Actually, the CCP"s banks have been bankrupt for a long time. The reason that it still does not announce the banking system"s breakdown is because these businessmen from Taiwan and the U.S. are constantly infusing new money into China. However, this influx of money would stop if the foreign businessmen knew that China"s banks had gone bankrupt. These foreign businessmen are actually doing the same thing as when Western businessmen supported Hitler, who then used the money to create evil and destruction.
...
Foreign businessmen will be jailed in China if they are not careful. They may be involved in bribery cases just because they can"t settle the fight over mutual profits with the Chinese officials. In fact, nearly every businessman in China will have to become involved in some kind of bribery. Those who are honestly and conscientiously doing business will not be able to make a profit.

> Bill Turner wrote:
> Since when is racism PC crap? Heard about Bosnia, Rwanda, Sudan,
Kashmir?

Yes.

Those are four countries which should have been left up to their
own devices and not rcvd on dime of Foreign (USA) Aide.
Bosnia is populated by the descendents of migrating gypsies who want to
set up a quasi-Islamic State right on Europe's doorstep. They just may
get the chance now thanks to Bill Clinton's intervention in the former
Yugoslavia in the late 90's. Bottom line is that country and it's neighbors
were much better off under Tito who kept them in order with an iron rod.
When he kicked off you saw Yugoslavia go right back to it's pre - WW-I
borders and the conflicts of the turn of the last Century flared up again.
This area has been a historic breeding ground for hotheads anyway going
back several hundred Years.

As for Rwanda and Sudan, here you have a classic case of religious fervor
mixed with a climate and landscape not unlike the moon (albeit hot and dry)
and a race of people who breed like hedgerow rabbits. Anyone with even a
partial working brain can see this is a powderkeg just waiting to go off.
There's too damm many people in Africa anyway, overpopulation run
amuck with rampant Islam and corrupt politics, so you can be sure that
Mother Nature is going to do her best to cull this herd for sure! She's
doing
it right now via HIV, desertification and climate change. Sit back and
watch
M.N. in action kids! Amazing how she can clear off the land of the human
locusts and yet leave the raw materials intact eh? Sort of like a Neutron
Bomb
in slo-motion....

Finally we have Kashmir! A disputed border region being roe'd about by
Pakistan and India. Two countries who have two greatly opposing religions
and a population that breeds like field mice...and best of all...THEY BOTH
HAVE NUCLEAR WEAPONS!! Now this is a comedy act we really need
to watch very closely folks. I will never forget seeing the video of
ignorant and
inbred pakistanies a few years ago, riding atop a fake nuclear missile prop
in a victory parade urging their Govt. to launch a real one onto Deli or
Bombay.
This was the 'paki' version of "Dr. Strangelove or How I Learned Love The

Bomb" with Dr Kahn playing Peter Sellers. Here you have a group of people who would love to see parts of India glow with radioactivity, and yet they forget
that the fallout would rain down on Pakistan afterwards! (talk about nuclear
Darwinism!) The Indians are not much better, they believe in 1000 different gods and are not worried if they get nuked because they will come back as a monkey or a cow or some other mutated form of life. One wants to nuke Krishina for Allah....the other wants to nuke Allah for Krishina....GO FIGURE!

Know what I say folks...? LET THEM KILL EACH OTHER OFF !

There are too dammed many people on this Planet anyway, and the masses of candidates for a mass-culling are, for the most part: stupid, easily led by
religious craptrap, uneducated, and baby-making machines. In short an army of biomass which is incapable of intellectual advancement, which thus must advance itself via sheer numbers by rampant biomass and unrestrained breeding.
A living cancer on the face of the planetscape. Yes, let them kill each other off
via Mother Natures help. She's already giving us a warning that the planet's reserves
of petroleum products have reached their peak (look up 'Peak Oil' on google) and
it's all downhill from here folks. The 3rd extinction has begun and it has been caused
by HUMANS!

In closing , let me remind you of the words of the Georgia Guidestones:

1. Maintain humanity under 500,000,000 in perpetual balance with nature.
2. Guide reproduction wisely - improving fitness and diversity.
3. Unite humanity with a living new language.
4. Rule passion - faith - tradition - and all things with tempered reason.
5. Protect people and nations with fair laws and just courts.
6. Let all nations rule internally resolving external disputes in a world court.
7. Avoid petty laws and useless officials.
8. Balance personal rights with social duties.
9. Prize truth - beauty - love - seeking harmony with the infinite.
10.Be not a cancer on the earth - Leave room for nature - Leave room for nature.

They say it all !

TMT,
.
Far-End-Fed 'Low Noise' Inverted "L" Antenna
- 25 Foot Vertical-Up-Leg
- 75 Foot Horizontal-Out-Arm
Laid Out : North-to-South
Antenna Element : #14 AWG Insulated Stranded (19) Copper Wire
Matching Transformer (UnUn) : RF Junkie "SWL-1" 10:1 MLB
Remote {Primary} Ground : 8 Foot Ground Rod
Feed-in-Line : RG8 Coax Cable
Shack's Ground : 8 Foot Ground Rod
Feed-Line-Isolator : : RF Junkie 1:1 UnUn
.
Antenna-and-Ground System :
The Feed-Point of the Inverted "L" Antenna is at the Far-End
of the Antenna away from the House. At the Bottom of the
Vertical-Up-Leg of the Antenna a 'remote' earthen Ground
Rod is installed in the Ground. The Matching Transformer
(UnUn/MLB) is Mounted directly on the Top of the Ground
Rod. The Feed-in-Line Coax Cable is run directly under the
Horizontal-Out-Arm of the Wire Antenna Element; and is
Buried about 6"-8" under the surface of the ground. The
Feed-in-Line comes out of the ground near the House and is
connected to a Feed-Line-Isolator that is mounted on the Shack's
Outside Ground Rod using two Hose Clamps on the two PL-259
Plugs connected to both ends of the Isolator. The second 20 Foot
piece of Coax Cable goes up to the Shack's Antenna Switch that
is tied to the Shack's Ground. Finally a 3 Foot piece of Coax
Cable is connected to the Receiver which is also tied to the Shack's
Ground. When the Receiver is not in use the Antenna Switch is
'set' to the Center "Grounded" Position.
.
Got the Idea for this Set-up from the Wellbrook (UK) webpage for
Low Noise Antenna using the Universal Magnetic Balun and the
Antenna Feeder Isolator. Take-a-Look & Check-it-Out :

679. Alice's Restaurant Rock Radio - 9290 kHz short wave on 14 August 2005

Newsgroup: rec.radio.shortwave
Date: 2005-06-05 16:33:54 UTC
From: Mike Terry <miketerry73@btinternet.com>

Source record: 24218

Classic Rock Radio Society Press Release:

No funk, No punk, no junk!

Described in the national press as a "rock giant", London's legendary album station; Alice's Restaurant Rock Radio, returns to rock your radio, on Sunday 14th August 2005!

However, this time round Alice's isn't just aiming for part of London & suburbs with a small 50 watt pirate radio transmitter. Alice's is targeting the entire European continent, via a very powerful transmitter & antenna, producing a perfectly legal 3.2 million watt signal, which can be heard anywhere in Europe. All you'll need is a radio that covers 9290 kHz short wave. Many people have short wave but never use it, as there's nothing of much interest to listen to on short wave, until now.

Station Manager, Bear Freeman; "The staff of Alice's will once again take the pioneering role, by way of being the only radio station broadcasting a genuine rock format on ordinary portable radio, that can be taken anywhere. There has never been anything like this for European rock enthusiasts, who can now, at last, turn their own radios on and hear their own music. The format will encompass all genres of rock music, and even rock comedy appropriate to members of the rock community, which we originally introduced to the UK during the 1970's. We've been around for a long time and we intend to continue to champion rock radio, widening radio listener's choice and expanding Alice's short wave transmissions. Keep an eye on the Alice's website for details".

Alice's rock jocks confirmed so far include; Bear, Nigel Grant, Scare, Dave Robbie; all veterans of rock radio, some of whom have been broadcasting since the mid 1960's. Collectively these guys have provided more rock radio over a longer period than anyone else!

Programs will be produced in studios at the heart of Alice's old stomping ground; the north eastern borders of London.

Outside short wave broadcast hours, Alice's is also
available 24/7 as a CD quality web stream. See the Alice's website
for details.

www.rockradio.eu.com

Turn on, tune in, ROCK OUT!

Alice's Restaurant Rock Radio:
www.rockradio.eu.com

London's legendary album rock radio station; Alice's Restaurant, will re-launch, and start pilot test transmissions, for a pan-European *real* album rock radio service.

Inspired by Europe's first big album stations; Radio 428 & Geronimo [1969/70] pioneers of album rock radio, who have championed the cause since even earlier in the 60's, will be involved in the project. Though it's been said about other radio stations, Alice's is arguably the station that discerning rock enthusiasts have been waiting over thirty long years for!

Back in the 1980's like London's Kiss FM, Alice's Restaurant was an fm pirate station. With a team which includes members who have provided album rock programming on various landbased pirate rock stations since the 60's, it's perhaps not surprising that Alice's has an impeccable reputation for playing 100% album rock - AC/DC to Zeppelin, Aerosmith to ZZ Top, Accept to Zappa, and that's just a few A to Z's, there are many more rock bands who received a jolly good airing, that are simply too numerous to mention here. Put another way, it's easier to list the ones that weren't played..... (much more on the website...)

Hi Doug

Thank you once again for your knowledge. As I proceeded with the hookup procedure, I decided to change things.

The DC cable with the fuse holder is 4Ft long. The extention Adaptaplug cable is 6ft long. I bought both since I figured I'd keep the Astron PSU as far from the radios as possible. So that's like 10 ft long together.

I'm going to keep the PSU under my glass/wood radio table and now 10 ft just seems too long. I don't want uneeded lengths of wire around the radios that cause clutter and may pick up local RFI.

So, I've decided to just go with the 6 ft of Adaptaplug cable, cut out the fuse holder from the other 4 ft cable and solder it in line with the 6 ft adaptaplug cable.

Problem is, I tried looking up the current rating capacity of this adaptaplug cable. I can't find any specs on it's properties on RS's site like it shows for the 4ft DC cable. The part # is 273-1740 for the 6 ft adaptaplug cable I want to use for the entire length.

Do you think this cable has the needed current rating for my use? This cable's wires are much thinner then the other cables 22 AWG size. I can't even find the adaptaplugs cable AWG.

Can I use it safely? What do you guys think? I think most of these adaptaplugs cables are used for wall worts.

Lucky

Hi Terry

That's a good idea taping these pirate stations. I've been wanting to pick up a tape recorder for a while now but have been putting it off. I need to get a decent one. Some times Coast to Coast has some good guests on and I fall asleep before it ends 5:00 AM EST.

Like Art Bell had this Russian guest on last week who was talking about all the secret U.F.O. reports Russia supressed during the cold war.

It was great interesting stuff. The guy even has a ebook out for downloading on all of it. I wished I would have had that whole program taped.

Industry sources explain why earthing exists atop skyscrapers - which is well beyond the scope of this discussion. If one has problems with this, then they can take it up with those 1930s GE scientists. Skyscraper height is not relevant here. Earthing connection must be short: ie 'less than 10 feet' for each incoming utility wire.

The point: protection is only as effective as the earth ground. Single point earthing as discussed previously by Polyphaser and at
http://tinyurl.com/ao36t

Earthing even required for underground utility wires. A buried wire may carry destructive incoming transients as described by a Polyphaser tech note and demonstrated by this application note entitled "The Need for Coordinated Protection" from another industry professional:

http://www.erico.com/public/library/fep/technotes/tncr002.pdf

Note the earthing system demonstrated by r2000swler. Same concept of a good, bad, and ugly earthing system is also demonstrated by a utility:

Early Hams would disconnect the antenna and even put that
lead inside a mason jar. They would still suffer damage.
Another here demonstrated the concept in discussing arcs to a
concrete basement floor.

Earthing even a disconnected antenna is necessary.
Furthermore, earthing without disconnecting costs so little
AND is so effective. Disconnecting or protectors alone are
not protection. Protection is earth ground. Everything else
is only as effective as the connection to that single point
earth ground.

USA has a staunch ally in the dictator of Uzbekistan, Islam Karimov. Like Saddam, Pinochet, the Shah of Iran, Samoza, and many others, Karimov sponsors torture and massacres of his own people. He has succeeded in pushing the traditional Sufi version of Islam toward fundamentalism. 1,000 unarmed were killed on 13 May 2005. We'll hear alot more about this country in the future, unless a better understanding of how anger at a brutal regime propped up by a foreign power can fertilise overseas violence and terror. Can't understand how this simple lesson is not learned.

A couple months ago, long before the recent mass murder, Economists
Magazine nominated him the second worst dictator in the world. Second
only to Kim Jong Il in NK.

To: "Drifter"@PGH.net

Drifter,

Yeah, the British government is considering scrapping fuel tax and
replacing
it with a new road charge based on the distance and time motorists
travel.
And now they want to remove Bibles from hospitals (see attachment), and
now
a crucifix has been taken down at Newham General Hospitalï¿½s chapel in
East
London. Instead, there was a bowl used by Muslim worshippers to wash
their
feet before they pray. This last stunt was reported in the Daily
Express on
Saturday, June 4. Please pass this information on to anyone you know.
If
itï¿½s happening here, it will most likely happen in the United States (if
itï¿½s not already happening). Christians cannot let this sort of thing
happen. The move by the hospital was condemned by the Evangelical
Alliance
last night (the article continues). General Director Joel Edwards said:
ï¿½Itï¿½s particularly hard to understand ï¿½ bemusing ï¿½ as other faiths have
never shown or expressed any disquiet about the presence of Christian
literature and specifically the Bible being on display. In a
multi-faith
society we have a responsibility to ensure that people of all faiths

have
room to express their faith. But to do this to the exclusion of
Christian
faith is not only absurd but is ludicrously unequal.ï¿½

http://news.bbc.co.uk/1/hi/england/leicestershire/4605827.stm

Sound familiar? Remove prayer from schoolsï¿½canï¿½t display the Nativity
at
Christmasï¿½removal of Biblesï¿½what next?

Excuse me while I get my prayer mat !!!

Forget about gay and lesbians and start making a herd load of babies and you wouldn't have an emigrant problem in Europa.
But the Socialist NeoComs are brainwashing you with population control and nursing your egos' need to consume instead of invest in the future generation.

Most mil aero UHF, ie above 200 is going to be AM.
Most comms from 30~75MHz will be FM wide (not as wide
as comercial FM wich is 75KHz, but 50KHz
Most comms from 136~150 will be FM-N.
There are exceptions. I have heard SSB in
both the 30~75 range and above 200.

Good listening.
rec.radio.scanner mihgt be a better choice for this
topic. Thre ar some very sharp people over there.

Source record: 24236

How long do you think it'll take before I'm persecuted. . .oh, I'm sorry, "brought to justice". . .(I forgot the Jews hold the mortgage on "persecuted") for expressing my First Amendment rights?
--Manxman

National Public Radio Application for Employment

Here are our basic criteria for consideration. The "correct" answers are supplied in parentheses. Any applications that deviate from our high standards will be used as placemats for our pastrami and lox lunches and summarily thrown out.

1. Gender:

a) Female
b) Effeminate Male
c) Homosexual Male
d) Male but guilty about it, have a lisp, and am considering a sex-change operation
e) Normal heterosexual male

(a,b,c, or d.)

2: Race:

a) White
b) Negroid
c) Jewish
d) Hispanic
e) Asian Indian with an unfathomable name like "Sneedek Ungrapradesh"
f) White but can manage convincing or empathetic pronunications of "Neecarlagua" or "Barheeo" that suggest I actually hang out with Spics in dangerous neighborhoods

(c,d,e,f, or b if we need a token nigger)

3: Religion

a) Jewish
b) Reform Jewish
c) Unobservant, secular Jew
d) Atheist Jew
e) Lapsed Catholic but I've been interested in the Kabbalah lately
f) Lapsed Episcopalian but I have a lot of Jewish friends, really
g) Unitarian Universalist

(d,c,b,a,f,e,g) in that order

4: Education:

a) CUNY
b) Columbia Journalism School
c) Berkeley
d) Brown
e) The Hebrew School
f) Wright State University

(a,b,c,d,e)

5: Marital Status:

a) Married to any influential male in New York or Washington who feeds me news leaks and would be glad to see me trot off to NPR every day so he'll be out of earshot of my all-knowing, smug, pseudo-intellectual voice
b) Single, no one can stand me because I'm a yattering harpy or a fey excuse for a male
c) Divorced, no one could stand me because I have a nasal, whining, supercilious voice that never stops
d) Divorced more than once, absolutely no one could stand me because I'm a neurotic, hectoring termagent with serious mental problems

(d,c,a,b)

6: Where is Indiana?

a) Somewhere west of 42nd Street
b) I think it's next to Idaho, isn't it?
c) West of Louisiana

(a,b,c)

7: According the the FBI's Uniform Crime Statistics, what group commits the most violent crimes per capita in the United States?

a) Young lazy black males
b) Young lazy Hispanic males
c) Working white crackers in the Midwest

(c) despite all evidence to the contrary

8: What is your conception of the American Midwest?

a) A large agricultural and industrial region that was the engine for much of America's growth and prosperity, settled mostly by white European immigrants whose work ethic, honesty, and devotion to family made it a safe and enjoyable place to live

b) A dark, forbidding, uncharted no-man's-land I've flown over on the red-eye from L.A., inhabited by inbred German farmers with huge gun collections and a seething hatred of Jews and nonwhites. No good delis. Useful for occasional "color" features to lead listeners to believe we know where it is.

(b)

9. On your desk are two possible story leads in Dayton, Ohio for "Morning Edition" handkerchief-wringers. You have a four-minute slot to fill and can only use one. David Kastenbaum has been booked for a fast flight out of JFK and is nervous about being so far away from a deli and being beat up by crackers, but he's agreed to interview your choice. They are:

a) A white high school student in traction who was set upon by a gang of African-Americans who gave him a "curbie," blinded him in one eye, collaped a lung, broke four ribs, and deprived him of a football scholarship by crushing his kneecap. They needed his lunch money for wine. The student is only the latest in an alarming pattern of black-on-white violence at a large high school.

b) Linda Wertheimer's nephew by her sixth husband, a homosexual associate professor of comparative literature at Wright State University, was called a "homo" by a white who rejected his advances at the local Starbucks. He's had to increase his antidepressant dosage and psychotherapy visits and take a leave of absence until he recovers. Possible angle is the alarming rise in "gay-bashing" in the American Midwest.

(b), of course

10. An Israeli Jew with a fake passport was arrested on the Ohio Turnpike with $20 million worth of the dangerous psychedelic drug "Ecstacy" in his trunk. The state troopers had to Mace him when he resisted arrest. It's well-documented that Jews run the Ecstacy trade worldwide and most large seizures of the drug have involved Jews. We have no stories in the pipeline this morning on homosexual New York performance artists or Zimbabwean naturalists fighting to save the rare Bukkake Beetle from extinction as white farmers are raped and slain all around them. We may have to run this story. What spin should you put on it?

a) The questionable legality of search-and-seizure laws under current interpretations of the Fourth Amendment

b) The alarming increase in police brutality in the American Midwest

c) The alarming increase in "racial targeting" methods employed by police in traffic stops

d) The widespread destruction and increasing dissipation of white American youth, especially impressionable females, through the use of a drug formulated and marketed exclusively by Jews reaping huge profits

(a,b, or c). Don't even THINK about (d).

Really? A friend of mine makes over half his income from repairing lightning damaged radio stations here in Florida. While I was the engineer at WACX TV lightning hit their studio building in Leesburg Florida. It took ot the entire telephone system, the main computer, all the terminals, all the LNAs on the C-band dish, most of the receivers and the 11 GHZ CARS transmitter that fed the original transmitter site. It took months to repair everything, including replacing the vaporized grounding system. true, if you're in an area that rarely get nearby lightning strikes, but there have been storms here with over 1100 strikes in 30 minutes. The continuous EMP weakens things, and there are a lot of failures because of this. I lost all three video amps in a computer monitor when lightning hit the water behind my workshop. It wasn't plugged in, and the video cable was wrapped around the tilt stand, yet enough voltage was induced into the cable to blow a crater in the video amp chips. A battery powered digital thermometer hanging on the wall exploded. The IC was vaporized and a hole burnt in the circuit board. In truth, there is little that can be don to protect you from a direct lightning strike. AM radio towers have a huge spark gap at the base to protect the insulator, but damage to the antenna system are common. Also, a lot of stations have a spare transmitter that's already hot, so they can switch over and get back on the air, "In a couple seconds"

Go to your locla goodwill or other thrift store.
Pick up a VHS deck that appears to be in good
physical shape and isn't too dirty.
Power it up and see if it will load and play a tape.
Over the last few yers I have bought several VHS decks
this way and they allworked and only needed head
adn tape path cleaned.
The last VHS deck I got was a steal. S-VHS, with
the manaul and remote for $3. After a complete
cleaning, it is now the off air deck from my radios.
I use a real cheap "computer" camera that produces
NTSC to lock the VCR up. Many will lock up just fine
with no video but this one was stuborn.

I like to capture odd signals with WWV in one ch and
the target in the other. Makes it real easy to see what
happens when.

I try to cpautre to my Pc, but I don't want just to leave
my PC recording all night. While I most often use SP/2Hr mode,
LP/4Hr and SLP/EP/6Hr works fine on macines with "HiFi"
audio. the audi is recorded with the video as is much better
then the tiny linear audio tracks.

I bought a Teac 8CH mixer for $10 and use it to mix the
various sources to my VHS or PC. Sounds complex, but
it is real easy to use, after I got it wired up correctly!

I have thought of buying an Ipod to use as a recorder, they
capture as MP3, have USB for fast upload to a PC and are
selfpower and pretty RF quite. Belkin makes a $30 add on
that converts it into a recorder. But unless I can find one used,
I doubt if I will spring for one as they are just too pricy.

Terry

No. Iran's problems started with the colonial predecessor, the British who overthrew the gov't that looked like it was heading toward democracy and installed the shah. The US took up the banner.

You forgot to say that the CIA trained bin Laden.

The expedient definition of a gov't worth supporting, and the contrasting claim to bring freedom and democracy to others with very similar gov'ts by overthrow, invasion or destabilization looks pretty two-faced. And it creates grave risks for us all even if it appears to work in the short term.

Do you write this drivel every time, or do you copy and past it?
Once again, your knowledge of a number of systems is evident. I have seen a lot of damaged telco equipment. In fact, I've been in the Sprint warehouse in Eustis, Florida where they had skids full of lightning damaged circuit boards being sold as scrap. If the wire is never damaged, why do they build their plant with extra pairs? Those pairs are exempt from tariffs, as long as they are only used to replace a damaged pair. I lost my underground phone line when lighting struck an old barn on our property. We had a light out there, so lightning got into our electrical service. Everything critical was on plug in MOV protectors and they all survived. The lightning jumped from the underground power line to Sprint's buried line which they had installed a few inches from the existing buried power line. The pair of wires was vaporized to the street which was over a mile. It wiped out the line card in the pedestal, and the pair back to the CO was damaged. All 16 customers fed by that pair had excessive noise on their phones so they had to switch to one of the spare pairs. That lightning strike did thousands of dollars worth of damage to their equipment, and took weeks to fix. Now, tell us again that Telcos don't suffer lightning damage.

Expect it to arrive here, if it isn't already present. I made the statement, years ago, that the two fairest taxes are the sales tax and toll roads. It isn't fair to tax those who have (owners of real estate) to provide for those who never tried to have or had some awful priorities such as throwing their money away on booze, broads or drugs. :-)

"Income" is a terrible tax because it punishes a person for trying to accumulate something, while letting those in black market trades get by without paying it.

Bootleggers, drug dealers, prostitutes, con men and spies all spend money. Therefore, the sales tax collects from ALL regardless of the source or legality of their income. Likewise, the road tolls. The roads are paid for by those who use them. If you order something by mail or truck then you help to pay for the roads, indirectly, because the user (truck lines, etc.) has to pass the tax along to his customers.

BUT!!! Wicked men will attempt to find a way to abuse anything.
Ecclesiastes 10:2 tells us, "A wise man’s heart directs him toward the right, but the foolish □man’s heart directs him toward the left."

[New American Standard Bible : 1995 update. 1995 (Ec 10:2). LaHabra, CA: The Lockman Foundation.]

This might explain a lot about the choices politicians make!

Another verse comes to mind. II Timothy 3:13, "But evil men and seducers shall wax worse and worse, deceiving, and being deceived." KJV / AV

Also, Scriptures tell us that the most wicked of all kingdoms is coming, is going to be very short lived and after that Jesus Christ is going to set up His kingdom ON THIS EARTH! This is what has the wicked so frightened. They FEAR and TREMBLE at the thoughts of Jesus Christ setting up His kingdom on this earth and their actually having to give an account for all the wickedness they have done.

I believe we are entering those times right now. Christians will be persecuted from ALL "legal" systems. It is very difficult for them to get justice in the courts already. Scriptures tell the Christian to train up his children in the way God would have them go. The courts tell them to let some atheistic, unionized, God hating goof ball train them in the way the state wants them to go. It's "legal" for a woman to pay some Christ hating jerk to rip her child from her body and flush it down a toilet or sell it's tiny body parts. It's "illegal" for a person to stand on a sidewalk and attempt to talk a woman out of having her baby butchered that day! Go figure!

It's going to get MUCH WORSE before it gets any better.

HOWEVER, God protected the Hebrew Children, descendants of Abraham, Isaac, and Jacob, from EVERY ONE of the plagues He brought up Egypt.

God protected the three Hebrew boys INSIDE the fiery furnace.

God protected Daniel IN the lion's den.

Read Matthew 24. Don't expect the "secret rapture" that so many of the churches tell us about. Read Hebrews 11. God is ABLE to deliver, but some went through some awful tortures in the past and the future will be even worse. God will provide the strength and stamina for the faithful when the time comes.

I noticed in the paper recently that Elizabeth Dole, a "right wing conservative" - MY EYE, is planning to vote for CAFTA (?) Central American Free Trade Agreement. Remember that it was her husband, Robert Dole, who PRETENDED to be against NAFTA but when the time came he did the arm twisting to get it pushed through. But that's a whole new topic of its own! I'll not go with it yet!

It does tend to show that step by step the whole earth is being formed into that ten-toed kingdom made of iron and clay (non-cohesive) which will attempt to overthrow God and His kingdom.

Stay tuned! It's like a trip to King's Dominion. It's going to be a very bumpy ride, but it'll be a lot of fun when God's plan is finally worked out. Actually, it's being worked out now. He's a GREAT CHESS PLAYER! He's just letting Satan *think* he is winning - for a while. :-)

Hope this helps.

706. ID assistance for a Brazilian station

Newsgroup: rec.radio.shortwave
Date: 2005-06-05 23:43:28 UTC
From: Tebojockey <tebojockey@secure-tunnel.com>
Message-ID: <g537a1p3kfuagppsrepsl3d3366pck3a60@4ax.com>
Source record: 24245

Folks, I had a great opening to Brazil the other night and got a station on 4775, which I'm not too sure of. Horrendous static crashes and high speed data on channel were maddening!

Anyway, this started around 0944 GMT on 4775. The announcer truly believed in the "Power of Echo" as that effect was on constantly (or maybe it was studio room acoustics).

Played standard Brazilian pop. Several times I heard an ID, and several times in that ID I heard "liberal." Now, there was a Radio Liberal out of Belem on there, but the WRTH says it's inactive. Radio Congonhas and Radio Portal da Amazonia are also listed, but heard nothing like that in the ID. Radio Amarela is supposedly only a construction permit as of this date....

So.....Has anyone heard what's active on this freq? I'm hoping it's a re-activated Radio Liberal, but I'm gonna be pragmatic in any case!

Why don't you post this crap in:

a.) a newsgroup where it belongs; or in the alternative,

b.) a newsgroup where someone cares.

Your political rants and commentary are an annoyance.

Thanks.

I don't think there's any need to keep the PSU as far from the radios as possible. The SL-11A is not a switching supply, so it's not likely to generate noise. (I've not used a SL-11A but I do have a RS-20A which is perfectly quiet.)

> Problem is, I tried looking up the current rating capacity of this

Probably. 1.1 amps really isn't much current; it doesn't take a very big wire to carry it safely.

> makes you a coward and a traitor.

Well let's rememebr that it was women who got Clinton elected - TWICE
..... following your logic, I think the reason they voted for him was
not for protection either.

Second, there were and still are terrible things over here other than
box cutters (are you a military arms expert or just an avid popular
science reader?).

Third, plundering the country was initiated by the last clown in
office......where were you to criticise Clinton. All of the money made
back then was by a select group who derived profits from fools
investing in the stock market, or victims of retirement funds
collapsing due to CEO/CFO mismanagement (I bet you had millions, no
thousands in the market then too, no??????)

In summation, I would like to drag your sorry butt over here in the
Middle East and expose you to the culture over here, and witness how
denezins from other countries sell their wares, and even let you try to
chum up to the moderate half of the Islamic Arab world. Perhaps your
verbalizations, wild to rude in scope, best exemplify why the USA
shouls draft every male and female for government service for at least

2 to 3 years.....earning your citizenship under the gun would open your eyes to the world as it is, and not as you'd think it is.

My friend, we are 6% of the world, and they are so lazy to achieve what we have that it is easier to label us a devil, destroy us, and return to their solitary, male-orientated, state-welfare culture than stand up for themselves and fight for what we alrady have. I suggest that the panyhose statement is best applied to your kind - talk alot but deliver little except self-serving at best.

The men and women over here, and guys like me retired who were here before 9-11 know the score. If you have kids, or some sense of responsibility about America and what it has given you, the tune you are piping would be an octave difference, lower I hope. There is an enemy out there, mean and lean, eying you and your liberal nonsense...in society's in the the region, you are the first to be arrested, detained, tortured, or even taken out to the desert for a mass execution along with other risks to the local regime's power base.

Bush and Chaney are not my first choice either...but look at what was offered...weakness, and consummate politicians. the Democrats are so blinded and limp that they would say or do anything to get elected. Perhaps they can find another womanizing pretty-boy, another draft dodger, and another defiler of our security laws and regulations back then in his Moscow days, ... that would send the correct message to the world and the terrorists, no???

The fact that you think the troops should refuse to fight in Iraq and else where typifies the attitude of the fair-weather patriot. What troubles me more is that I spent 26 years of my life fighting abroad while rising through the ranks to officer status while Americans back home are full of eccentric ideas and wild exagerations about their country. In a nutshell the fight was on before Bush took over; the rape by corporate America started during the prior regime; and I am sick and tired of people with a rubber backbone telling our soldiers to rebel because of their personal character flaws.

If you are waiting for someone to invade our borders with an army identifiable, or a solid battlefield to dance on...forget it....either us or them must win this cultural, idealogical war...Israel is just an excuse for a broader question...Islamic or Christian values...there is no middle ground.

Look at Haiti. The US backed dictator Papa Doc Duvalier and his successor son for about THIRTY years. They were monsters. Just a little while ago, they put the ELECTED leader Aristide, at gunpoint, on a plane to France. Go figure.

Al, the only two entries I can find in the latest Danish DX Club Tropical
Band survey are:
A 4775 1 B R Congonhas, Congonhas, MG [? Oct-Feb] 0830-2400v P. Usually with
Evangelical px MAY05
A 4775 0,5 PRU R Tarma, Tarma, Jun?n W 1000-1400 2000-0400, Su 1100-1400
2000-0400 S APR05

But if I have a difficulty IDing a Brazilian station, I usually send an
audio clip to the chaps at:
www.ondascurtas.com
they are very helpful and usually manage to ID my clips without any
dificulty.
Good luck!

> hot, so they can switch over and get back on the air, "In a couple
> seconds"

Yes, some TV stations get damaged. But invariably they violate the
proper designs of a lightning mitigation system. All that it takes
is a single conductor that doesn't go through the ground window.

Years ago I worked on a fairly expensive project, set up on a mesa in
Colorado, with an antenna higher than any object in about a 5 mile
radius. The other users of that site were habitual in plugging
something into the protected side of the ground window and then
putting on a metal rack on the unprotected side of the window.
Because of that habit, they will no doubt lose their equipment in a
direct strike.

...and there's no need.

As for damage to the antenna systems... some times it can't be
avoided. But many times it can. In that case, all it needs to have
is a low impedence path to ground in the case that lightning strikes.
Gas discharge tubes (or spark gaps, but far less controllable) provide
that during a strike. The tube has to be able to survive for the
lifetime of the strike, no longer. If it shorts, well... it did its
job.

Does he really think that a bunch of people standing in front of the
studio singing a petition will make a difference? I know that NYC is
full of weirdos, but a singing protest has to take the cake. Maybe other
liberals could take to singing their protests. Maybe then they could
actually get some media coverage. :)

As a follow up, found some excellent research on some balun testing for just the use I mentioned, really good stuff:
http://www.dxing.info/equipment/impedance_transformer_bryant2.doc

John

"John Smith" <assemblywizard@gmail.com> wrote in message news:LMame.163$0o.10684484@news.sisna.com...
I have a Grundig YB-500 (Yacht Boy 500) shortwave portable. I frequently take it to remote locations with me and have enjoyed the radio for years. It has a short pull up whip antenna, all I have done in the past is to slingshot a long wire into a tree and use a clip lead to attach it to the pull-up whip (no external ant connections on the radio).

I was wondering what the impedance the collapsed whip would present, and what sort or a balun/auto-transformer could be used between a longwire (or other ant), gnd and the pull-up whip to improve reception...

... anyone ever done any experimenting or unique ideas?

Warmest regards,
John C. Smith

I would rather burn in hell for eternity than kiss Jesus's ass for eternity. That's what Christianity boils down to: Jesus saying "kiss my ass and go to heaven and everybody who doesn't kiss my ass will be thrown into the lake of fire". And then the Bible says that Jesus will FORCE everybody to kiss his ass-"every knee shall bow and every tongue confess". I suppose that like every dictator, the Heavenly Dictator thinks that forcing people to kiss his ass equates to approval of his leadership and actions. When the dictator can throw you into a firepit for refusing to kowtow to him, most people would bow their knees and confess their "love" for him, a sad testament to moral cowardice. And then after a few generations the descendants of the kowtowers eagerly join the dictator's minions in throwing the refuseniks into the fire. This is what Christianity (and most other religions) is based on, the concept that God is a Middle Eastern sheik who can order people around like slaves and use the threat of eternal punishment to ensure meek subservience. Your religion is fucking sick. Have you actually READ the Bible? Your god is always killing people, 40,000 here, 70,000 there, just because they're not forthcoming in joyous enough praise of him. What a sick fucker your god is, force people to praise him, and if that praise isn't sufficient it's off to hell they go. And of course it's moral and just because God says it is, and he's God so he's responsible to nobody and he has the final word, so he can slaughter thousands all day long and then call it perfect justice. Take your preaching and shove it up Jesus's ass, then kiss it. I for one hope Satan wins. If God wins, we're all fucked.

Tom - I did open up the KA-1102 and and once I saw the very tiny
surface mount parts I decided to leave it the way it was short of
disconnecting all the signal level LEDs to save battery power. Give me
thru-hole parts any day if I'm going to do modifications! I've stuck to
tabletops for heavy duty experimentation!

Of course mose things are now made in China or SE Asia. There are no
American or EU manufactuers left except in name!!!

734. Wrong scheduled frequency for Australia

Newsgroup: rec.radio.shortwave
Date: 2005-06-06 04:40:42 UTC
From: Telamon <telamon_spamshield@pacbell.net.is.invalid>
Message-ID: <telamon_spamshield-D2C6E1.21404205062005@newssvr13-ext.news.prodigy.com>
Source record: 24272

Australia was on the wrong frequency for awhile today. At 22:00 they were supposed to be on 21,740 but were on 15,515 instead. The mistake was corrected a while later between 22:00 and 23:30 UTC they were on the 21 MHz band like they should have been.

735. Very good daytime reception today on mid SW bands today

Newsgroup: rec.radio.shortwave
Date: 2005-06-06 04:47:06 UTC
From: Telamon <telamon_spamshield@pacbell.net.is.invalid>
Message-ID: <telamon_spamshield-B2D775.21470505062005@newssvr13-ext.news.prodigy.com>
Source record: 24273

I noticed more than the usual amount of signals today on the 11, 13 and
15 MHz bands late morning to middle afternoon today. There were more
signals and the one I checked were much stronger then usual.

The 17 MHz band was normal and the 21 MHz band was weaker.

Right now (4:45 UTC) Australia and New Zealand have bigger that usual
signals on the 15 MHz band.

David wrote in post number 1 at the very top message:

"Intelligence and facts are being fixed around the policy."
"Fixed" means faked, manufactured, conjured, hyped - the product of
whole
cloth fabrication.

Well, at the Council of Foreign Relations meeting in San Francisco this
week,
as presented on CSPAN today, June 5 2005, the head Iraq sanctions
observer was guest speaker, among others.

The specific line about the 'facts' being 'fixed' was agreed to by all
speakers at the podium as having been used by the original author to
mean that the facts were arriving in a steady drumbeat supporting
Bush's policy, not that the facts were
being cooked or distorted in any way.

Another smoking gun that really isn't, except that it's taken that way
by conspiracy freaks and passed around the internet in a rather
sensational display, but completely misunderstanding the text.

That's not the only radio with soldering problems. My couple year old
$4K Ten-Tec started dying on me after a few minutes of operation. It
would be working normally and then light for the signal strength meter
would go out, the meter would go to half scale and the audio would drop
out. That was to many things failing at the same time so I suspected
power supply problems. This radio has a status led for each of the four
power supply voltages and looking through the top grill sure enough I
saw one of them go out when the radio malfunctioned. Turned out to be
the +12V supply. Turned out that most of the solder connections on the
power supply output connector were cracked on the power supply board.

From: Hatfield <utility_infielder@earthlink.net>
Message-ID: <1118037122.507717.50030@f14g2000cwb.googlegroups.com>
Source record: 24284

Witness his administration's willingness to work with HAMAS, instead of against it, to wit:

" CRAWFORD, Texas (Reuters) - The Bush administration is showing signs of easing its hard-line approach toward Hamas, in response to the militant group's rising political clout in the Palestinian territories and appeals for flexibility from European allies, officials and diplomats said...
The White House acceded to Hamas running candidates in Palestinian elections, even though the group has refused to disarm... Increased flexibility might put the Bush administration at odds with Israeli Prime Minister Ariel Sharon... "

Bush is not some very narrow minded extremist, nor one sided on the Middle East situation, but instead a thoughtful statesman. So are both Clintons, in my opinion, and Ford, and Bush1...

None such good things can be said about over the top radical bomb throwers like Howard Dean, most folks at moveon.org, and such crazys :/

Actually, 'singing' your protest has long been a popular form of protest.

1960's:

Peter, Paul and Mary- Blowin' in the Wind
Barry McGuire- Eve of Destruction
Janis Ian- Society's Child
Beatles- All You Need Is Love
Rascals- People Got To Be Free
Dion- Abraham, Martin and John
Eric Burden and War- Sky Pilot

1970's:

Edwin Starr- War
Freda Payne- Bring the Boys Home
Temptations- Ball of Confusion
Blues Image- Ride Captain Ride
Raiders- Indian Reservation
Marvin Gaye- What's Going On
Marvin Gaye- Mercy Mercy Me
John Lennon- Imagine
Five Man Electrical Band- Signs
Cat Stevens- Peace Train

Just a sample.

No, everything went through one ground, but the strike wasn't on the
tower, it hit the poured concrete building in multiple locations. It
was a single level, flat roof with a wall around the outside edge. The
concrete finish cap was missing in a lot of places after the storm.

> Eric F. Richards

When the strike hits the building rather than the tower, its going to
do damage. There were chunks of concrete blown out of the building,
exposing rebar and 1" threaded rod that held the concrete roof to the
pillars in the parking lot. The ground conductors for the building
vaporized, but it was replaced with newer and heavier grounding,
including a 4" metal conduit run from the equipment racks to the
tower. I moved the microwave racks from the center of the building into
a tiny closet as close to the tower as I could, rebuilt all of the
electronics, and added another set of ground rods where the 4" conduit
entered the building. After that, there has been no damage, even though
the tower has had some strikes. It will fail again, some day because
the weather here in Central Florida corrodes everything over time.

I know he's a troll, but I don't want others to be fooled by his cut
and paste BS. I think he does a search for the word lightning and
attacks. Maybe I should change the "Organization" line of my header so
he'll see every post I make, in every newsgroup. If enough people did
that he would have to work quite hard to troll.

It cost our insurance company some money, but I'll bet that Sprint spent $10,000 to fix everything in that Lake County strike that vaporized the underground phone line. They had to bury a new 25 pair line to all the pedestals on my road, and a new six pair a quarter mile to the house because everyone on the old cable had intermittent noise on their phones. They had to replace the guts in several pedestals because their lightning protectors failed and left nice burn marks.

BTW, are you getting ready for the hurricane season? I'd like to buy a 3 KW or larger generator while we have the sales tax holiday, but I just don't have the extra cash right now. I finally got a truck and fixed it so I don't have to depend on someone else to take me places. I've already spent $200 on it in less than two weeks and I still need to fix the air conditioner.

No, it sounds like a very sensible idea to all parties (I'm a member
of the right-wing UK Conservative party) when you consider that we
have:

* 50 million people with
* 30 million vehicles on an island only
* 700 miles long.

What's missing from the description is "congestion". The proposed
system is based on congestion, multiplied by distance and time
travelled.

Driving in crowded London (where there are busses every 3 minutes
anyway) will cost more.

Driving in my home county of Gloucestershire (a rural area, my village
has one bus per week - on Monday) will cost a lot less.

Currently of the 5 dollars a gallon of gas I pay, more than 3 dollars
of this is tax. I pay this tax even though I drive down empty rural
roads.

They want to change this so that I pay only 2 dollars a gallon for
gas, PLUS 2p per mile to drive down empty rural roads.

Sounds like a sensible right-wing tax-cutting winner to me!

>Forget about gay and lesbians and start making a herd load of babies and you
>wouldn't have an emigrant problem in Europa.

I quite agree. Wish me well with my marriage on Saturday! We're hoping
to have kids next year.

Us Europeans aren't all liberal urban homosexuals. Heck, dude, I live
next to a farm and have a rifle range in my back yard.

That's why the new road charge proposals are good; it stops punishing
good old-fashioned country folk like me and puts the burden of gas tax
back on the urban people where it belongs.

I have owned a few Grundig radios, over the years the quality has declined--they still sell they at the prices they do because they are relying on their past reputation--a reputation which is no longer deserved for the cheap plastic junk they are dumping on us at inflated prices...

Warmest regards,
John

Perhaps your wording is a little stronger than most, but your observations seem to be typical for this model.

Hi FDR,

I think after reading all the suggestions here, I might exchange these Fast 1.6A's for either 1.8's or 2A if that's the case. Most likely 1.8A. I'l see.

Thanks
Lucky

By the way, do these fuse holders have a polarity where they need to be soldered in line properly?
No of course not since you can put the fuse in the holder in either way or direction. Just figured I ask. I mean if you're not 100% sure but are 99 9/10% sure, why not close the gap on that 1/10th and ask eh?

Not that it matters much, but I generally put the longer side of the fuse holder on the side that goes to the power supply because you're less likely to have the contact for the fuse touch something it shouldn't when it's unhooked for changing.

I do, I do.
I lived on the English South coast right in the path of the departing C-47's and their gliders, and even though I was quite young, I remember to this day that the sky was black with aeroplanes from horizon to horizon and the thunderous roar they made lives with me to this day.

Canadian troops were bivouacked near our house and they suddenly disappeared one night. I often wondered how many of those brave men survived the war and returned to their homes in far off Canada.

Well Michael. I've never heard of anyone's radio surviving a direct hit so
it was news to me. I've seen guys put ground radial out like a spiderwebs
all around their towers but I'm not convinced anything can absorb the entire
brunt of a direct strike without some energy traveling up the feed line.
Every ham or electronics tech I've ever spoke too has said just unhook your
equipment in a storm and save yourself some grief.

Don't have personal experience with that model, but isn't it a rebadged
Degen or Tecsun model?
If so, sensitivity doesn't seem to be a problem with their radios.

A couple of questions:
What radio are you comparing it to.
Which bands are you listening to and when.

776. Nothern California - Seeking Antenna / Microwave Engineer

Newsgroup: rec.radio.shortwave
Date: 2005-06-06 15:38:15 UTC
From: Ed Kowal <marc.e.kowalski@gmail.com>
Message-ID: <1118072295.420039.98340@z14g2000cwz.googlegroups.com>
Source record: 24414
Cross-posted to: biz.jobs.offered,sci.physics.electromag,rec.radio.shortwave

Menlo Park-based antenna design, test, and fabrication company has multiple openings for Antenna and Microwave Engineers. Duties include:
- Design and development of broadband and/or polarization diverse phased-arrays;
- Generation of test plans, supervision of prototype and production tests, and processing of test data;
- Advisement on business development; and
- Leadership in internally-funded research and development efforts.

Candidate should have solid grounding in electromagnetic theory, modeling, and measurement. Familiarity with HP network analyzers and common commercial EM modeling software (HFSS, NEC) strongly desired. Prefer 5-10 years of experience in aerospace and/or defense industry, but all qualified candidates will be considered. Candidate must be able to obtain and hold a clearance at least at the level of DoD Secret (DoE L).

Company is over 30 years old with significantly longer than average employee tenure in the valley. Commuter-friendly work schedule, 401(k) match, employee stock purchase plan, and other great benefits are available.

Replies will be taken in strict confidence at marc.e.kowalski@gmail.com.

DISCLAIMER
Nothing in this advertisement shall be construed as an offer of employment. Any terms of employment, either express or implied, resulting from contact initiated by this will be based entirely on oral and written dialogue susbsequent to this posting.

He showed up in a bass player's newsgroup a couple of months ago with endless, rambling posts about power conditioning and voltage-spike protection -- just tons of unintelligible gibberish, cut and pasted without any sense or conclusion. He avoided every question posed to him with more loads of gibberish. Weird guy, but some people are taken in by his quasi-knowledgeable tone.

Hiya Mark

Yes good thinking. I can see something like that happening after moving, pulling or repositioning the cables. In fact,I'm going to put a tiny piece of tape around the holder to seal it.

BTW, should the fuse be as close to the radio or PSU? I was going to put it close to the PSU since that's where all the dangerous current can originate from.

1] But now I'm of the understanding I'm really protecting the PSU and it's environment with this added fuse more then protecting the radio itself, correct?

2] So if it's the radio that may cause the current failure drain, then the fuse should be closer to the radio then the PSU correct?

I decided to do all this to protect the radio from the PSU since I'm not 100% sure the PSU doesn't have any defects from perhaps lets say a fall. The PSU could work perfectly but have a solder joint ready to break.

But I would have done this **anyway. This is my first experience with such a powerfull power supply that can totally fry
any electrical component conected to it. It kinda intimidates me a little compared to all the small low powered wall worts I'm used to:)

I have always put a failsafe in place in most aspects of my life. If I can fit a level of added security in case the major one fails I'll do it.

Remember it's always better to be SAFE then SORRY.

Always happy to hear from you
Lucky

Well, if you got a big voltage spike, the fuse might blow before the radio, but
odds are the radio will blow to protect the fuse.

> 2] So if it's the radio that may cause the current failure drain, then the
> fuse should be closer to the radio then the PSU correct?
>

No. If for example the wires between the PS and the radio got shorted between the PS and the fuse, the fuse won't blow, and the wires will get nice and hot.

If you want to protect the radio, your best bet is probably to add some surge protection - a 15v MOV hooked up on the radio side of the fuse might help blow the fuse before the radio gets fried.

780. Re: Lightning Protection - What Do YOU Use?

Michael A. Terrell wrote (in part)

Really? A friend of mine makes over half his income from repairing
lightning damaged radio stations here in Florida. While I was the
engineer at WACX TV lightning hit their studio building in Leesburg
Florida. It took ot the entire telephone system, the main computer,
all
the terminals, all the LNAs on the C-band dish, most of the receivers
....

I have done lots of contract work in area TV and radio (AM and FM)
stations. I have been inside working during seeral T-storms. Other
then the joy of having florescent lamps that are not turned on act like

strobes, and having the power dip for a moment, MOST of the time
there was no damge, to anything other then my nerves.

I know that commercial broadcaster can and do experience damage,
but most ot the time strikes don't damage anything. One local station
gets struck "every" time it clouds up and they go years without damage.

Of course the ham repeater there doesn't fair as well.
Funny the commercial 2 way radio repeaters have about as few
problems as the broadcaster. Of course the commercial boys
use Polyphaser protectors and the,the last time I checked,
had another make of "lightning/EMP" protection.

Same make antennas, hardline and grounding system, just different
protection.

That was proof enough for me.

If I gave the impression that I thought that Polyphaser clamps and a
good ground system will prevent damage, sorry, but it will certainly
reduce
the damage and increase the years of trouble free operation.

Terry

I lived in South Ruislip England from 1954 - 1957. My father was in the
Air Force. There was still quite a bit of rubble and damage in London.
It was only 9 years after the war. I still am in contact with some of
the friends I made back then. The resolve of the British people and
Winston Churchill made a great impression on me as a young man and I
will never forget.

OK Mark,

This MOV [metal oxide varistor}, is it a component I can buy from Radio Shack and solder in line, or is it an actual physical strip that you plug the PSU into like a regualr surge protector?

So pick up a 15v MOV and solder it in line before the fuse closer to the radio and the fuse holder itself closest to the PSU? Right? Wow this is great help and advise.

Thanks a lot
Lucky

I doubt you'll find a 15v MOV at radio shack unless it's in a special order catalog.

It would get hooked in after the fuse, and before the radio. The hope is the current draw from the MOV clamping down on the voltage spike will help blow the fuse before your radio gets fried.

I don't think this will protect your radio from a serious spike, but you're not likely to spend more than a few bucks for a mov, so what the heck.

Telamon asked:

<<Where do you think the future of telecom is going? Is it going to be mostly fiber-optic or do you think RF for the last mile to the home or business?

Do you think Ethernet is winning over ATM? >>

Anyone who claims to know the answer to your first question will either become a millionaire quickly or will be surprised by the changes. There's a war going on over the last mile, as you know. Right now cable/DSL are predominant, at least in the U.S., but wireless technologies will eventually push through and will be strong competitors in this market. Regarding the last question, there is a strong push for VoIP (voice over Internet Protocol). Most of wireless traffic is still voice and All-IP system architectures (as opposed to dual circuit switched/packet switched) are the way of the future, but there are important Quality of Service (QoS) issues to be solved regarding voice over IP (esp. end-to-end delay). We should know more definitively in the near future.

Mark,

Ratso Shackups only shows 1 MOV. Here is the product and 2nd link is the
specs.

http://www.radioshack.com/product.asp?catalog%5Fname=CTLG&product%5Fid=276-568

specs:

Les, that's an amazing coincidence - my father, was an ex RAF man who served in North Africa and Italy, lived in South Ruislip and I spent some time there in 1955 after returning from Africa for a year.
I remember going to visit St. Paul's and was amazed at the wasteland from the bombing that was still not rebuilt.
Churchill's speeches are one of my favourite CD's which I listen to frequently.

John,

We lived at 185 Victoria Road. My father was a teletype and crypto technician. I spent many days on weekends at Bletchley Park, Chicksands and Menwith Hill with him while he was keeping the equipment running. I even met Churchill in 1956, while he was visiting the communications center at South Ruislip, he was on the base and my father was in a full dress uniform for the ceremony, he stopped and talked with us. A memorable experience!

We lived about 2 blocks from a great fish and chips place. To this day, I prefer malt vinegar on my fish and chips! A local pub serves them and I'm a regular.

Les

788. Re: Lightning Protection - What Do YOU Use?

Newsgroup: rec.radio.shortwave

Michael Terrell cries, "Woe is me. Nothing can prevent
lightning damage." Meanwhile professionals learn from human
mistakes and routinely prevent lightning damage:
Richard Harrison posts on 7 May 2001 in the newsgroup
rec.radio.amateur.antenna entitled "Grounding Question -
Connecting to Power Ground":
> Early in 1949 I started work in broadcasting. I worked in three
> stations in that year, KPRC, KXYZ, and KTHT. The first two were
> built in the 1930`s and KTHT was about one year old when I went
> to work there in 1949.

> None of these stations ever suffered lightning damage when
> taking many direct hits during every year. In fact they only
> dropped from the air for an instant, to extinguish any
> follow-through arcing when hit, and were returned to the air
> automatically following an arc kill.

> In 1949 there were already thousands of AM broadcast stations.
> Some were improperly protected against lightninmg, but the vast
> majority, like the stations I worked at, were almost perfectly
> protected against lightning damage, and so it was almost
> unheard of.

> Ben Franklin figured how to protect structures against lightning
> over 200 years ago. The rest is just elaboration.

Or http://www.harvardrepeater.org/news/lightning.html
> Well I assert, from personal and broadcast experience spanning
> 30 years, that you can design a system that will handle *direct
> lightning strikes* on a routine basis. It takes some planning
> and careful layout, but it's not hard, nor is it overly
> expensive. At WXIA-TV, my other job, we take direct lightning
> strikes nearly every time there's a thunderstorm. Our downtime
> from such strikes is almost non-existant. The last time we
> went down from a strike, it was due to a strike on the power
> company's lines knocking *them* out, ...
> Since my disasterous strike, I've been campaigning vigorously
> to educate amateurs that you *can* avoid damage from direct
> strikes. The belief that there's no protection from direct
> strike damage is *myth*. ...
> The keys to effective lightning protection are surprisingly
> simple, and surprisingly less than obvious. Of course you
> *must* have a single point ground system that eliminates all
> ground loops. And you must present a low *impedance* path for
> the energy to go. That's most generally a low *inductance*

> path rather than just a low ohm DC path.

And even from Sun Microsystems "Planning guide for Sun
Server room":
http://www.sun.com/servers/white-papers/dc-planning-guide.pdf
> Lightning surges cannot be stopped, but they can be diverted.
> The plans for the data center should be thoroughly reviewed
> to identify any paths for surge entry into the data center.
> Surge arrestors can be designed into the system to help
> mitigate the potential for lightning damage within the data
> center. These should divert the power of the surge by
> providing a path to ground for the surge energy.

Did Michael Terrell cite technical facts? Of course not.
Others here have posted how damage is routinely avoided.
Thank you Michael for your insults. When do you provide a
single reason why this well proven science does not work? Its
been a few years. When do you provide one good technical
reason?

Others who learned from lightning damage eliminate a failure
rather than just replace electronics. Michael endorses
failure as if it was situation normal. Even children are
taught not to be quitters. Damage from direct lightning
strikes is routinely avoided.

So which week was Michael's town without phone service while
the telco switching computer was replaced? Oh? They don't
disconnect that computer from overhead wires everywhere in
town during thunderstorms? How can that be when Michael says
protection is not effective?

"Michael A. Terrell" wrote:
> Do you write this drivel every time, or do you copy and past it?

That MOV is intended for use with 120vac. It won't do anything unless it sees at least 184 volts.

With that MOV on the 13.8v line, if the fuse blows because of too much voltage, odds are there will be too much smoke pouring out of your radio to find the fuse holder so you can change it.

You want one rated to start triggering just a little beyond what your 13.8v power supply should put out.

I think one rated for 15v is probably optimum, and I don't think I'd bother with anything designed to trigger above 17v.

What some of you people don't see is that during most thunder storms here in central Florida there can be an average lightning strikes in the thousands for each storm. Not your typical anywhere else in the US. That being said, there is no protection from a direct hit. Never was and never will be(affordable anyway). You can protect from near hits though through proper grounding. Heck, when I lived in northern Michigan I would get a static charge from a snow storm at times. Protect as well as can be done affordable and then rely on you homeowners policy to pick up the pieces. After all, thats why you bought insurance isn't it?

Yeah Mike, we're getting some things together again but I'm not going for a generator yet, just canned goods and LP tanks and batteries etc. I guess we should board up in June and take the boards off in December. Makes for a dark summer ;-p

Most lightning strikes remain in the sky - are not CG type.
It is the CG (cloud to ground) type lightning that causes
electronics damage. Typically, the resulting destructive
transient occurs about once every eight years. In Central
Florida, this number is higher. I have seen estimates of once
every two years.

But this is a regional average. Other conditions such as
underlying geology change this number for neighborhoods and
even between homes. To better determine a threat risk, one
should learn the neighborhood history.

Regionally, FL has some of the higher number of CG
lightning. But WV has some of the highest numbers 'per
thunderstorm'. Another region of concern is a large area
between AZ and NM. The mid west may have spectacular
thunderstorms, but the frequency of CG lightning in this
region is low.

We have vehicle license tax, fuel tax and local, state and federal taxes. A
portion of each is allocated to new road construction and maintenance. Not
to mention highway tolls extorted on certain highways as mentioned above.

Enough! Now get to it and procreate so we can have more productive, tax
paying citizens. Congratulations!

Agreed. During the Anti-soviet era OBL was a funds raiser, a recruiter and later used his experience in the family construction business to build the cave fortresses we hear about. Some of that was front-line work and he earned his chops and impressed the fighters. Essentially all western aid to the mujahideen was done through the PAK secret service (at PAK's insistance) and most Afghanis and mujahideen to this day think they kicked the Russians out by themselves with aid only from Arab and Muslim assistance.

When SH invaded Kuwait OBL went to the the Saudi Royals and asked to be allowed (and funded) to oust SH (an unbeliever) from Kuwait (believers) without the help of the Americans who he disliked but had not attacked, yet. Saudis allowd US into the the Muslim holy land and OBL went on the warpath against Americans and declared the Saudi royal family to be unbelievers and started to attack them, and us.

BTW: Under Bush we've pulled out of SA. The terrorist think they'v won that battle.

How many blue water ships does Russia have these days? I can't
believe that added up, all their ships would equal some large joint
NATO excercise. Besides, size (number of ships) isn't everything.

I think an India-China axis in reaction to a Muslinist PAK with a
nuke bomb is the scariest scenario.

We lived for 50 years with 40,000 Russian nukes pointed at us. If we
stay smart we can work with them.

I wonder if anyone here has every done this, and if so, how. I have seen references to vintage radios having been restored and the markings and lettering silkscreened on a refinished faceplate. It seems to me that refinishing the faceplate is the easy part, but who does this sort of silkscreening? I've called a couple of places and all they do is clothing like T-shirts and hats. Any ideas? Thanks.

Jeff

Thanks for the info, John! Unfortunately, I had a moment of brain
freeze and didn't make audio clips, so I guess I'm S.O.L. until maybe
I heard them again. I have all kinds of notes, but no recordings.

Your info has definitely been stored for future reference! Thanks
again!

That's a non-answer if I ever heard one. Leaving the illegals out, -why- are blacks more likely to end up in prison? Because they're black?

Charmed, and likewise I'm sure!

If your Chinese buddies had an ounce of initiative they would have
risen up and overthrown their oppressive government a long time ago.
Yup, hundreds of thousands would probably die, but the result would be
that they would have freedom. If you're not willing to die for
freedom, you don't deserve it.

Same problem when the Cubans and the Haitians came crawling up on our
shores recently asking us to overthrow their regimes. Do it
themselves with the equipment we offered? Heavens no! They might get
killed! Let Uncle Sam do it. No more, folks! The Bay of Pigs fiasco
was enough.

Again, post your political crap elsewhere. Try the Chinese govt's
website, or do your testicles shrivel at the thought?

Yes and no. The problem with the 2001D is there are a number of sub
models for specific markets,and they have various restrictions on them
that are NOT on the 2010.
Some have coverage holes (no air band), Italian version has some holes
in the HF bands, the Saudi version has no SSB or Synch detector
(disabled) or air band... My recollection from the service manual is
there are at least 4 variants of the 2001D that have feature/coverage
holes mandated by local regulations.

II Chronicles 19:2, ...☐Should you help the wicked and love those who hate the Lord and ☐☐so bring wrath on yourself from the Lord?

New American Standard Bible : 1995 update. 1995 (2 Ch 19:2). LaHabra, CA: The Lockman Foundation.

This is but one reference to refute your statement. To help those who hate the Lord is to bring wrath upon that Christian FROM THE LORD! Looks like more of the doctrine of Balaam. When Christ's enemies can't defeat the Christians themselves they, knowing the Word of God better than most Christians, teach them to do the things that will bring God's wrath down upon them. Thus they have indirectly accomplished what they could not accomplish directly! :-)

This has been pulled hundreds if not thousands of times! We sheep seem to never learn. The sly old foxes / snakes / tares are shrewd folks!

WHO HATES THE LORD? Read First John chapter two. Even now there are many antichrists! Rev. 2:9 & 3:9 tells us there are those who SAY they are Jews but are of the synagogue of Satan!

Solder problems seem to be the case in all the cheezy "yellow board", single-sided consumer grade pc boards. I see it all the time in cheap power supplies. If the boards have plated thru holes the problem is almost non-existent.

Do politicians EVER cut taxes? I don't recall it.

In my initial post on this topic I stated that the sales tax and toll roads were, in my opinion, the two fairest of all taxes.

I DID NOT mean to imply that I approve of the satellite tracking which Britain plans to do! Also, our politicians seem to find a way to go to extremes on many issues, such as some wanting to put meters on private wells here in the U.S.

The government which intrudes the least into our lives is the best government.

We can expect the intrusions to continue and to get much more pronounced. I'd say, YES, we are going to have CAFTA (Central American Free Trade Agreement) to go into effect, even though the Democrats seem to be against it at this point. Then will probably come SAFTA (South American Free Trade Agreement) and it will probably be followed by The Free Trade Agreement of the Americas - to include NAFTA, CAFTA & SAFTA areas. Of course, they may CALL them anything, but the basics will be the very same.

BIG changes are on the way! Get ready. PREPARE! There are no emergencies to one who is prepared! :-)

"Are You Washed In The Blood?" ... "the soul cleansing blood of the Lamb?" - a nice song!

Christians will be persecuted more and more as time goes by, for ONE REASON. They won't fit in with the "New World Order" because they won't "bow" to the NWO. There is ONE WAY to the Father and that is ONLY through the Son of God! He who has the Son has life. He who does not have the Son does NOT have life.

EVERY other religion is at odds with Christianity on this point -- even the Jews who will eventually accept Christ but currently claim access to the Father without Him! Jesus himself refutes this in John 14:6, "Jesus saith unto him, I am the way, the truth, and the life: no man cometh unto the Father, but by me." Notice He didn't say we could come through Buddha, Allah, Hair Chrisner (? sp), or any other means!

The Scriptures tell us concerning the antichrist that he CAUSETH all to take the mark in their right hand or the forehead. Look for them fairly soon to start telling us we need to use biometrics to open bank accounts, withdraw funds, conduct transactions, etc. It may not INITIALLY be in the forehead or right hand, but that's where it will end up!

Think about it! Read The Book! Have a good day!

> Hi Jeff,

I have done the artwork using Design CAD for a number of my boatanchors. I start by doing a hi res scan of the front panel and then importing it to my CAD program. Using an overlay, I create the new artwork and select the font used on the original panel.
If the panel is in color (as in a Johnson Navigator I am now doing) individual images are produced for each color.
Once the artwork is complete, I send the images to a print shop and they make positive side transparencies. These can be used by the silk screen shop to burn screens for each color. Although you can purchase do it yourself silk screening kits- it takes skill and it would be a nightmare to strip/prime/ lay down color base coat and then to have one of the screens get smudges as each color is placed on the panel. I let the pros do the screening. Search your area for metal finsihers/ painters- they often also do screening.

73,

Dale W4OP

It's outa here. Thank the Internet... especially broadband. The BBC no longer broadcasts on shortwave to North America because they feel they have more listeners on the Internet. They are also available on both of the USA's satellite radio services.

And coming soon-- radio on your cell phone. That will make international broadcasters available everywhere... including metropolitan areas where interference sources and the need for an outside aerial made shortwave listening impossible.

Hi Mike:

- Yes, Shortwave has a future..
for communication over long distances - at low cost
or
for military applications..
or
for commercial SW that doesn't neatly fit into the larger commercial
loop... Including Pirates..

As for the cost of fixed stations.. I think WBCQ is on the cutting
edge, building a wind farm to power it's transmitters..

We'd better all hope that shortwave continues and has a future for the sake of getting REAL news. So-called "streaming audio" is a joke, there is nothing "streaming" about it except the malarky coming from the mouths of its proponents.

Satellite as well as Internet information and, yes, news, is too easy to censor or block entirely.

God help us if we have to rely on the pathetic US broadcasters (all 3 of them which own most media now) or satellite/Internet "technology" .In the so-called "Cold War" days I remember hearing how the communists would go up and down the streets with radios tuned to IF frequencies and detect what people were listening to. If you were tuned to RFE or some banned station, you were in trouble. Good grief...does anyone believe that Internet/digital mediums are not being monitored or soon will be?

Smokey

an interesting quote from that page:
****
Bulk power transmission

A transmission grid is made up of power stations, transmission circuits, and
substations. Energy is usually transmitted on the grid with 3-phase
alternating current (AC). The voltage level on the bulk power transmission
system is typically between 115 kV and 765 kV.

Believe me, the VoA is still here...although it's not cheap for us in the CNMI! The CUC (Commonwealth Utilities Corp.) gouges the US Government on our electricity because it can't get it's own government (CNMI) to pay its power bills. Every time they go to shut off a CNMI govt office, the CNMI govt gets it's buddies in the CNMI judiciary to issue an injunction prohibiting it! Front Page news has it that the CNMI govt will be completely broke by election day this year...

But I digress. The VoA is still here...we just concentrate on new targets and have expended services to those new targets at the expense of old services like English and most european languages. However, the general feeling at the IBB water cooler is that we'll all be pahsed out within 10-15 years. :-(

Al in CNMI

This is a good hobby and news group.

We have had some solar flare activity today and the geomagnetic field is unsettled. Things were good early this morning before I went to work. Conditions are not as good now at 3:30 UTC but I have a good signal on both Australia and New Zealand on the 15 MHz band. Not as good as last night though.

Good answer. I used to think it was just a battle between ATM and
ethernet over wire, then fiber to the home started looking more
promising and now an RF link could end up dominating.

I think BPL broadband over power lines is a real loser but some people
are pursuing that for the "last Mile" or metro area coverage.

Here is a page to keep track of that:
<http://www.plexeon.com/>

Yeah, quality of service is likely going to go down in the process. That
going to happen if voice traffic uses computer technology like ethernet
instead of the telecom framing technology with all its redundancy, error
correction and intelligent switching not to mention dedicated circuits
or at least time slots in the frames until a call is ended.

Makes me wonder how those voice over IP companies like Lingo or Vonage
are doing these days?

I'm a lot more concerned about Florida lately than California. We've long known that they're mostly cracked over there..

But Florida has shown in two consecutive elections that they don't know how to vote, most of the crazies in the news recently (child murderers) have been in or come from Florida, and a lot of other interesting topics in the news lately have concerned that state.. (including their opting to co-opt some of the FCC's authority vis-a-vis regulation of radio stations, allowing the state to make felony criminal cases of pirate radio operations).

Is there something in the (swamp) water down there or something??

> problem is almost non-existent.

It's a single sided board. You think the hole plating is going to help
relieve mechanical or heat stress? I think you mean an actual rivet
right?

A hole in a circuit board can have three types of through construction
in increasing order of duty:

1. Plated through.

2. A cylinder of copper inserted and then plated to the top and or
bottom pads.

3. A rivet of copper. The cylinder of copper is inserted in the board
longer than the board thickness and crimped to the board pads.

My descriptions are a little clumsy as I don't know the exact board
fabrication terminology.

I expect you mean #3.

These power supply manufacturing companies have a lot of tough
competition and try to figure a way to squeeze every penny out of the
cost of a supply.

Reading from a script reminds me of encounters in various fast food places
that go something like this:-

Customer: I'd like a burger and fries please

Staff person: Would you like fries with that?

The moral is that you don't have to be ignorant of the language to be
reading from a script

We have reached geomagnetic storm level now. Australia was getting noisy
on the 15 MHz band. They started on 13,630 at 7:00 UTC and are much
stronger on that frequency.

864. New HF3 and New Power Supply Work Great!

Newsgroup: rec.radio.shortwave
Date: 2005-06-07 12:22:02 UTC
From: Lucky <lucky@TheBotStopsHere.com>
Message-ID: <11ab4bd9j985182@corp.supernews.com>
Source record: 24352

Hi Guys,

Ok, I hooked up my new Astron PSU to my new Nasa Target HF3 receiver last night. Works like a charm! It's like this PSU is made for this radio. The radio came with no crummy wall wort PSU. Instead, it came with a DC PSU cable that has a fuse holder and 1amp fuse on it already. Just needed to be screwed down.

The {AKD} Nasa Target HF3 is called the Nav-Fax 100 here and the weather fax capable model is called the Nav-Fax 200. Instead of paying the $288 from the cheapest U.K. shop I could find, I found it right here in Florida for $150. Funny how I searched all over the U.K. for it while it was right here in my own state of Florida! Lucky or what??? :) :)

No one knew it was renamed once again!
In fact, it says "Sitex" Communications Receiver on it. Nifty little radio and fun to play with. Nice sounding also. I'm still fooling around with antennas and getting to know the personality of the receiver.

I'll back to you on it's performance and other things worth noting. So far it all worked out fine.

Lucky

I did listen this morning around 0915 and there was a station there which may have been Brazilian, however the static crashes were so great it was hard to tell. After 0930 the station was totally gone which seemed pretty odd, but about that time sunrise is overtaking Brazil.

I tuned back in to 4775 about 0955 and found a station there in Spanish but I didn't stick around due to the static (I want to protect my ears!). The 0955 time, and the absence of anything there after 0930 would lead me to believe that the station you heard was possibly Radio Tarma out of Peru which seems to sign on around 0950 or so:

http://www.sover.net/~hackmohr/sw.htm

I'll try to check it out again one of these mornings when I get up early and the static isn't so bad.

Yeah, that was an audio filter I had once. I remember having to modify it somehow due to a 'thunk' or something when turning it on and off. I remember installing a mini-switch somehow
or another to bypass that problem.

Have them Get one.

Shirt pocket size, double reduction, 1,000 memories..

(Specs / Comments below)

- - AM/FM/SW Multiband Receiver - -
* FM: 70.0-108.0MHz (Includes Campus radio in China), tuning steps 50KHz/100KHz
* MW: 522 - 1620KHz, tuning steps 1KHz/9KHz
* SW: 5.800 - 26.100MHz steps of 1KHz/5KHz.
* Double conversion receiver with high sensitivity and high selectivity.
* Five tuning methods: Rocker buttons, Manual, Auto, Memory recall, direct frequency input, and ATS
* Memory: 1000 stations (non volatile)
* Two volume control methods: Digital buttons and analog.
* 32 level volume control, shown on screen.
* Digital buttons with 3 modes: Fast and slow tuning steps, and volume tuning.
* Intelligent battery auto-charge, with display of charging process.
* Intelligent manual battery charge, with time remaining to full charge display.
* Display and Keypad backlight. Two backlight mode settings.
* Ten point signal metre.
* FM Mono/Stereo with Bass selection.
* Three alarm timers with 3 frequencies and 3 volume settings.
* Sleep timer adjustable from 1 -99 minutes.
* Time and temperature display, accurate to .5 of a degree. (That's what it says! And as it's in China, that would be Celsius degree).
* On/Off electronic lock.
* Metre band display and selection.
* Error display for incorrect keypad operation.
* Battery charge display, auto shut-off when battery runs out.
* BTL power amplifier CMOS chip with excellent sound.
* Signal can be increased with an external antenna.
* Takes two AA batteries.
* Comes with: high quality earphone, external antenna wire, 220v AC adapter, two AA size rechargeable NiMH batteries and soft flannelette slipcover.
* Dimensions:118x75x23.5mm (4.64" x 2.95" x .925" inches)

Conner comments that the most exciting thing about the DE1105 is it's size as it would make an excellent pocket radio. Agreed! He also mentions that he saw on a SW Chinese BBS that will be listed for mail

order in China for around 330 RMB (Yuan) (US$40 +/-)

Poor ole Ben got SOME things right. Others were as wrong as you
are. Early lightning rods caused damage because they didn't understand
how they really worked, or how to properly install them. Have you ever
seen an old building burn down after lightning hit the old "Franklin
Style" lightning rods? Have you seen the way the sections were
connected together with no consideration of minimizing and maintaining a
very low resistance at each connection? The heavy twisted braid used
where the rod across the roof tuned sharply to go down the side of the
building? Yes sir! Ole Ben sure know how to attract lightning and that
was all. The rest of the system was a hack.

A TV tower is fully grounded, and generally heavier than an AM radio tower which is insulated from ground and depends on a pair of large balls to make the lightning arc to ground. I used to have what was left of a set that was hit too many times and shattered.

I have cited a lot of things in the past, and you've always ignored them. You've been spreading the party line of lies for years, ignoring every statement and reference.

Here you are parroting other people's data. You did not do the research, or the actual work. I'm surprised you didn't toss in "The Empire State building" as usual. You refuse to accept that grounding systems deteriorate with age, or can be damaged. WLBE in Lake County Florida lost most of their antenna grounding system when a mall was built next door. The workers crossed the property line with a bulldozer and ripped out half of the buried 4" copper strapping. The antennas sit on two platforms in a marsh and can be hit repeatedly during a single storm. In fact, it doesn't even have to storm to see and hear the bolt

strike one, or both towers. Over time something fails. I asked the engineer to go on line and tell you himself but Frank simply laughed and said that you were too damn stupid to know what he was talking about. I think he's right. You've never worked here in Florida, or seen the damage caused by repeated strikes on a single structure in a short time frame. Pieces of steel warped from the high current flow, or other equipment damaged by induced current from the EMP. You are a troll. On the atomic chart you would be Hydrogen. You are stupid, pig headed, and a pimple on the ass of Usenet. You only care about pushing your harebrained agenda. You refuse to listen to those with experience.

Yes there are things that can be done to reduce lightning damage.
Yes, systems fail. Nothing man-made is perfect, nor will it ever be. As long as you keep spreading your lies and half truths, people will call you on it. You are not only stupid, you're dangerous.

> Others who learned from lightning damage eliminate a failure
> rather than just replace electronics. Michael endorses
> failure as if it was situation normal. Even children are
> taught not to be quitters. Damage from direct lightning
> strikes is routinely avoided.

I have tried several times in the past to explain induced secondary damage, but it bounces right off your thick skull. It doesn't fit your agenda so you ignore it.

> So which week was Michael's town without phone service while
> the telco switching computer was replaced? Oh? They don't
> disconnect that computer from overhead wires everywhere in
> town during thunderstorms? How can that be when Michael says
> protection is not effective?

Once again, you are telling a big ole pack of lies. I stated that a pair in a buried line from my house to the equipment pedestal a mile away was vaporized, that the cards on that line were fried, and that the pair from the equipment pedestal to the CO was damaged so bad they had to abandon it, and replace the interface card at the CO. You are as dense as the operator at Sprint who had to yell over the static on the damaged pair to ask "Are you sure there is something wrong with your telephone service?". It is you that spreads the lie that telephone equipment is never damaged by lightning.

I never said the whole town was without phone service. On the other hand, one whole exchange (10,000 phone numbers) was out of service for about 24 hours back in the '80s after a storm. The contractor didn't assemble the buss bars properly, a pinhole leak dripped into the buss duct and it exploded. The idiots had assembled the buss bars with zinc plated bolts and the damage was so bad they had to replace most of the buss bars, and replace the zinc plated steel bolts with the proper brass bolts.

That's one of the nicer pre-digital audio filters that I've had the opportunity to use. The new owner should get a lot of use out of it. BTW, there was a very positive review in one of the Fine Tuning Proceedings.

LeSEA's KWHR also broadcasts from Hawaii. Of course, there's also amateur and military transmissions. It seems likely there would be HF avaition traffic from Hawaii, but I'm not 100% certain.

are " misposting " the ebay urls intentionally ? ..... or is it a
mistake ? the auction locations you are posting (read them
yourself) do NOT reflect the auction number urls.
(only item 577...)

people " can " find your frg-7 auction and the 7 others by searching
" by seller " and typing in your " kk4tl_is_me " ebay ID and then
going roundabout to " sellers items " .

typing in yaesu FRG-7 in a general ebay search also works .....

73s
k.....

Tom,

You might try an rf choke in the agc line near the agc detector. With
fast attack that usually means small filter capacitors on the agc
line. Rf can be coupled into the agc line that larger time constant
capacitors would filter out.

I have also found that decreasing the capacitors at each controlled stage to try and speed up the attack times resulted in instability of stages due to not enough rf decoupling.

As another poster mentioned, using a low source impedance on the agc driver amplifier will allow you to use larger capacitors on the agc line. That can solve most rf on the agc line problems.

Regards
Gary K4FMX

889. Re: Lightning Protection - What Do YOU Use?

Newsgroup: rec.radio.shortwave
Date: 2005-06-07 18:29:55 UTC
From: w_tom <w_tom1@hotmail.com>
Message-ID: <42A5E7A3.B1BDC885@hotmail.com>
Source record: 24378

Yes, an improperly installed lightning rod can cause damage ... because the human has failed to install or maintain the most critical component in a lightning protection system: earth ground. So what is Michael's point? Whether it be lightning rod or radio station or telephone central office switching station. They all suffer direct lightning strikes and must not suffer damage. Protection is defined by quality of and connection to earth ground which is why properly earthed facilities need not suffer damage.

Bulldozers rip out a ground system for a radio station. That proves that lightning damage cannot be avoided? That demonstrates why lightning damage is due to human failure. Yes grounding systems can also deteriorate with age. If a human does not maintain it, then lightning damage can occur. Human failure. Protection is only as good as its earth ground. So what is your point? That one should quit because lightning damage is unavoidable?

I was building surge protectors decades ago. Some unfortunate failures. Some spectacular successes. One never resolved mystery. One fact was consistently demonstrated and repeated by industry professionals even in IEEE papers. Protection is only as effective as its earth ground. By your own examples, inferior earth grounds can result in damage. Improper connections of a lightning rod to its earth ground caused failure. So what? Inferior earth grounds are examples of human failure. Earthing defines protection from lightning.

Michael Terrell demonstrates that damage occurs when the human does not install or maintain sufficient earthing. However since protection might not be large enough for the rare 200K amp lightning strike, then we should never bother with any protection? What kind of reasoning is that?

Most all lightning strikes do so little damage as to not even leave indications on trees. Even 12 AWG wire (20 amp wire inside walls) is more than sufficient to earth most direct lightning strikes. But we install even heavier wire and earthing grounds to lightning rods so that even larger direct strikes cause no damage. In many locations, human do not install protection for the 200,000 amp strike because such strikes just don't happen. Where it does happen, the earthing system is enhanced. Even in Central FL, professionals have installed earthing systems to make damage irrelevant. Humans

also fix the earthing systems when bulldozers rip it out
because proper earthing is that essential to protection.

For locations with no protection, even a single 8 foot earth
ground rod is a massive improvement. Again repeating the
point. Protection is only as good as the earth ground.
Damage from lightning is directly traceable to human failure.
In locations where a human will never see a 200K lightning
strike in his lifetime (which is most places), then even a
simple eight foot earth ground rod is sufficient. But should
earthing need be marginally improved, then size and cost of
that earthing system increases quickly.

Others fixed their earthing systems and stopped suffering
damage in Central FL. That is the point. Eliminating damage
starts with and is defined by the quality of earth ground and
connections to it. Even 25 strike per year to TV and FM
stations on the Empire State Building need not cause damage -
which is where much of the original research was conducted.
Michael Terrell says that is wrong because humans will not
maintain their earthing systems? Quitters logic.

Michael promotes a quitters attitude. Yes, a lightning
protection system may fail to earth an extremely rare 200,000
amp strike. Yes, most locations don't protect from the 200K
lightning strike because such lightning never occurs. So
what? Therefore he advocate no protection? Why advocate a
quitters attitude? Protection is defined by earth ground.
Properly installed earthing systems can even earth 200K
lightning strikes. But a damaged earth ground system means
damage can occur. Damage avoided if the earthing system been
repaired and was sufficient.

Other radio stations in central FL addressed earthing
problems and don't experience repeated failures. Central FL
requires even better earthing systems. Maybe they also
maintain their earthing systems? How can that be? Well some
humans accept failure as situation normal. Others fix problems
before failure occurs. Some may even insult to prove their
point. But those other radio stations fixed their problems
rather than just repeatedly replace the phone system. They
did not take on a quitter's attitude. They addressed the
solution starting with a most critical system component -
earth ground. One that was sufficient for Central FL.

Looking for xlnt condition (must work 100%) DX-160...

Pic would be nice - as would matching speaker (DX-150) let me know condition
and shipped price (63116).

Thanks - it's appreciated...

There are usually several on eBay at any given time. I'd
also check any local hamfests, since you never know what
you'll find.

> was enough.

Well, the Chinese DID try to overthrow their govt in 1989. There were
massive demonstrations at Tiananmen Square in the heart of Beijing. But
the CCP sent in the tanks and killed everybody, and ever since the
Chinese have had little will for overthrowing the Communist Party. Now
that most urban Chinese are living a comfortable life thanks to trade,
the possibility of a revolution has diminished even further. Of course,
if there was to be a massive economic collapse in the US resulting in
the Americans not being able to buy all the stuff that China produces,
all bets are off.

It's funny how all these people want Yanqui to go home, except when
Uncle Sam has something they want, then suddenly they want America to do
their dirty work for them. It's reminiscent of the countries that tried
for decades to get the Americans to close their bases and leave, but
when the Pentagon did exactly that suddenly they realized that their
economies would be devastated by the Americans going home and then
started protesting to keep the bases open. They wanted American money

without Americans. Sorry, doesn't work that way, no free lunch. The Germans will soon realize this if/when the giant American bases in their country close. They want the "American occupation" to end, but when it does it'll wipe out local economies that have been dependent on American largesse for 60 years. Germany's loss will be Poland's gain. Poland is more than happy to have American bases, and has been campaigning hard to get them.

Have you ever tried to remove a bumper sticker from your car? It's damn
near impossible. I once stuck a Darwin Fish on my car, and when I got
rid of the car I had to pry it off. It made a horrible mess.

It's funny that when I defended Westerners doing business with China as a business proposition disconnected from politics, you called me all sorts of names and accused me of being a nazi. But when Arnie points out that US support for dictatorships such as Uzbekistan can actually harm our interests in the long run (look what supporting the Shah got us) you say that supporting a dictatorship is vital to our interests, and better us than China. While it may be true that Uzbekistan is strategically important, supporting that dictatorship goes against Bush's hypocritical "let freedom ring" rhetoric as well as your own desire for China to be free and democratic. If democracy is good enough for the US, and a desirable outcome for China and NK, then why not the Uzbeks? Or are they not important, expendable in the cause of wealthier, more powerful nations?

I may sound sarcastic,but why would anyone need a Realistic DX-160?
This radio has: poor frequency resolution (main dial+amateur band
bandspread only), single conversion (awful images every 910 KHz),
undescribibly low dynamic range (was probably OK in the 50's and 60's
), single 4 KHz mechanical (!!!) IF filter (surprise), substantial
drift,especially when used in CW/SSB mode...
May I suggest a Realistic/Allied SX-190, a MUCH,MUCH better designed
and built receiver. It might seem very strange.but both -160 and
-190 came from the same manufacturer.if not mistaken. Believe it was GRE
in Japan.

Source record: 24600

with the Freeplay Summit radio. I noticed when I googled that this group has people with some experience with this radio. I purchased mine about two years ago and it appears the battery pack is dead. The very small manual says to remove the back and I can take out the battery pack and replace it. However, when I get the back off, I see that the battery pack is soldered to a circuit board and there seems to be no means to just unclip the batteries themselves. The batteries are wrapped in plastic with wires coming out. Do I take off the plastic around the batteries? Or do I just throw the thing out and get a different radio?

I have gone to the web sites for both the manufacturer and the US distributor and neither place has any technical support information at all.

Thanks for any help people can give me.

Mary Deaton

Since the fun flame feast we had over lightening
protection, I thought it might be very usefull
to newbies to make some points clearer then I
think is common.

First I don't care if anyone choses to pay the
slightest bit of attention to what I say. I am
only trying to pass on the help that I received
from others in the past.

Forget about protecting your radio and electronics.
Think instead about keeping your home from burning
down, or killing yourself, and your family.
Lightning fires can spread as if an accelerant
was used.

Think about what trouble you might face if your
installation was "illegal", found to violate the
local or state electrical code and your insurance
company may be able to refuse to pay.

Refuse to pay anything.

I won't bother posting links to the National
Electrical Code, they are simple to find.

You might want to your insurance agent, or read
your insurance policy. Call your local fire
department or building inspector and find out
who handles electrical inspections. Call them
from a payphone if you fear bringing down the
harpies of code enforcement upon yourself. And ask
what the rules are. Copies should be availble
for public inpsection at the planing and zoning
commision and/or the local library.

All I can say is that in my location, there are
strict rules requiring adherence to the NEC. And
my insurance has a clause that clearly states
that non compliant or non apporoved modifications,
additions, "may result in denial of your claim".
Yea and the sun might come up Friday. Any takers
of a bet that they would pay?

The fire marshal told me that if a non conforming
installation caused a fire that caused injury or death
WOULD face prosecution. Period. No exceptions.

That ALL of these prosecutions have resulted in convictions.

So at the very least, meet the requirements of the law.
I have had two direct hits, the first vaporised the top
2' of my 108" 10mtr whip, the second vaporised my 70'
#14 hard drawn antenna, the 9:1 matching tranformer,
and blew the metal case to dime sized pieces,
and blew holes in my burried coax.

It also deprogramed most programable devices in the house,
and the rear motion sensor failed. The failure might not
have been related as the PIR was ~15 years old. None of
my radios, PC or HiFi/TV had any damage (other then
requiring BIOS resets, scanner/radio memories reprogramed
and the like)

I am not saying that you can save your radios,or even save
your home. If one of the killer bolts that appear to be so
common in FL manage to hit your home, all may be lost.
As bad and sad as that would be, it would be worse to
face the loss of your home insurance, a fine, and possible
trial and going to jail.

When I got my first SW my dad insisted that we "put
up the antenna correctly, and install a "lightning
protector". He went on to warn me that the protector
might save the house but the radio would be ruined.
And I had to disconnect my antenna anytime I wasn't
listening, and to never ever listen during storms.
He took the next day off, an unheard of event, the
only other time I can remember him taking off was for
my sister's birth, and we went to the local radio/tv
parts house and bought 100' of "antenna wire" with
dog bone insulators. When I married and moved from my
parents home, we carefully took the antenna down. It
was the antenna that got hit where I we now live.

I still have the a 6" piece with the melted blob of
copper that I keep on the wall below my first SW QSL
card to remind of the joys and sorrows of SWL.

My HF receivng antenna is at varaince withthe NEC.
The electrical inspector wrote me anice letter that
my departure fromt he NEC did not create any additonal
risk. I also have a ltter frmo my insurance company,
not the local agent, but hte home office sttaing my
varience is accepted as long as "woire that enter
your home are bonded as required by the NEC." A little
extra effort to be sure, but well worth it. If we get
nailed tonight and manage to get out alive, I will have
teh cold comfort of knowing that I have not only done
all I could, but htat I will face no legal of inusarnce
problems.

Flame me all you want, but if I can motovate one person
to take the proper steps to prevent lossing their house,
life or freedom I will feel good.

Terry

The best I ever heard was the guy in the US who couldn't tell
from the accesn whom he was dealing with. The clue came when the help
desk guy told him the problem was because he didn't have sufficient
rupees in his account.

Personally I've had good and bad Indians and good and bad
USians.

If I can't understand either kind, I ask for someone who can
speak and troubleshoot in ubderstandable English.

You clearly misunderstood the thrust of my question. FWIW, I didn't imply that they were innocent of wrongdoing, or that they didn't belong in the pokey.

The response that I expected from the OP was that they were inferior human beings because of their race. I wasn't trying to draw him into some social commentary or discourse on the quote-unquote fundamental inequalities of our system, or however some may want to characterize (or mischaracterize) it. I just wanted the guy to come right out and say that it's because they're blacks, and black's are incorrigible. That seemed to be underlying sentiment he was expressing...I just wanted to help him go all the way if my sense of what he was saying was correct. Then I could freely abuse him as I abuse Al Patrick.

With cuhulin gone, I'm bored. <jk>

Wow, I appreciate all the work you've done to try and help out. The station I did hear was most definitely in Portuguese (everything ended in "ao" versus "ion"). I had it again last night with a smaller opening, but the signal was so weak and the static so bad, that I just gave up. I intend to keep plugging. This is a matter of principle! LOL

Thanks again for your help. Nice to know there are people out there willing to lend a hand (ear?) when one gets stuck!

Imagine where we yanks would be right now if we had just given up when
the English killed the first lot of us. You're right: things have
nicened up there for a lot of the people in China so the will to
revolt is gone. The Chinese are becoming like a lot of us Americans:
fat, lazy and complacent.

I was in Germany when the first base closed: Zweibruecken AFB back in
the late 80's. The first people to yodel were the taxidrivers as
their main source of income left. I'm pretty much 100% Kraut (well
Austrian - same difference), and I was sorely embarassed by the way
the people acted.

You are also correct that everyone wants Yanqui to go home - BUT -
leave your wallet. Poland would be good for our bases, but they are
already living off of German reparations, so anything else would be
gravy to them.

My sole point in writing back to Blown Chow (Ralph) or whatever the
hell the person's name is, was that I got sick of their political
rants in response to every post that looked at buying a Chinese radio
or something.

Same shi+ different weekend, just like the Great Liberty Net. :)

Oh, did ya happen to hear yesterday, one of the Great Lib Net
'regulars' called into Alex Jones' live radio circus show on WWCR!

Folks it was a big time LAUGH RIOT! (I'll give y'all a hint, it was the
kookinschlong from MI who usually checks in later in the evening..
On and on he went with his tired old rant about he British Monarchy
and how all the worlds problems could be solved if the pope would
consecrate russia to some cat-o-lick saint...I think it was "the-virgin
our-lady-of-perpetual-motion" or something like that....)

The goofball would not f-n SHUT UP and Alex Jones *hung up on him*!

Now folks...when a paranoid loon like A.J. of Infowars hangs up on
you, you just know you're ready for a FREAKIN RUBBER ROOM....

I laughed so hard though I was gonna wet my BVD's!
If you missed it, you missed a classic paranoid shortwave radio moment.

"Its foulness was itself a desirable quality: the principle of
Dreckapotheke or "filth-medicine" dictated that the most disgusting

concoctions were the ones that did you the most good..."

He was worthy of ridicule. You produced some of your best work in realigning his status within this mainly august group. Me? I haven't written since his demise. Someone had a theory that a scapegoat is needed to form a community, whether it's a spiritual community or not. Sadly, there are only a few likely candidates but as far as I can tell, they don't measure up to anywhere near cuhulin's heaving haunches. I hear Cuhulin rented 'Dog Day Afternoon' a while back. He thought it was a porn flick.

Hi Frank,

you can get it here:
http://www.si-tex.com/

You can call Curt Dale
Cust. Service Dept.
SI-TEX Marine Elec.
Tele: (727) 576-5734 (ext. 110)
Fax: (727) 576-5547

He knows what this radio is. The only thing is this Nav-Fax 100 doesn't have a headphone port. The HF3/P that I was going to get from the U.K. did have one plus a crummy wall wort supply but that was $288 shipped. For the $150 all you get is the radio, a DC PSU cable with fuse holder and fuse, and a 30Ft antenna attached to a RCA phone plug.

But you can use any 12DC 300mA PSU.
It does say it uses a regulated one though. They may have one with "accessories" since there was a check on the box for it that wasn't checked off in my case.

But the sound is very good for a radio in this category. It's like a tabletop good portable type radio. British made and built well. Nice fly wheel action.

I've been playing with it {the radio} all night :)

Lucky

Here Frank,

But they only show the 200 model. I know that model is much more expensive.
You have to call for the 100. I see it selling anywhere for $340 to $600.
But I don't need weather faxes so....

Operating an international shortwave station requires a huge budget. Governments and religious organizations have had the budgets and the missions historically to run them. There have been commercial broadcasters, such as WRNO and WNYW, but they have either folded or taken to renting their facilities to religious and political broadcasters. International shortwave, once popular in the 1930's in the U. S., only has a few American enthusiasts. International broadcasters know that, and have redirected their programs to satellite and internet streaming. Shortwave is still popular in the Third World, and there will be stations to satisfy that market.

The tropical shortwave station, usually operating in the 90 or 60 meter band, is generally a domestic broadcast taking advantage of lower static interference and a larger coverage area. Here too, in some countries, it is giving way to FM on vhf frequencies.

I"m not sure if this article will make it to rec.radio.broadcasting as I'm not sure how to email articles for moderator approval these days. HOwever here are my thoughts, so I hope you read the other groups you crossposted to.

sHortwave will still have a decent future ahead, especially for broadcasting in most of the developing world. YOu see streaming audio and net connections are not as ubiquitous as some of us might think. I still listen to the BBC now and then and other broadcasters over a radio, not through a net connection. for many in the developing world technologies such as the freeplay crank it up radios will offer shortwave where a net connection is not available to them.

See back issues of POpular COmmunications and read the appropriate columns for similar views. I don't have links, I read the magazine.

- Amen!

do like the variety of Shortwave;

Planet World News on WBCQ was pretty good..
BBC Radio, China International,
Radio Canada, Radio New Zealand, Radio Australia..
Heck ! Even WWCR & ALEX Jones have something to add..

As a Kid I read George Orwells "1984" (maybe onece too often)

In 2005 we have Fox News & "BubbleVision" (FNN) filled with Models
reading off teleprompters & Smug men with Dyed brown hair..

Heck, give me "Financial Survival 2000" anyday..

Greetings Mike! No articles just my 2 cents worth. Most people when asked this question think only in terms of the USA. At 300 million population we are a drop in the bucket. Shortwave will continue, but the market and target audience will change IMHO. We are seeing the table top radios of yesteryear gone as the largest world markets cannot afford them. Hense, the rise in the cheap portables that are flooding the world market. The far east and Africa will, and are becoming the target audience as they are growing faster, and are more politically unstable. Every nation or interested party wants to get their voices heard in those regions. Let me not forget central and South America as well. Long live shortwave I think. The real question is what will it look like even ten years down the road. Have a great week! Jon.

I sincerely hope it has.

For many, shortwave is the only place to obtain uncensored news.
Governments don't like such freedom of information, which is why we
should.

937. Wantok Light Radio

Newsgroup: rec.radio.shortwave
Date: 2005-06-08 05:30:55 UTC
From: Mike Terry <miketerry73@btinternet.com>
Message-ID: <3gne4aFd7hb2U1@individual.net>
Source record: 24626

Wednesday June 08, 2005

Another milestone will be scored in the PNG media sector when the PNG Bible Church launches its Wantok Light Radio station on Short Wave on Saturday.

The radio station has already been broadcasting on the FM band in Port Moresby for the last year or so.

The SW transmission will be launched at Kaupena mission station in Southern Highlands province - the "birth place" of this church in PNG, set up by American missionaries about 40 years ago.

The SW launch now takes the Port Moresby-based radio station to the rest of the country and overseas.

Its pre-launch transmission on SW in the last few days has been received loud and clear around the country, judging from those of us listening from Madang.

Over two years ago, no one thought a community-funded radio station would be launched on the Short Wave.

This approach to radio broadcasting, popularly called "community broadcasting" where the community backs a station was until then an alien concept. Community radio broadcasting is popular in many parts of the world.

Several groups, particularly churches, have to date set up radio stations through this concept.

Broadly, community radio stations are owned, funded and managed by members of a community.

People in the concerned community raise funds for the upkeep of a radio station. They may use limited advertising in their broadcasts, often as "sponsors" for a very short time as specified under their license.

A community broadcast station are set up to serve groups of people deemed as not being served by the mainstream broadcasting stations or media.

They serve a niche in a community and often have agendas to pursue and promote. They are subjective and uphold the values of the sponsoring group and the community they seek to serve.

Universally, community broadcast stations are non-profit entities established to serve a community interests where the mainstream media overlooks or cannot reach.

They are often stations with limited broadcast capacity but this varies from country to country. They can be stations with limited broadcast hours to

24-hour outfits.

Community radio stations are independent from the government. The community financing is perhaps one of its main attributes that distinguishes itself from the other radio broadcast sectors.

Though they are predominantly self-funding, in some cases in the world, programming is funded through government grants and also some of the stations that are starting up get start-up funds from their governments.

This funding option can be looked at in this country since those in government and elsewhere in society recognise the superiority of radio over other forms of media in PNG.

There can be trade-off arrangement for this where government messages can be broadcast in exchange for the start-up funds.

Imagine in this country so rich in culture and language, where each community would set up its own community radio station on common grounds such as a language community radio station would act as a catalyst for improvement in lifestyles of people and maintenance of language, traditional songs and folklore on the airwaves. The community radio station would act as a living archive of a community.

This would be in a situation where a well-meaning government went out of its way to support their establishment along common terms such as language.

With government support, community radio stations could be the answer too much of the information dissemination and communication needs of the government, churches and other interested groups.

Grundig Traveler VII

The Trav7 is the very tiniest in size, probably the only true pocket model ever made.

Best receiver (most sensitive) I've ever heard with the antenna whip collapsed fully down. But with the whip fully extended sensitivity doesn't improve much, and there is no antenna jack.

Antenna up: sensitivity is F (compared to other portables)

Antenna down: A (it beats the **** out of my Sony 7600 whips down; whips up the Trav7 is a joke compared to the Sony).

But for a rig with everything in the pocket and phones, IPOD style, the Traveler 7 beats all, amazing.

It is dual conversion.

It didn't sell because there is no band switch, so you have to use up all the 10 SW memories to jump from band to band, so in effect there are no memories left to dedicate for fave stations. So really, you have to manual tune up and down the band, or use direct entry of freqs. which are hard to remember.

The rigs I prefer are a desktop R75 and good outside antenna, and the Grundig Trav7 for anything away from base.

An apparent Yale period photo of Kerry has been up on Drudge for a few days.
What is really (S)kerry about that photo is that I knew a few Naval officers who
had that same in-bred east-coast (USA) look to 'em. Got that look as if to say
"My s**t don't stink." They were always a fun bunch.

I have that same radio in the Radio Shack brand name. It's not bad. I bought mine about 2 years ago for 50 bucks. What it does, it does well, and the sound is very good. It's not a super sensitive SW radio, but it does receive SW stations, and it does not drift. Am/FM are adequate, and clear. You can receive CB and some TV chamnels, stuff like that. It's fun to tune around on. The dial is not very acurate, but not many cheap analogs are. As you say, a knock around radio, that is what it is.

I use it, when I find a station I want to listen to for awhile, I flip it on, while I DX with other receivers. It stays on the stations, and gives you a loud clear signal. For 50 Bucks, it was worth it.

I noticed some guys mentioned the Grundig S 350. I bought mine at Radio Shack last year for a 100 bucks, and it was worth every penny. I like it, but I have also seen other people in this group say it's junk, they hate it, etc.

"But when Arnie points out that US support for dictatorships such as Uzbekistan can actually harm our interests in the long run (look what supporting the Shah got us) you
say that supporting a dictatorship is vital to our interests, and better
us than China."

We have an unfortunate habit of supporting some really bad people because they support some short term goal. We really like having that airbase in Uzbekistan so we can overlook a few domestic incidents. Osama Bin Laden, Saddam Hussein, Agusto Pinnochet, the Shah of Iran, Manual Noriega and a long list of african despots also come to mind. Unfortunately these bad guys turn out to have some embarrasing habits that inevtably are exposed in the press. We deny any connection and wonder why the bad guys in many instances turn on us.

Yes, perhaps we do at times support some ostensibly bad folks out there. One thing one must bear in mind though is the fact that governments do not necessarily have 'long term friends'. Governments have 'long term interests'.

There is a difference, 'tard boy... please try to pay attention.

Remember the CB craze of the 1970s? It became insanely popular for a while with a very wide audience, but then the sunspot cycle created horrible conditions, and the faddists went somewhere else. The CB survived, though, and even in these days of GPS and satellite and internet, there's still nothing better for truckers and other interstate drivers than the old familiar CB. I listen to channel 19 all the time, and it's just as busy as ever before. CB is not about to go anywhere.

Neither is shortwave. I think shortwave is in a decline, but I think it will survive and even flourish over the next few decades. I don't know who will be on the SW band in 10 years, but I'm sure someone will be smart enough to realize what a powerful medium radio can be.

I think being careful is a good idea, but you're remarkably pessimistic.

Last year one of my antennas took a direct hit. Everything in front of the polyphaser was destroyed. Everything in back of it was fine. I'm sure a strike could have done more damage - but it's not hopeless.

In my case, a strike would need to follow over 300 feet of underground coax to get to the house.

Reading your house insurance policy contract is a good idea, in case there is something in there. There are differences, but even though they're insured with different companies in different states, the insurance contracts I've read for homes in CT, FL and NJ look to be based on the same boiler plate form.

Insurance companies aren't likely to deny a claim if you can show you made even a minimal good faith effort to have a safe system.

The courts would rule against them unless they could point to a specific provision in your policy allowing them to deny coverage. The company sets the terms of the contract, so anything in doubt will be decided in your favor.

On the other hand, if an insurance company inspected your house and saw an antenna they might decide they don't want to insure you - but they'd need to give you time to correct the problem - and you'd have some time to try reasoning with them if you really have made (or are willing to make) an effort to make sure the system is safe.

But frankly, I doubt antennas are on their minds. A friend with a serious antenna farm got a letter threatening to drop him if he didn't put a second railing on his back steps. Hard to imagine they could see the steps without noticing the antennas.

Your concern someone could be tossed in jail for an unintentional building code violation is incredible.

I'd have to concur. Unless you were so criminally negligent and put others
at risk, such as tenants, I see no reason you'd be prosecuted.

Also, insurance would pay your claim but then drop you.

And some won't pay... not necessarily for a lightening strike but for an auto
accident.

A word to the wise.. don't insure with AAA.

Trust me.

FWIW, my Grundig YB-400PE has served me very well outdoors, many times, whether camping, picnicing, etc. Granted, it's more expensive than the radio mentioned in the original post, but I think the performance you get is worth it. I think if I was looking for another "outdoor" radio I would look at the S350, though, since it seems a little more "rugged".

Assuming you can find a replacement battery meeting the appropriate specs it wouldn't be a difficult job to switch them, but if you're not familiar with soldering and electronics in general, I'd suggest you contact the manufacturer and ask about sending the radio back for replacement of the battery...better to spend a few bucks than end up having to buy another radio.

Your mileage may vary...

I should be able to hear it fairly easily here in California if I'm ever
up around 1000-1100 UTC (the middle of the night here).

I actually appreciate that as it's been a real pain in the neck (no pun intended) for the last (almost two years). But what the heck, it'll only take about $30,000 to fix.

I generally get my best reception of the PNG's and Indo's here just prior to, and the hour or so after sunrise.

Theoretically, it COULD happen, if the DA was in a bad mood or something or they needed to make an example out of you. I think it would be more likely that your insurance company would find some way to weasel out of paying for the damage. Ever since insurers lost a bundle of cash speculating on tech stocks they've been finding creative ways to cancel policies, or not pay claims. They've been saying that labrador retrievers look like rottweilers, therefore you have a dangerous dog and that's an unacceptable risk. I figure that if your house burned down because your antenna was hit, they'd say that the antenna was technically illegal, therefore the damage is not covered. That may be true, but I doubt that you'd be thrown in jail for it, unless your entire family died and some bloviating politician wants to make an example out of you for whatever reason. I also don't think that lightning fires spread "as if there was an accelerant". My grandfather once lived in a rural area where the power poles didn't have grounds. When lightning hit the pole, foot long flames came out of the sockets. It ruined everything electrical, and he had to rewire his house several times, but it didn't burn down.

"Mark S. Holden" wrote:

I think being careful is a good idea, but you're remarkably
pessimistic.

Last year one of my antennas took a direct hit. Everything in front of
the
polyphaser was destroyed. Everything in back of it was fine. I'm sure
a
strike could have done more damage - but it's not hopeless.

In my case, a strike would need to follow over 300 feet of underground
coax to get to the house.

Reading your house insurance policy contract is a good idea, in case
there is
something in there. There are differences, but even though they're
insured with different companies in different states, the insurance
contracts I've read for homes in CT, FL and NJ look to be based on the
same boiler plate form.

Insurance companies aren't likely to deny a claim if you can show you
made even a minimal good faith effort to have a safe system.

The courts would rule against them unless they could point to a
specific
provision in your policy allowing them to deny coverage. The company
sets the terms of the contract, so anything in doubt will be decided in
your favor.

On the other hand, if an insurance company inspected your house and saw
an antenna they might decide they don't want to insure you - but they'd
need to give you time to correct the problem - and you'd have some time
to try reasoning with them if you really have made (or are willing to
make) an effort to make sure the system is safe.

But frankly, I doubt antennas are on their minds. A friend with a
serious
antenna farm got a letter threatening to drop him if he didn't put a
second
railing on his back steps. Hard to imagine they could see the steps
without
noticing the antennas.

Your concern someone could be tossed in jail for an unintentional
building code violation is incredible.

Here in central KY a good frined installed a CNB and din't ground the mast/antenna. He got luck and a strike set his den on fire. About $5K. Whne the adjuster came, he saw the remains of the antenna and looded for a groundrod. Finding none, he asked my frined who replied witht he truth. The claims was rejected, his policy canceled and the electricla inspector came around that evening and gave him a citation. He spent the next week talking to lawyers, and when it came out that he had't grounded the mast per regs, they told him he was screwed. So he got to pay for the repair, and go to court where he was fined $500 being a first time offender.

In a isimalr case 6 or 7 years ago, a guy put a TV antenna on his roof.
With no ground wire. During a T-storm he got lucky. Set the house on fire and inspite of the heavy rain it was a complete loss. His wife died
and the DA was going to press charges. The gent died the day before the Grand Jury. I have a cousin who is a lawyer, I know, I hang my had in
shame as I admit this in public, and I asked her about it at the time.

She was of the opinon that not only would he be indicted, but that he would be convicted. This was before he got extra lucky and died.

Maybe the planing and zoning nannies are sane in your neck of the woods, but around here they are petty nazis. If they catch you doing "substantial"
work without a permit, you're screwed. If they find you installed your own electric water heater, you get a nasty fine, if it is a gas water heater, you are
really F$#%^. People have gone to jail. If it is your rental property, you are in real trouble. You can avoid this by having a licensed electrician or plumber "aprove" your work. They even go around to al the home centers and get records of everyone who buys a water heaters. They find a lot of Mr. Smiths and Jones who paid with cash. There was a reading of a bill that required stores to gather legal IDs but it died in commite. I am lucky because I have
a plumber and an electrician for friends and can get them to sign off on my
work. But around here the government is so determined to protect us they
won't let a little thing like reason or common sense to intrude on their grand
plans. I don't worry too much about the new world order because it is here
in central KY. When I retire we are going to move out of this over protected
locale....Hell they even banned smokining restruaunts. And I don't even smoke and didn't frequent places that catered to smokers.

Personal freedom and liberty?

Not aroundhere.

And I posed a worst case view. I have had two major hits that destroyed myantennas and did no damage to my radio gear. I am glad I don't live in
FL where the lightening strikes must be killer. I mean if MW stations get
destroyed with the frequency stated in the lightening protection thread,
it must be nasty down there. I aksed the engineerng staff of several local MW outlets and none of them have had damage in over 20 years. And one TV station was damaged by multiple strikes on the power/telco systems. They lost a lot of PCs telecom gear etc, but their production and transmission system came through unscathed. Had to use cell phones for a couple of days. But like I said, my post assumed a worst case conditino, one where the bolts are so large that protection is doomed to fail. In such a case, the very least a ham/CBer/SWL should do is to meet the local codes. Looking at the cable and DBS isntalls I have seen all over the state, that level isn't all that hard or expensive.
Run coax into "static" block, run (too thin) ground wire to (sub standard)ground rod.

Terry

The idiots at BBC and DW and VOA may deepsix their SW operations, but in places like Africa SW is STILL the best way to reach rural audiences, most of whom live on $1 a day yet who have SW radios. Also, SW is the best way to get around media censorship. Look at Zimbabwe, where the opposition has taken to SW in order to get anti Mugabe messages to the public. In places where local media is heavily censored, SW can get the opposition's message out to a wide audience. There is a lot of clandestine SW to China, not only RFA but private operations like Sound of Hope. And of course there will always be the preachers, who don't have the money or local market share necessary for local media but who can turn a profit on SW. The new Radio Wantok from Papua New Guinea that has been discussed here mostly broadcasts tapes of American right wing commentators, from reports I've read, but the locals still consider it a community station.

There's always Sawa and Farda, both IBB operations, although Sawa is
only on FM. And then there's the Studio 7 service to Zimbabwe. But most
VOA services have been cut deeply, and they'll probably cut the rest
soon. DW has already cut all its Americas services, and BBC is heading
in that direction.

973. Shortwave Antenna

Newsgroup: rec.radio.shortwave
Date: 2005-06-08 20:51:33 UTC
From: Bill Amann Jr <wamann@columbus.rr.com>
Message-ID: <pTIpe.20116$iu.8160@tornado.ohiordc.rr.com>
Source record: 24462

A question to the group and please don't get mad at me ! Question is what do you think is the best commercial built antenna? I am using a Alpha Delta DX-Ultra now and I think it is a good antenna but always looking for better!

974. Re: Realistic DX-160 wanted...

Newsgroup: rec.radio.shortwave
Date: 2005-06-08 21:10:20 UTC
From: "John S." <hjsjms@cs.com>

Source record: 24463

Well sure offer away, but remember he did indicate specifically that he was interested in the DX-160. The SX-190 is in my experienced ovepriced on the secondhand market for what it is.

The DX-160 and all it's brethren are more reasonably priced, have more complete coverage and are pretty decent performers for the money. Indeed I found an old Popular Electronics that reviewed the 150B and found it to be quite a performer (by 1970 standards) for the money. My 150B that I picked up at an estate sale complete with original speaker for $10.00 would hear a lot of stations, and I though it looked pretty neat as well.

975. Improved diode selection for AM detection

Newsgroup: rec.radio.shortwave
Date: 2005-06-08 21:20:42 UTC
From: r2000swler@hotmail.com
Message-ID: <1118265642.467892.134670@g47g2000cwa.googlegroups.com>
Source record: 24464

Almost all AM detectors use Germanium diodes.
This link shows an interesting alternative:
http://www.wsdmag.com/Articles/Print.cfm?ArticleID=8628
Ge diodes have a typical Vf (forward conduction volage)
of .4V.
"Silicon Schottky diodes are commercially available
in four different versions. They offer forward
voltages of approximately 600 mV for high barrier,
330 mV for medium barrier, 280 mV for low barrier,
and 180 mV for zero-bias detectors.".

I am going to try and drive the detector diode in
my R2000 with a ~20K resistor feeding the junction
of to force the Ge diode slightly into conduction.
(for a diagram of the R2000 please see:
http://www.qsl.net/kc7bum/schematic-1.jpg
for a diagram of the R2000)

But I would prefer to find a diode with the lowest
Vf possible. Back in the mid 1970's GE had a diode
with a very low Vf, but I can't remember the name.

Does anyone know of a source of Shotkey "zero-bias
detector diodes"? And will diodes from a microwave
detector work in at 455KHz? I have several microwave
detector diodes that I would sacrfice in a minute if
there was a good chance they would work.

This weekend I intend to go to a friend to whom I have
loaned my ancient R392 which has a 455KHz IF out port,
and see how it works.

Terry

976. Microwave detector questions

Newsgroup: rec.radio.shortwave

Source record: 24465

Digging through my junkbox I found I have two Omni Spectra
20090 detectors that use Alpha D5326098 diodes. They measure
a Vf of 240mV compared to a "typical" GE which has a Vf of
358mV. I measured 3 In34 and 3 OA81C and they all matched
within a mV or so..

I couldn't find specs for the Omin Spetras, but I also
have a HP 8472B "crystal detector" that The specs say
"low barrier Shottky"". It also measures 240mV.

I can easily get the Omnis apart so they may become
sacrifed tothe greater glory of SW.

In my net searches I was a little shocked at how expensive
the microwave detectors are even used.

I'm not an expert on this by any means but as I rcall we went through the Schottky diode craze about 20 years or so and for the most part it seemed to be bunk.

Perhaps one of our resident techs might weigh in on this.

VoA will definitely not disappear anytime soon. There are too many
minority languages it supports. VoA, Sawa, Farda and all the other
stations run by us here at IBB will continue as long as they are
politically necessary and convenient. After all, it is nothing more
than a propaganda war we're fighting on the airwaves. I've got this
contract for at least five more years, and the IBB has been mandated
by Congress to outsource (contract operation) 35% more of its
stations, so there is a future, but an indeterminate one!

980. Re: Shortwave Antenna

Newsgroup: rec.radio.shortwave
Date: 2005-06-08 22:50:06 UTC
From: Joe Analssandrini <analssandrinij@yahoo.com>
Message-ID: <1118271006.736318.130970@z14g2000cwz.googlegroups.com>
Source record: 24469

Hello Bill,

While I have no personal experience with the Alpha Delta DX-Ultra, PASSPORT rates it the best of all commercially-built antennas they have tested.

Of course, a better antenna would be an array of several 300-feet towers and remember - the only thing separating you from them is the fact that you haven't yet won $100,000,000.00 in the lottery so that you could pay for them. Get with it kid! Win that lottery! ;-)

Failing that, PASSPORT (and I personally) recommend the Wellbrook ALA 330S Active Loop Antenna as an excellent supplement to the DX-Ultra, especially in the summertime when there is lots of atmospheric noise. The Wellbrook EXCELS in attenuating that noise (it is not responsive to it) and it also GREATLY attenuates local electrical noise. The antenna is so quiet that this past winter, when few on the east coast of the US were able to hear Australia's 2300 UTC transmission on 21740 kHz, I was able to hear it, if not loud, certainly clear (it was coming in at an indicated S-3(!) to S-5 on my AOR AR7030 Plus receiver). And lately, as last year, this antenna/radio combination is as quiet in the summer as in the winter.

You might want to check out the latest reviews of this antenna in the 2005 PASSPORT, the 2005 WRTH, and Jay Allen's review on RadioIntel.com.

If you do much tropical-band DXing or other faint-signal DXing during the summer, in my opinion, you will find no better antenna than the Wellbrook ALA 330S.

Best,

Joe

Thanks for the info. I think Pete G. did some work with this radios and came through with some significant performance improvement mods (or was it the little TenTec radio???). If it's even 1/4 what the HF-150 is, it is a decent radio for that price!

I'm not an expert on this by any means but as I rcall we went
through the Schottky diode craze about 20 years or so and
for the most part it seemed to be bunk.

Perhaps one of our resident techs might weigh in on this.

dxAce
Michigan
USA

I am hoping to improve the AM detecton in the R2000. I have done some
experimenting and decided that changing the caps was worthwhile. I
tapped straight off the detector with a DC coupled hi-Z FET, fed it
to my classs A servo heaphone amplifier and switched back and forth
between the my buffer and the Rec out, and then the input to the power
amp IC. This porved somehting I already knew, but IC audio amps
suck. Lots of crossover distortion. By taking my audio upstream
I was able to understand weak singals. As opposed to just telling
something was there. I using my HiFer beacon feeding a attenuator
and using my MC power divider to feed my antenna and the RF
to the R2000s. This allowed me to nearly duplicate real world
conditions with QRN/M. I used a local 24 hour talk radio station,
for my modulation source. Pulled it from my DX398 tape out.

I am going to be very busy changing caps for the next month.

I have decided that some of the low level "Grunge" that I
wrote off to PLL phase noise is in fact distortion caused by the
caps, and the nasty cross over distorion in the audio power IC.
I am going to replace that stage with a much better design.

While I would love to buy a new, or better used receiver, I have
to stay within a budget, so it is either modify or accept.

Of course some people mihgt nominate me for "sows ear
to silk purse" prize of the year.

Later tonight I am going to try adding some forward bias
to the AM detector diode. Distortion is after all another form
of noise.

running dogg demonstrates why these pictures of the 'primary protection' system require inspection:
http://www.tvtower.com/fpl.html

A household earth ground (another earth ground) is essential also for human safety. The neutral wire failed inside a transformer. Building's earth ground had been compromised. But since the lights still worked, the homeowner did nothing. To transport electricity back to the defective transformer, the house use a natural gas line. Fortunately no one was home when gas line gaskets finally failed at the meter; the house exploded.

Many say lights work just fine. Therefore, don't worry. Be happy. Even the military calls for inspections of these grounding connections every 5 years or sooner. A homeowner must take responsibility for his ground connections. The consequences sometimes can be catastrophic as demonstrated by multiple examples.

Tebojockey,

Maybe this website will be of some use to you (and others):
http://paginas.terra.com.br/arte/sarmentocampos/EmissorasBrasil.htm

The last update is for May 2005 and it lists 4 Brazilian stations on 4775 kHz (including Radio Liberal) as being active. The bad news is that all 4 stations are 24 hr stations!

Good luck with getting an id on the station!

Good DX

After some soul searching, I'd have to refrain from using Mister Hill as a subject. He's not nearly virulent or stupid enough. There are, however, two likely candidates for scapegoatism. I don't know if my carefully crafted disposable trash writing is worth the effort for the non entities.

They're like Cuhulin's chickens. Even after the heads are cut off, they still twitch and try to run, albeit somewhat spasmodically..

Yeah, it does to me too. I doubt that electricity would be transported back to a transformer via natural gas line. Natural gas is awfully volatile. Also, if the neutral wire INSIDE one of those huge oil filled transformers up on a pole failed, how would the homeowner know, much less act? I suppose that an arcing transformer would cause horrible SW interference (not sure about MW) but most people don't have SW radios. In that case only a local SWL or ham would notice.

All new construction around here requires 400 amp household grounds built into the foundation. Typically the special ground rod is simply stuck into the concrete. I think it should be actually buried in the earth, but apparently that's not necessary. Fortunately lightning storms are rare here, and when they DO happen they're rarely on the scale seen in Florida. (I never understood why people think Florida is paradise; they have some NASTY weather there and some really, really bad urban ghettoes.)

I'm afraid you're right about that. Corruption is rampant in most, if not all, governments. A good start may be making *all* corporate political contributions illegal...and none of this business of making contributions in your employee's names, either. It's a start.

Yeah, and it ALWAYS blows up in our faces. We prop up every corrupt sheik in the Middle East; the House of Saud, Mubarak, King Abdullah, Musharraf, not to mention our puppet govts in Iraq and Afghanistan. Then we wonder why they want to kill us all. And that's not mentioning the Shah, who was overthrown, and Saddam, who we overthrew because he pissed George Bush Sr. off. And then there's Osama, who is downing our helicopters with Stinger missiles, not to mention the various other ways in which he uses our tactics against us. Radio Havana has claimed that the drones that we were flying over Iran earlier this year were meant to get them to turn on their radar so we could pick up its vital stats. The Iranians didn't bite because, as one Iranian AF officer said, "they must have forgotten that they trained half our guys". What a wonderful mess.

998. FS: upgraded ICOM R75

Newsgroup: rec.radio.shortwave
Date: 2005-06-09 02:16:05 UTC
From: mike maghakian <maghakian@comcast.net>
Message-ID: <yaKdnbUmQPv4OzrfRVn-tg@comcast.com>
Source record: 24488
Cross-posted to: rec.radio.shortwave,rec.radio.swap

I am selling a like new ICOM R75 receiver with two important upgrades. one
is a fix for the broken sync detector that Icom refused to fix and the other
is a murata filter upgrade in the option two slot. these upgrades are worth
about $90. they are very important towards the excellent performance it is
capable of.
the unit includes the DSP unit, original box, manual and ICOM power supply
for free, if you want, I will upgrade the roofing filter to a tighter icom
filter. this upgrade is described in the R75 user group.
price is $425 shipped in the lower 48 states, a bit more elsewhere.

I've considered feeding the tape out of a receiver to an outboard tube audio amp, a single tube 6V6 or some sort. Have you ever tried this?

Combining digital electronics with tube audio would be great. I own a couple of Hammerlunds and love that sound.

for $10.00 <<<

Guess I took, I paid $10 for my 160 with no speaker. Actually, they thought it didn't work, the switch in the headphone jack had filmed over and wouldn't allow the speaker to work. RM~

Depends on what you need and what your limitations
are. Some people need a loop like the Wellbrook
to help their reception; some can use a dipole; and
some can use a sloper. Some, like me, don't have the
space for a big dipole or sloper, and don't have the
ready cash for a loop like the Wellbrook (well, there's
also the matter of managing to scrounge up the funds
for a Drake R8/R8A/R8B, too), so a random wire
attached to a 9:1 transformer will have to do.

Of course, when I get that swamp white oak planted
in the backyard in the next year or two, I'll lose my
prime location for the random wire, so I may have to
invest in a Wellbrook in the long term (until the
trees get big, that is).

Not sure this has anything to do with any leader's or wannabe leader's marks. I don't think, though you can correct me if you think I'm wrong, that there would any difference between Kerry's approach to Uzbekistan or other bad dictatorships than Bush's. This is not a political party issue, it is a general country direction issue. You may be able to point out some subtle differences, e.g., a particular dictator or despot being more popular with one president or party than another, but the general issue still remains. A democracy cannot support tyranny in another country for very long. I'd rather see the Uzbeks free, paying taxes, importing and exporting, and maybe offering tourism than what's going on presently.

We used to call the Latin American dictatorships "banana republics". We need a term for the Asian variety. Suggestions?

Rice republics? (In the US, souped up Japanese racing cars are called
"rice rockets".) But "Asia" is a big place, stretching from Turkey to
Oman to Japan. When that is considered, rice doesn't really fit. Maybe
the Muslim variety (most of the places we're talking about have Muslim
populations) could be called halal republics, halal being the Muslim
equivalent of the Jews' kosher. Any other ideas?

True the Schottkey diodes will have a lower Vf than
your standard garden variety germanium. You will also
have to take into account that the rcvr will be more prone
to hear more man-made interference and also the AGC will
still be active and possibly negate any gains in sensitivity.
Not sure if they will work at the lower freq's well as they are
designed for microwave uses although some do run in
the RF-ID range of 36 MhZ.
A good experiment project but methinks you would be
better off with an external FET amplifier or high gain
directional loop antenna for BCB Dx.

see these for datasheets and app notes:

Yes, I have a SW radio. It's a portable, but I rarely tote it. I've made plenty of on-topic posts, and I'll continue to do so when I have a question that I can't find the answer for elsewhere. BTW...you might want to try it yourself. I think the word is "sycophant". It describes you and your behaviour quite accurately.

> nice to see an OT post by either one of you guys.

You see them all the time. OT means Off Topic. That's why people put OT in the subject line of...here it comes, beerbarrel....OFF TOPIC posts. God, you're an idiot. You make cuhulin look like a legitimate Mensa candidate. I think the phrase is "fucking idiot". It describes you and your behavior quite accurately.

> While you are at it, lay off the queer stuff...

Why? Is your fist getting tired, and you need a break? I think the phrase is "Too much of a good thing". It describes you and your behavior quite accurately.

That's what I just said to you, in different words. Are you -really- that stupid that you not only can't come up with a witty response, you actually throw back the same insult that you just received and believe that it's new and fresh?

My God.

You know, I do believe that you're stupid enough to base a dislike for an
entire nationality based on your experiences with one individual
representative.

If I were you, I'd avoid mirrors (and introspection) at all costs.

Hmmm I don't know. I have to ask him. It has an attentuator in the same spot where it is on the 150 also. Works well. Same type of knob action. Not exactly but very close. I wondering if the "clarifier" is a BFO or some sort of IF passband. Must be a BFO. Interesting this quasi sychronous detector. AM comes in exceptionally well.

Lucky

If you have the space for it, I would recommend a terminated, tilted,
folded dipole (TTFD or T2FD). Barker & Williamson (B&W) makes some
for hams for transmit purposes -- I picked up a new-in-box SWL version
they discontinued a few years ago. I'm very pleased with mine.

Read about them here:

http://www.hard-core-dx.com/nordicdx/antenna/wire/t2fd.html

B&W antennas are available through Ham Radio Outlet

"DesignGuy" wrote:

I've considered feeding the tape out of a receiver to an outboard tube audio
amp, a single tube 6V6 or some sort. Have you ever tried this?

Combining digital electronics with tube audio would be great. I own a couple
of Hammerlunds and love that sound.

I used a stereo class A headphone amplifier buitl around MOS-FETs,
with a JFET input. I don't have the link here, but I will post it when I get
home.
I'm using a 30+ year old set of Senheiser HD424 "open air" stereo
earphones. They Hi-z, 2K units and I have found them to be very
easy to where for hours on end. I have a set of Koss Pro4A, God
I am telling my age here, that I use when listening in noisy locatons, but
they have always given me a head ach and sweaty ears if I where them
longer then 30 minutes or so.

I built a stereo headphone amp using 2 12AU7's to compare the
sound quality of the MOS-FET to holllow state. No difference that
I could hear.

My wife finds trying to reduce distortion on shortwave as "silly".
>From her viewpoint "if you want clarity you wouldn't be trying to
listen to 20W transmitters on the far side of the world".

I built several and was never really impressed with their performance.

I went back to the transformer matched wires or band specific dipoles or inverted
vee's.

I'm guessing you're missing some details about those horror stories.

Not knowing what they are, I've made up some remarkably stupid things someone might say to the insurance company or a local official. I'm not suggesting any of these comments were made by the individuals you've mentioned.

1. I knew it was dangerous but I've been busy the last few years.

2. This fire was a stroke of luck - now I can finally afford to remodel that den.

3. Looks like I saved the cost of a divorce.

Why exclude Florida as a location because of the storms. Washington, DC is known for it's summer thunderstorms and I used several table tops and portables there for years. No problems, although I do unplug power and antenna when the nasty storms roll through. Never had a problem.

If you are concerned about local conditons damaging your receiver consider that: In the midwest it will probably be blown into another county by a tornado, on the west coast it will be shaken to death by earthquakes, in Texas it will be baked to death in the sun, in south atlantic states it will be flooded in a hurricane, in northern states it will be buried in snow and fried with winter lighning and in the north atlantic states is will be drowned in a northeaster.

(SWL's live and enjoy their hobby in almost any location.)

An advantage the coastal areas of Florida have for SWL is excellent soil conductivity.

If you're on a bay or a beach, you'll probably find water if you dig a hole to plant a shrub or a small tree.

I tend to do my listening down there outside with a "portable" 3 meter whip. The reception compares nicely with what I get in CT on a 65 foot random wire.

I imagine the biggest problem with putting in an effective ground system would be maintaining it because the soil is so wet.

Most of the thunder storms happen in July and August, when just about every afternoon ends with a 5-10 minute storm.

Hi guys,

BTW, I forgot to mention the supplied DC PSU fused cable does already have the proper plug attached to it to fit the power jack on the radio so no adaptaplug needed for it. Plus it does come with a small manual and a list of frequencies all weather related!

Still getting to know the radio. Some people think you turn it on for 5 min and know everything about it and how to bring out the best performance from it.
It takes time to "resonate" with a particular radio. So far I'm liking and enjoying it.

Good day
Lucky

The investigator was a personal friend who we stumbled upon as he was returning from the exploded house. He immediately explained what had happened - the broken neutral wire inside transformer and no building earth ground. It was one of those, "Of course. I never realized that could happen." moments. As it would when one is familiar with 'how and why' buildings and utilities are earthed.

Another event created by a missing earth ground was continuous ringing of telephones in some adjacent homes. The offending home was not properly earthed. That house used other utility wires as a neutral wire. The emergency response guy borrowed infrared goggles from the fire department to follow a cable TV wire. Wire was so hot that he could follow that wire behind walls with infrared goggles.

Basic knowledge of how utilities connect make it obvious that electricity could use gas lines (or other conductive materials) as a neutral return - given a failure in the right spot AND no building earth ground. Feel all you want. But earth ground is essential for human safety as well as for other reasons. Facts remain electrical. Feeling has no place here. Either one can say specifically why that gas line was not used as a neutral return - or one does not have sufficient knowledge to respond. Feelings are not sufficient. A doubting response must be able to say why - using fundamental electrical principles. Anything less would be junk science reasoning.

Homeowners have enough in these two discussions to appreciate why earth ground is essential to human safety AND why (and how) that earth ground should be enhanced to provide transistor safety.

Are there any solutions to eleminating or at least reducing the interference caused by low voltage halogen lighting? Like many desk lamps and accent lighting. My only solution so far is to make sure all lighting in the house is off if I want to listen to the radio.

Thanks, please reply to vrollins@comcast.net as well as the group.

I'm sorry, but if the neutral broke then there could be no return current
for the single phase legs. Power would go out at the house.

Only if all the devices are one a single phase.

With an open neutral there is still 240 volts available at the
structure. If the load on each phase is relatively balanced, the error
may go unnoticed. If an alternate ground path exists for the neutral
things may appear normal until it fails. The current in the neutral can
be much lower than either of the phases.

Sorry but that is not true.
15 years ago the neutral failed at the transformer and our aAC was
cycling
up dan down smoething wierd. My low voltage alarm tripped, and woke us
up. I killed the breakers and called the utility.

The other 3 homes had damge to their refridgerator and heat pump
compressors. Motors don't like AC that runs from near 0 to well over
normal.

I design switching power supplies and related power supplies like lamp ballasts. In short the answer to your question is NO! We use filters per FCC requirements but it ain't enough! I've gotten rid of all the inverter type lamps in the house here. I use filament lamps and am helping the Saudi's fill the pockets with American dough!

Yep.

> unnoticed.

First, how likely is that?

Secondly, I still don't get how the current on the one phase makes a return
path if the neutral is disconnected.

I know it's AC, but what's being described is like disconnecting one of the
leads to a battery. Maybe somebody can better describe the term 'broken
neutral wire'.

> If an alternate ground path exists for the neutral things may appear
> normal until it fails.

What alternate path? The wire is broken supposedly so there can never be a
return path.

> The current in the neutral can be much lower than either of the phases.

How do you reconcile that with Kirchoff's laws?

Remember the CB craze of the 1970s? It became insanely popular for a while with a very wide audience, but then the sunspot cycle created horrible conditions, and the faddists went somewhere else. The CB survived, though, and even in these days of GPS and satellite and internet, there's still nothing better for truckers and other interstate drivers than the old familiar CB. I listen to channel 19 all the time, and it's just as busy as ever before. CB is not about to go anywhere.

Neither is shortwave. I think shortwave is in a decline, but I think it will survive and even flourish over the next few decades. I don't know who will be on the SW band in 10 years, but I'm sure someone will be smart enough to realize what a powerful medium radio can be.

The 120V service in your house is between one of the hot legs of the line from the pole and ground. If you look inside your breaker panel, you'll see that the neutral from the pole, the white "neutrals" from all the branch circuits, and the bare copper or green-jacketed "ground" wires from the branches are all bonded together and to a grounding electrode driven in your yard somewhere. So, assuming there is still power at the hot legs of the service from the pole, there will still be 120V from either leg to ground. It'll just be the ground at the electrode in your yard rather than the ground at the transformer on the pole.

Still, if the neutral is broken at the transformer, you still don't have a
return path.

You have a lot of confidence in your position, so I think an experiment is in order, to verify the conclusion. First, go up the power pole and snip the neutral at the transformer. Then, go down in your basement, open up the main panel, put a finger on either one of the hot buses, and then grab a nearby copper or steel water pipe with your other hand. If we don't hear from you again, then we'll conclude that there can indeed be current without the neutral at the transformer. Otherwise, please report your findings.

All seriousness aside, if there's power on either of the hot legs, then you don't need a "return path." Even when it's connected properly, the neutral is grounded, anyway, so the "return path" is from hot to ground -- any old ground will work, and that's why it's a potentially dangerous situation.

Kirchoff would be intrigued by that.

If what you are trying to say is that the neutral wire was broken, but the
neutral to ground connection was still good, then I can get your point.
However, saying the neutral is broken is ambiguous.

I just don't get how that happens on the line. If the break is internal, as
it sounds, then there cannot be a properly grounded transformer.

FDR wrote:

Still, if the neutral is broken at the transformer, you still don't
have a
return path.

You really ned to talk to an alectrician. I just asked my electrician
friend
frind and he siad ti is all too common.
OK lets look at it another way.
We have a 240V CT transformer.
Wiht the CT being neultral/ground.
Here we have two wires going from our house to the pole,
that join at the pole witht he center tap.

We cut the CT open.
We now have 240V hitting the breaker box. The old neutral
will be somewhere between on side of the 240V and the other.
If the loads are balanced, then it is possible, but not real
likely that you could have 120V across each side, from either
side of the 240V to the centern.
I hope you will agree that 240 devices don't need a newtral return.
My water heater has the element, a big honking resistor from one
side of the 240V to the other.

Let's put 1 100 watt light bulb on each side of the 240 transformer
in series, with the junction being the house neutral.

Now even without connection to the pole center tap/neutral/ ground
we will ahve 120V across each bulb from common junction of the
bulbs to either side of the transformer.

My electrician friend says that around here, most transformer failures
are caused by severe imbalance between one side of the 240V split
and the other. Around here most transformers have 4 ot 8 homes.
If all of those homes have the same imbalance, "BOOM".
The transformer fails in a ball of fire.

Properly designed installations go to great lengths to match the
current
per leg or phase.

He hates the word phase because too many people confuse the
"2 phases" of the common house transformer with the "3 phases"
of commercial installs. In the typical house your have one transformer,
energised by a single primary and the side of the 240CT are 180

degrees out. In real 3 phase, the phases are 120 degrees out.

Draw a diagram of your pole to house circuit.
Showing the ~12KV(varies by area) primary, a 240CT transformer,
witht eh CT being ground or neutral or both, with the 3 (or 4) wires
coming nto your breaker panel. The CT/Neutral/ground forces
the sides to be 120 with refference to the CT. Without the CT, then
the common, broken neutral, will follow ohms law and form a simple
resitive divider. Motoros and non constant loads make it anything
but simple, but just visualise each breaker feeding a differnt
value resistor. Solve each side for parallel value, place the larger
resistance over the lowest and multiply that percentage by the
incoming 240V. It almost certainly won't be 120V. And when a
motor turns on, it really screws things up. The motor can't draw
enough current to get up speed, so it thermals out, and removes
it's self from the circuit. Assume that after some arbitary period
of time every thermal controlled device, fridges, heat pumps, furnace
blowers, are all trying to start and the resulting voltage swings
become very complex.

This is a good way to ruin motors, blow bulbs and is a "real bad
thing."
And it happens.

Actually, three, including neutral. Maybe you are saying it a different
way.

I agree with that.

I see where you are going with that.

I did the math and you are correct.

I remember years back, a company in NY was working on a replacement
bulb which would eliminate up to 80% of the QRM produced by such
lights. The only thing I have seen come out of anything are the
Philips "corkscrew" lights which are supposed to last 10 years. I
don't see any help from them.

Much as I like to have a low electric bill, sometimes, you just gotta
use the standard old table lamp with a standard bulb and turn
everything else off!

I finally did ID it guys! I had another excellent opening last night,
and it was R. Congonhas. It is the only signal I can hear there, so I
am betting that it was one and the same station, especially since it
came in at the same time and format.

Thanks a lot everyone for the info sounds like the DX-ULTRA might just be my best antenna. But the T2FD look great also I could put one up that is over 70 feet long without much trouble. At my location a sloper antenna would fit the yard best! But if I was to ever hit the lottery I would move out of town and put up one of those log periodic with a 100 foot boom and about 500 feet in the air!!!

Hi Terry

We get storms here off Miami but I haven't seen loads of lightning. They are
usually far off over the ocean.
I have seen a few bad nights but I just unplugged my outside antennas and

went with an indoor whip or loop.
No biggie. It's beautiful down here. Nice clean air, loads of water, girls..oh the girls.....There are always tradeoffs in life. But not living in paradise because of lightning doesn't make sense to me.

Lucky

Halogen lighting cannot be a source of interference. If you have a
problem then it is time to look at all the connections and make sure
they are tight. Absent some sort of electronic dimmer/electronic
control for these, there is no source of RF energy. The halogens may
also be radiating something that is coming in from another source on
the AC power...

1061. Towards better audio:! Help Pete and Frank(this is LONG!)

Newsgroup: rec.radio.shortwave
Date: 2005-06-10 00:23:44 UTC
From: r2000swler@hotmail.com
Message-ID: <1118363024.794730.245400@z14g2000cwz.googlegroups.com>
Source record: 24500

Ok I baised the Ge detector diodes in both of my R2000s.
They require very different amount of currents.
1 is best a 0.2mA, and the other needs 3.2mA.
The audio gets much cleaner, as measured on Spectra Plus,
a great program but it's licensing system is a real PITA!.
For prior unid FSK work I had modified my sound card to
allow direct access to one set of inputs.
No caps to add problems.

Anyway on my 500KHz master RF source, with a clean modulator
I measure >20% THD on any radio with a "diode" detector at
95% symetrical modulation. By forward biasing the diodes in
the R2000 I can knock that down to less then 5%.

Great, but it screws the AGC up big time.

When connected to an antenna and received the wildly changing
levels on HF the radio just "goes nuts", clearly this changes
AGC time constants.

OK, I am now going to plan 2. Years ago when I used a R392 I
was less then pleased with the CW/SSB/FSK reception. I had
gathered the stuff to build an outboard "detector module".
This was in the early 80's and I hadn't heard of, and don't
know if it was available, Kiwas MAP, or the Sherwood SE-3 out
board detectors. I didn't know about synch detectors, but I
wanted FM-N, AM, and GOOD CW/SSB reception. I looked at several
of the links suggested and founds some fairly simple "precision
diode detectors" that look like they will solve the AM.
I still have my BFO from that never finished project, and some
hwere Ihave my PLL FM detector. I never got around to builidng
it becaue I bought my first R2000 and it was "good enough".

I am convinced that one barrier to understanding weak AM signals
is the distortion caused by the simple AM detector, the sonic
"flavoring" produced poorly choosen capacitors and the crude
AF power IC. I tried tapping the signal straight from the detetor
with a Hi-z Jfet buffer and feeding a Class A headphone amp
I built with MOS-FETS. The sound was much cleaner and I could
understand a weaker signals I generated here with a MC power
divider in reverse. The Radio is connected to the common, the
antenna to 1/2 power port, (after my nuvister splitter to provide
a "true" 50 Ohm antenna) and my HiFer beacon, greatly attenuated,
into the other 1/2 power port. I used a local 24 hour talk radio
station as the modulation source. Now the HiFer beacon does not
have the best modulator. But I could reduce the output of the

HiFer beacon to a level about 4 or 5 dB below that which I could understand the conversation with the built in audio chain. I think the Rec out is as clear, but after messing with this for 5 hours I don't really trust my ears. My wife cna dig into the noise at least another 3dB. I rode a motorcycle for 25 years and have some hearing loss.

So my plan of attack has become:
Add a IF jfet buffer to both R2000s.
Build a better AM detector.
Complete my FM-N detector.
Use a MC1496L balanced modulator for the product detector.
Add a minimilist audio section with a "see-saw" tone control.
Build a simple 10watt low distortion MOS-FET power amp to drive speakers, or headphones.

Now can a MC1496 be used as a synch detector?

Any suggestions other then buying a "better" receiver?

I am dead bugging an improved AM detector tonight with video opamps. I may complete in time to post before I go to bed in three hours.

One of the reason why I am going after weaker and weaker signals is I have "caught all the easy stuff".

And this doesn't begin to address other local noise issues that a friend made me aware of.....

Terry

The precision rectifier seems like a pretty good idea.

This subject has gone around here a few times. Deja/google keywords as
Hi-Fi AM, Low distortion detector and such in rec.radio.shortwave and
rec.antiques.radio+phono.

Frank Dresser

I have given up on the shottky diode and forward bais, see my way to
long post on improving audio.

I am going with a precision rectifier built with 10MHz Video opamps.
I hve decided to leave the existing detection and audio chain in
place and add an IF buffer to feed an external detector "strip"

Terry

I had one of those. It only lasted me 16 years before it died. It spent
8 of those years as my garage radio. Good and durable.

It was made by National, and there were two independent sections (though
the intent was to use them together.

The first section was an amplifier stage, with a gain control element.
The second section had some more gain, and then a double balanced mixer,
followed by an agc detector.

You'd feed the signal into the gain stage, then out through a filter of
some sort and into the second section where the signal would be detected.
Feed a BFO into the mixer, and you could receive SSB and CW. Set things
right, and that mixer would be used as an FM detector. Unbalanced the mixer,
and it's just a gain stage, and the AGC detector is used for AM reception.
Or feed the limited IF signal into the mixer, and it's a "quasi synchronous
detector" for AM.

A neat thing from the early seventies when ICs were still relatively new,
but I gather it had its limitations.

1071. DE31 Active Loop Antenna mini review. If you're one of the MANY Chinese made radio haters skip this!

Newsgroup: rec.radio.shortwave
Date: 2005-06-10 04:54:05 UTC
From: Jim Hackett <h-a-c-k-m-a-n@pcpeople.com>
Message-ID: <N19qe.2025$VK4.1587@newsread1.news.atl.earthlink.net>
Source record: 24510

Ok, here's my 15 minute mini review.
First off:
It's 5:00 P.M. here where I live less than a mile from a 50kw blowtorch.
Even though 1170 is EVERYWHERE at this time, I can null it out by rotating the loop (provided there is a signal) With no OTHER signal, I can NOT null out the blowtorch completely.

The AN-LP1 is noticeably better (stronger/quieter signal) The tuning knob is fairly touchy and has no markings of any kind but it's not that hard to tune it by ear.
It (DE31) is definately better than the 1103 is off the whip.
The 1103 on the wind-up reel antenna is close in performance to the DE31 but doesn't have the ability to null out the flames from down the street.
So, given my excitement and hope for what this loop could have been, am I disappointed in it's performance?
Not at all. Was it everything I hoped it would be?
Not at all.
Is it worth $16+shipping?
Most definately.
I live in Silicon Valley, one of the noisiest areas around. Not many signals make it through to me.
This is also the worst time of day for me to try this. I will try again later tonight when the noise dies and the signals start creeping in.

It works much better on the Sat800 than it does on the 1103, I believe mostly due to the fact that the 800 is a much better radio! The 800 is not as "noisy" as the 1103, to begin with. I get a slightly lower but steadier s-meter reading with the 31 vs. my 65ft random wire. The 31 is noticeably quieter than the wire. I tried it on the high and low impedance connectors with little difference. Seems to be slightly better in the 50ohm connector but I just pushed a screw into the center conductor and clamped to it with the supplied clip.

Don't think I mention this but other than the fact that it doesn't work as well as the $100 Sony, the cords are LONGER which I like.
I can't handle the fact that the LP1 box is only about 6 inches from the radio. Too clumsy. The cord on the 31 is about 18" long, almost 3 feet with the clip adaptor plugged in. The cord going to the loop is about 3 feet longer than the Sony, also.

Where the Sony has set switch positions for different Mhz, the 31 is infinately adjustable making for more precise tuning. I think I mentioned that it is VERY touchy, though. And the whole mess fits easily into the cloth bag that came with the 1103.

You might think about adding something like a 6:1 or 10:1 Jackson Ball
Drive to the tuning knob to make it easier to tweak.

The problem is the dimmer in the halogen lamp. To verify, turn the light
all the way up in brightness and see if the interference goes away.

It would be cheaper to purchase a new light than to design and construct
a filter that would totally eliminate the cross-ovber harmonics from the
dimmer.

1074. WBCQ ?

I've been a ham for over 30 years but a real newbie to SW. I've been listening at times to WBCQ (7.415) and am curious if this is just a SW station that rents airtime to various people to express their views or just what. From what little I listened this week I heard everything from the coming one world government to Warren Buffet manipulating the stock market.

TIA .... Gary

Why don't you just post a numbered list of your ten lame
responses so you can refer to them by number instead of doing all that
typing?

Or are you bucking to be Cuhulin's replacement?

Funny, very funny.
He took the next day off, and we went to the local radio/tv
parts house and bought 100' of "antenna wire" with "dog
bone" insulators. The only other time I can remember him
taking off was for the birth of my sister.

Visiting our friend who has just received her Astronomy PHD was
educational.
Here thesis was on HF radio astronomy. She used a large dairy farm she
inheirited and sold off most of the pysical asssets to pay for school.
She ended up making most her money by selling he sod.

She did her work on the lower HF (13.36 - 13.41 MHz) allocation.
RA is a study in weak signals. She had a RC test transmiter on the
ISM 13MH that she used to generate "known" far field reference
signals. The two frequencies are so close that her RA antenna
received teh ISM perfectly. She was unaware of HiFer operations
and was releived because she had received several "odd" signals
over the last 4 years and couldn't determinie what they where.

Back the the noise part. While "Ground loops" may be an issue with RF
devices they are a killer issue with weak signal audio issues. Ms. C
found that she had to use isoation transformers on ALL of the audio
lines.

This means the AF from the reciver to the USB Ardvark "sound card".
>From the audio out of the PC to a HP analyser etc. She found that she
even had to use a 1:1 RF transformer and NOT carry the braid from the
antenna to the R390. By using jumpers she showed me the jump in the
the auido noise floor.

Whne we got home, the first thing Idid was to install a bunch of
"ground isolation" transformers in all of my audio circuits. A PITA.
I simplified by only hooking up one R2000 and one audio chain. No
DSP no filters but even so it took 4 stereo or 8 transformers
to isoalte all of my audio "grounds". The only loops where now
casued by the power/safety grounds and the coax braid. I added
a MC 1:1 .1~400MHz transformer leaving only the power and safety
ground. I then made a special power cable that only ran the +12.

Whne I started jumpering to restor the wiring to what I had, the
noise in my PC audio FFT water fall went up with EVERY ground loop
I created. The "ground isolation" units I used wehere crude automotive
sound system transformers. Ms C used Jensen 10K:10K with internal
interwindind shield. I have a bunch of Byer transformers that are
similar.
I started added the Byers and as I grounded the interwinding shields,
the noise dropped again. I also found out that as Ms C said, "HiFi
cables
are junk", they most often use spiral wrapped cooper wire and are not
braided.
After much experimentation Ms C found that RG174 made very good audio

cables.
The 75 ohm version of mini coax workd just as well.

Now for most SWL activities this extreme level of isolation isn't likely to
be productive, or at least not worth the money. But if, like me, you are
interested in weak signal "oddities" it might be worth the effort. Only
time will tell.

In the near future I will share the results of some experimnets made
on triax and twin ax feedlines to eliminate the vertical noise "picker
upper" of the Doty antenna. In my location the 20' vertical run picks
up over half of my QRM.

Interesting. What did she hear radio astronomy wise?

Here I have my matching transformers mounted at the 9' level where the antenna
is and have never used the 'Doty' method with the vertical component.

Not trying to be silly, but "noise".
She was looking for "non random" noise.
After capture and when broken down by
a fancy math program that I never could
understand, she got, as a younger cousin
said, "pretty graphs".

No kidding, she was lookng for spefic
"singal" and spen 4 years bulding a data
set to demonstrate them. In a lot of ways
she was going to extreme lengths to capture
what I am trying to get rid of.

Pretty damn funny.

She was look at several nearby by stars for
ceratin radio emissions. Ms C isn't crazy,
but after listening to all that nosie for 4 years
she is a little, shall we say, odd.

To me a static crackle is a static crackle.

I tried to mount the 9":1 up in the air but even with
many ferrite beads on the coax down run, I had issues.

By using triax or twin ax, I got rid of a lot of man made noise.
I had the 9:1 one at the top of the support, 20' up a chinese
elm tree, coneected teh input (hi-z) hot to the antenna wire, the
OUTER briad to the low side, the inner braid triax, , or one side
of twinax to one side of the low-z winding to the inner conductor
of the triax, or the other side of the twin ax and at the bottom,
grounded the outer braid to an 8' ground rod.
I used a 1:1 transformer to connect the inner braid and center
conductor of triax, or two windings of twinax to connect to the coax
run to the house.

I did !NOT! carry the antenna ground to the home run coax braid.
I found that when I connected that ground tothe home run coax braid,
my noise floor jumped back up at least 10dB.

I did the initial work at a friend's farm who used to work for the RECC

and has three power poles spaced at 50' intervals with pullys at the
top.
It is a real nice place to do antenna experiments. There are slight but
uniportant diffrecnes betweenthe way triax and twinax worked.

Triax is commonlyused to carry remote TV camera video long
distances and is a inner coaxsial cabel, with another layer of PVC
and a outtter sheild that is electrically isolated. You typically only

ground one end. Twin ax is a coax with 2 center conductors and
was used to carry video as a balanced signal LONG (I helped intsall
one run that is 3 miles long) distances. Both cables come in 50 and
75 Ohm versions. I experimented with 50 and 75 Ohm version of both
and went with 50 ohms, but there was no tmeasurable difference.

75 ohm triax ought to be easy to get as most TV stations are swtiching
from triax and twinax to fibre optics. I have my old original Doty
antenna
in the back yard, and a new, temporary modified Doty with the 9:1 20'
up.

I hope to determine it there is a real difference over the next few
months.
That and solve AM detector issues, local noise issues and improve
my home grounding system. Ms C says it is "marginal".

Too bad I can't win the lottery...of course I would have to buy a
ticket first.

I'll have a listen- I monitored a lot last summer, then sort of got out of
the habit. I am using ARGO as a viewer- allows you to see/ID 4 or 5
simultaneous beacons- even when only 1 or perhaps 2 are actually audible.

Here's a web site with information on listening to signals from Jupiter.

<http://radiojove.gsfc.nasa.gov/>

They also have data from Jupiter and the Sun.

E-mail me directly, and I can send you a schematic of an AD607 based sync detector. If I were going to go the Gilbert cell route, I would use an NE602 as a sync detector. The main thing with that design is to get a precise 90 degree phase shift for the LO input.
With the 607 Quadrature demodulator, all of the "hard work" has already been done.
As far as an AM detector, I have been using a Philips TDA1572 for several years. The measured distortion from antenna input to speaker output is less than 0.5%. This is when using an LM386 as an audio amplifier. Audio performance is similar to my Lowe receivers.

Yes and no. Dimmers were certainly the 'taditional' problem -- but there are
now a whole raft of new low voltage halogens that get their reduced voltage not
from a normal iron-core transformer, but from a cheap non-filtered switching
power supply [no dimmer involved at all]. These switching supplies have all
but replaced traditional transformers on the shelves of the chain stores. They
cause so much hash on the power lines that line-based remote control systems
[like X-10] won't even work if even one of these is turned on on that branch.
There are specific filter solutions for specific frequencies [again, like those
used by X-10], but they only block noise at the specific X-10 carrier frequency,
and do little for the rest of the band -- or for the direct radiated noise from
these plastic boxed 'jammers'. One wonders how these are even legal...

> It would be cheaper to purchase a new light than to design and construct
> a filter that would totally eliminate the cross-ovber harmonics from the
> dimmer.

If the problem is from a switching supply, the only way to avoid the problem is
to either turn it off, or replace the supply with an iron core transformer
[while they are still available...]

Intersting post for more than one reason. The YL you mention sounds like she was seeking either (a) extraterrestrial life signals or (b) signals from unusual, sporadic or random episodes, such as supernovae or gamma ray bursters. Both are radioastronomy of a sort, but the latter is more likely to achieve positive results than the former.

To my mind, gamma ray bursters are the most amazing and somewhat frightening phenomena out there - the energy unleashed by one of these events is incomprehensible.

That's about the only thing that worked for me :(We have them in the kitchen
and if I am listeming to the radio, I can tell at once when someone goes in
there and turns on the halogen lights. Fortunatelt there are other light
sources there as well so they don't have to work in the dark :)

I am amazed at all of these military experts or veterans here !!! How many prior US service excepting USAF??? Any one here in charge of a naval squadron or specops detachment? As I thought...arm chair generals with unsubstantiated data and old militart or political paradigms. Well I was there for 26 years, stayed on top of enlisted and officer ranks before retiring, and now working in the Middle East.

To be polite, a lot of you are full of ...well. you need to check out facts before quoting so-and-so professing to be experts too.

First, what missile is it the Chinese or Russians have that can pierce our carrier defense systems? Please educate me...we can park here in the arm pit of the Carribbean while waging war with the USAF, they never find us as our planes hit their bases or runways at 4:30. So the Russians or Chinese are better, and have better sensor technology??? Excuse me, but you are really full of anti-matter. The only way the Chinese got a step ahead is after Clinton gave them some computer technology, as if a little was not enough to develop their own weapons design labs along our lines with now high-speed machines to perform simulations and studies.

Second, the OBL and CIA training scenario...let's give it a break...anyone remember who created Israel? Put it before the UN? Recognized it first? Or had an arms embargo against Israel until 1967 when the Middle East turned towards the USSR? Well, only the last item was the USA...the rest were UK, UK, and the USSR....hmmmm.seems to me that the USA has a beef with the Arab world. And if OBL thought he could push Sadaam out of Kuwait...well, he was smoking that dope the Taliban was selling to the west, especially the USA to raise monies for

arms and their little revolution and local horro chamber called Afghanistan.

Let's get one thing straight....the liberals are always flapping their gums over who did what first...well too late brain trust...the here and now is the main issue. With our low birth rate, our lack of family, the low interest in bust ass degress as engineering or any other science, we are doing ourself in without the help of any one or foreign politics. Add CEOs raping the USA as well as the world, and I'd say globalization will be the next world war catalyst. Unless we get off of our butts and vote the right people into office (other than history, international affairs, lawyers, or political science majors), put a 2 term limit on our representatives, and force them to leave social security alone, enforce budget discipline, and stop siding with these socialist lobby groups who want everything safe for them and their children at the expense of our individual freedoms (it doesn't take a village, Hillary), America will collapse from her own political follies.

Get the guns out of school, beat little Johnny or Sally when they fail, or don't listen, quit using abuse programs as the means to control everything about the American family and way-of-life, and quit giving scholarships for degrees that will contribute nothing to our professional shortages, or country's future. And the big one, get the Americans out to vote (Iraq had a bigger turnout than our last election-how sad; perhaps we deserve their situation more than we deserve America).

If any of you boys have a skill worth selling, or can hack a soldier's life, come on over here and see, read, and visit the Middle East for yourself. Cut the suppositions, and wild hypothesises, and most of all, kill this silly wish that everyone in the world is and will be our friend. No one has put a value on an individual's right to freedom as America has, or would fight and die to protect another's right to life. And all of these barbaric acts are perpetrated by who...the Christians...the Buddists...the who ever...cut bait and point the lon end of the Big Stick at the root cause of the world's terrorist woes...Islam......it is true that the culture and peoples are not at fault...but when they have no voice, have nor choise, have no one to tell them about the outside world...all of they have is religious zealots feeding them lies about a better world in the hereafter in exchange for subsidies from ridiculously rich dictators, royal families, and self-proclaimed messengers of the Prophet, peace be upon him.

Maybe it is time for thr real believers to act on their talk, and take a stand against world wide oppression...but look into Chad, Sudan, Iraq, ...talk is cheap...and so a minority of Americans must act on behalf of the rest of the cowardly citizens back home, as before and in the future. If you are waiting for the enemy to arrive at your gates, wait no more.

So what is the point....the world wants peace....the USA is the bad guy...or is it that we have something that others loathe, despise, or crave. I've been in too many military cemetaries, buried too many buddies to listen and read anymore nonsense from you professed experts. If I had a wish, I'd love to drop you in the alien culture here, and see what your belief system would earn you....try death.

SO do you think you could at least get out there and be responsible voters in return for the sacrifice a few brave soldiers are making for you and yours? Probably not...as a fact...once a coward...always a coward...talk the talk, but you can't just walk the talk.

Can't say I have.

I've mostly experimented with listening to Jupiter.

The most effective antenna I've seen for this sort of thing is Yagi that
can be aimed anywhere in the sky using ropes. It's not much to look at,
but it works quite well. It was made by a friend, and is installed at
an observatory in Bethany CT.

Yes, WBCQ sells cheap airtime. But so do a lot of other U.S.
shortwave stations. The difference is that WBCQ's clientele isn't 99%
religious. All the other surviving private stations were founded for
religious purposes and that's what they mainly do. WBCQ was founded
by the biggest pirate on the east coast -- in fact, exactly how he got
a license has never been explained as far as I know.

"CycleOpps" <cycleoppsx@xcomcast.net> wrote in
news:S_-dnVXE3JeU5jXfRVn-rQ@comcast.com:

My 2 cents on lighting and shortwave radios. I am an advocate of fluorescent lighting, using the spiral type for desktop lamps whenever possible. I also use this type of lamp in one of my ceiling fans that has 3 separate light sockets. When I first installed the fluorescent lamps in the ceiling fan, I had a ton of interference with my shortwave radio. I had resigned myself to the belief that I was not going to be able to use the fluorescent lights in this application. I set about changing the bulbs back to incandescent, changing one at a time. The shortwave radio was audible in the background and I heard the noise go away after I had replaced just 1 of the 3 fluorescent lamps. A little experimenting and I discovered that the incandescent lamp was somehow dampening the noise from the fluorescent lamps. To this day I still have 2 fluorescent bulbs and 1 incandescent bulb in this fan. It doesn't look the greatest but it still saves energy.

I have many other fluorescent lamps in the house, yet none seem to be an interference problem.

Of your dilemma, one of the communication magazines recently covered this same issue. Sherlock Holmes of Amateur Radio had his hands full with this one. The issue shows a bulb with an apparently intact filament, yet a check with a DVM showed the bulb to be open. Turns out that the bulb had a microscopic opening in the filament, was open to the DVM, yet conducted when voltage was supplied to it by the fixture and apparently even lit. Problem is that it generated a ton of interference on AM. When the individual finally discovered this and replaced the bulb, the interference went away.

Bulb, contacts, switch, etc. Look for loose connections, perhaps if done with respect for safety, do it with the lamp powered, gently manipulating the switch, bulb (usually very hot), etc. Do this while listening to the interference on your radio and look for a change in interference.

Regards,

Dr. Artaud

In the US of A shortwave broadcasters are people with a mission of some sort or owners who sell block time to such people. I don't see that changing very much.

Even some people with a mission have dropped out. An example is the Christian Scientists.

1120. VOA to Resume Radio Broadcasts to Uzbekistan

Newsgroup: rec.radio.shortwave
Date: 2005-06-11 05:13:15 UTC
From: Mike Terry <miketerry73@btinternet.com>
Message-ID: <3gva76FedjmjU1@individual.net>
Source record: 24659

Press Release
Washington, D.C.,
June 10, 2005

The Voice of America will resume its radio broadcasts to the Central Asian nation of Uzbekistan on June 12. VOA had ceased broadcasting on radio to Uzbekistan last year in response to research that showed Uzbeks watch television in significant numbers. VOA has been broadcasting television programming to Uzbekistan since December 2003.

"Because of the recent events in Uzbekistan and the Uzbek government's tightening of controls on foreign television broadcasts, we have decided to resume our radio broadcasts," said VOA Director David Jackson. "The Uzbek people deserve to have access to uncensored news and information about what's happening in their own country, their region, and the world. In addition, our Uzbek language web site will continue to be updated with the latest news and information."

VOA's Uzbek-language radio broadcasts will consist of a daily (seven days a week), 30-minute program, airing from 15:00-15:30 UTC (20:00 -20:30 local time) on the following shortwave frequencies:

SW Frequencies 1500-1530 UTC:
11515 IRA (26.05 meters)
11780 UDO (25.47 meters)
15390 KAV (19.49 meters)

VOA hopes to offer the new Uzbek-language radio broadcasts on medium wave and FM in the future.

VOA's coverage will focus on the news of the world, of Uzbekistan and Central Asia, and information about U.S. policy and opinion. The coverage will also include U.S. and world press reviews on Uzbekistan, as well as interviews with regional and international experts on Uzbekistan and the region.

The Voice of America, which first went on the air in 1942, is a multimedia international broadcasting service funded by the U.S. government through the Broadcasting Board of Governors. VOA broadcasts more than 1,000 hours of news, information, educational, and cultural programming every week to an estimated worldwide audience of more than 100 million people. Programs are produced in 44 languages, including English.

For more information, call the Office of Public Affairs at (202) 401-7000, or E-Mail publicaffairs@voa.gov.

> I wonder if the VOA will restart the Arabic service?

Not necessary as the psyops division of the US Army
is already broadcasting our pro-USA propaganda
from Iraq to much of the Middle East from Iraq, Turkey
and Afghanistan. Of course the Arabs know it's all bullshi+
but you know those congressmen 'back home' want
this crap to go out on the medium wave airwaves to the
indigenous populations.

They make no effort to hide themselves, which of course
when the target audience knows who is behind the
broadcasts, then automatically assumes everything they
say to be bullshi+. This is an excellent example of the Pentagon
better known as 'Fort Fumble' (as in fumble the football) in
action with a completely wasted effort.

See: http://www.psywarrior.com/psyop.html

I've been to the ME Region and can assure you
from actual observation that 98% of the population
get's it's info from either Al Jazeera or Al Arabia.
Shortwave is no longer the viable medium as it once
was. In the backcountry they can get AlJazeera
Radio via Satellite which is in almost every private car
and has replaced shortwave in almost every case.

You'd have to want it pretty badly. His handy-dandy shipping calculator
tells me that shipping is $191.90 to me in northern Alabama. To a
California address (where he is), it's still almost $100.

(The thing only weighs 48 lbs.)

Source record: 24670

Why to buy a DE1107: First, because you can never have too many radios. Second, this is touted as an analog radio with the DE1103s performance. Third, this might end up being your favorite portable radio, but you'll never know it unless you get one. If I had a few extra dollars, I would have already ordered one of these.

When the Tecsun PL-350 first showed up on Liypn's ebay store, I figured that I'd go ahead and order one, but I really didn't have a whole lot of expectations for it. I had previously owned a PL-550 and I ended up giving it away, so I figured that something even smaller wouldn't be worth a whole lot. Still, I figured I see if Tecsun somehow got it right this time.

Sure enough, the radio became not just a keeper, but it remains my #1 radio to this day. That says a lot, because I've had more than 30 portable radios in the past five years, and all of them have at least one flaw (too big, too small, too hard to use in the dark, too wasteful on batteries with no built-in charger, etc.). When it all comes down to my specific tastes in all of the portable radios that I own, #1 for me is the PL-350 (excellent performer, excellent ergonomics), #2 is the DE1103 (excellent performer, lousy ergonomics), and #3 is the Yaesu VR-120 (excellent range of frequencies, lousy ergonomics). Everything else is simply gathering dust on my shelf.

Yeah, the Arabs use satellite radio and TV moreso than any population on earth except Americans, it seems. And in America most sattelite radio and TV is through big corporations (XM and Sirius for radio, DirecTV and Dish Network for TV) while the Arabs use regular dishes, you know the old fashioned "Big Ugly Dish" kind as US enthusiasts call them that have almost completely disappeared in the US. The only place in the ME that SW still makes sense is in Iran, where satellite usage is either heavily regulated or outlawed and the US uses SW to broadcast Radio Farda into the country. But yeah, once the Arabs learn that Al Houri satellite, or Radio Sawa FM, is run by the Americans, they stop tuning in.

No, unfortunately no one can stop the storm. However, reports from various individuals in the affected area are quite beneficial and help the National Weather Service track the storm.

It be certainly understood why they'd want to broadcast there. Two issues: the present despotic dictator situation, and the support the USA has had for the regime. Things may go the way of gov't overthrow and there is a need to be able to claim credibility with whatever side wins: the dictator or the opposition. The real problem is the opposition has become very extreme as the gov't has targetted everyone not with them. Maybe we'll see a newly promoted opposition clandestinely funded? As long as they can export oil I s'pose.

The ghost of Ronald Reagan is haunting somewhere in here. While Oliver North is on TV doing travelogues, Gordon Liddy tells us that the deep throat guy is immoral, Chuck Colson preaches to convicts and Jim Bakker again pretends he's a good guy on late night TV.

I never reply to OT threads but I will make an exception here.

In many respects, I think the state of this NG reflects the state of the hobby. I would assume that if the DXing hobby was thriving to any degree, there would be a plethora of posts reflecting this. However, a majority of the topics here are OT crap. I am also willing to bet that the attrition rate of regular posters in this NG is rather high, and I don't blame them. I also don't blame people who just stumble upon this group looking for shortwave Info. to spend five minutes reading the posts and then leave, never to return. I lurk rather than post and run the risk of being plonked, being called a 'tard. or told to take my meds, put on my tin foil hat, or tote, etc... I am astounded at the time and energy that people invest in this NG to arguing with each other. What an utter and complete waste of one's life. I once heard somebody say that, "Arguing on the internet is like playing with your balls. It feels good at the time, but nobody really cares." I think that is an accurate, if not profane, way to get the point across.

Flame away.

In Thunderbird, you can mark a thread as read, all current and future messages are then not highlighted. From the toolbar Message->Ignore Thread. You can then select to only see unread messages. From the toolbar View->Messages->Unread.

You can also eliminate posts from specific senders. From the toolbar select Message->Create Filter From Message. This won't get rid of existing posts but eliminates future posts until the sender changes his address.

I really like this forum and the shortwave and radio
> modification content, lightning protection, etc. Things related to radio.

Among other things, the British government document quotes a high-ranking British official as stating that by July, 2002, Bush had made up his mind to take military action. Yet, a month later, you stated you were still willing to "look at all options" and that there was "no timetable" for war. Secretary of Defense, Donald Rumsfeld, flatly stated that "[t]he president has made no such determination that we should go to war with Iraq."

In addition, the origins of the false contention that Iraq had weapons of mass destruction remain a serious and lingering question about the lead up to the war. There is an ongoing debate about whether this was the result of a "massive intelligence failure," in other words a mistake, or the result of intentional and deliberate manipulation of intelligence to justify the case for war. The memo appears to resolve that debate as well, quoting the head of British intelligence as indicating that in the United States "the intelligence and facts were being fixed around the policy."

As a result of these concerns, we would ask that you respond to the following questions:
1)Do you or anyone in your administration dispute the accuracy of the leaked document?
2) Were arrangements being made, including the recruitment of allies, before you sought Congressional authorization to go to war? Did you or anyone in your Administration obtain Britain's commitment to invade prior to this time?
3) Was there an effort to create an ultimatum about weapons inspectors in order to help with the justification for the war as the minutes indicate?
4) At what point in time did you and Prime Minister Blair first agree it was necessary to invade Iraq?
5) Was there a coordinated effort with the U.S. intelligence community and/or British officials to "fix" the intelligence and facts around the policy as the leaked document states?

They can't be Terrorists if Your negotiating with them . Eh Bush toadies?

Time Magazine: George "I Won't Negotiate With Terrorists"

US in talks with Iraqi insurgents
http://www.guardian.co.uk/Iraq/Story/0,2763,1503477,00.html
Rory Carroll in Baghdad
Friday June 10, 2005
The Guardian

American diplomats and army commanders have held indirect talks with insurgents in Iraq, the first officially sanctioned contact between the two sides in two years of violence.
A US embassy official in Baghdad said efforts were under way to "engage" elements of the resistance in an apparent softening of the Bush administration's opposition to negotiations.

"In order to achieve stability and [an] end to the insurgency and stop Iraqis from being killed in large numbers, the insurgency has to be addressed," the official told reporters.

"I don't think the people we are sitting in the room with are directly operational, but they have relationships with them, sometimes through family ties, sometimes through previous associations with the previous regime."

The briefing was on the record but under embassy rules the official could not be named.

He did not elaborate on the substance of the talks and it was unclear which of the insurgency's numerous groups had been engaged.

The contacts, conducted mainly through Sunni Arab tribal and religious leaders, were limited to factions which could be coaxed away from violence and into mainstream politics, the official added.

That ruled out Abu Musab al-Zarqawi's al-Qaida in Iraq and other radical Islamic groups believed responsible for most of the suicide bombings. "Some insurgents are irredeemable and have to be dealt with in a purely military way."

The US has made public overtures to Iraq's Sunni Arabs, a disaffected minority driving the insurgency, but until now drew the line at contacts with the "terrorists" denounced by President Bush.

The administration has come under increasing pressure to show progress in a war which claims approximately two American lives daily and is blamed for shortfalls in army recruitment.

A recent Gallup poll showed 57% of Americans do not believe it was worth invading in March 2003.

It is no secret that some US commanders on the ground have informal and indirect contacts with their opponents, mostly via Sunni mosques and tribal elders. The embassy official suggested those channels have become more formalised.

The insurgency is a complex mix of criminal gangs, Sunni Arab nationalists, former members of Saddam Hussein's Ba'ath regime and Islamic radicals, with many foreigners among the latter.

Two years ago Mr Bush's response was "Bring 'em on". But as casualties soared and the nascent Iraqi state reeled, the US reached out to the Ba'athists and Sunnis, encouraging, for example, the country's new Shia and Kurdish rulers to scale back purges known as "de-Ba'athification".

Earlier this week an Arab Sunni politician and former electricity minister, Ayham al-Samarie, said two groups, the Islamic Army in Iraq and the Army of Mujahideen, were ready to talk to the government.

The prime minister, Ibrahim al-Jaafari, said yesterday he hoped to draw "all sectors" of Iraqi society into the political process and hinted that this included homegrown insurgents.

The ruling Shia and Kurdish coalition promised to give Sunni Arabs a greater role in writing a new constitution by increasing their membership on the drafting committee, where they occupy two out of 55 seats.

Some officials said Sunnis would be given an additional 13 seats, matching Kurdish representation, but President Jalal Talabani, himself a Kurd, said the government would meet Sunni demands for an extra 20 to 25 seats.

The British foreign secretary, Jack Straw, visiting Baghdad as part of a European Union delegation, expressed confidence that Iraq would have a referendum-approved constitution and elections by the end of the year. The delegation also pledged financial support for Iraq.

'Good and honest' Iraqis fighting US forces
http://www.gulf-news.com/Articles/RegionNF.asp?ArticleID=168406
By Phil Sands, Staff Reporter

Tikrit:
A senior US military chief has admitted "good, honest" Iraqis are fighting American forces.

Major General Joseph Taluto said he could understand why some ordinary people would take up arms against the US military because "they're offended by our presence".

In an interview with Gulf News, he said: "If a good, honest person feels having all these Humvees driving on the road, having us moving people out of the way, having us patrol the streets, having car bombs going off, you can understand how they could [want to fight us]."

General Taluto, head of the US 42nd Infantry Division which covers key trouble spots, including Baquba and Samarra, also said some Iraqis not involved in fighting did support insurgents who avoided hurting civilians.

He said: "There is a sense of a good resistance, or an accepted resistance. They say 'okay, if you shoot a coalition soldier, that's okay, it's not a bad thing but you shouldn't kill other Iraqis.'"

However General Taluto insisted the US and other foreign forces would not be driven out of Iraq by violence. "If the goal is to have the coalition leave, attacking them isn't the way," he said. "The way to make it happen is to enter the political process cooperate and the coalition will be less aggressive and less visible and eventually it'll go away."

His comments come in stark contrast to the assertions of other top US figures, who persist in claiming all insurgents are either Baathists or Al Qaida terrorists.

General Taluto also admitted he did not know how many insurgents there were. "I stay away from numbers how can I quantify this? We can make estimates by doing some kind of guesswork," he said.

"I think there is a small core of foreign fighters. I don't know how big that is but there is some kind of capability here, and it's being replenished.

"Then there is a group of former regime personnel they're the facilitators. They make all the communications, move the money, they enable things to happen. Their goal isn't the same as the foreign fighters but they're using them to do what they want to do.

"Then we have the foot soldiers. Some are doing it for the money. Some are doing it because they're offended by our presence and believe we are a threat to their way of life. There are various levels."

He added: "Who knows how big these networks are, or how widespread? I know it's substantial enough to be a threat to the government and it will be for some time."

General Taluto said "99.9 per cent" of those captured fighting the US were Iraqis, but was also adamant most people in Iraq wanted a free, democratic and independent country.

He predicted attacks would continue to surge in intensity, as key milestones were reached, including the upcoming constitutional referendum.

This American General must Be with Saddam, according to Bush Bootlicker thinking.
He won't have a job for long.

Posters are in several categories.
-People who are into Dxing.
-People who listen to short wave for the content: program listeners.
-People who are looking for a place to debate stuff they've heard on SW.
-People who are looking for a soap box from which to debate stuff they've
heard on SW or crap they haven't.
-Trolls. Typically they post the same dumb lines or insults.
-The socially or mentally deviant or ill.

The last two I killfile. The third last is the hardest to deal with.

Actually I have. I've made comments particularly in response to the thread on lightning, posted my own website with the construction of my antenna system safeguards to help protect against lightning (I don't think one can prevent lightning). And I do read all the posts pertinent to shortwave and radio in general. I've been lurking about just a few short weeks so I'll get more involved with the radio topics.

The US on some level may be beginning to realize that it's not smart to completely hook their wagon to Karimov's horse. Unfortunately, it may be too late. Like you said, the opposition has become increasingly Islamicized (meaning extreme Wahhabi type Islam) and the population is increasingly seeing the US as the oppressor, not the liberator like in the old Soviet Union. These two things mean that any revolution in Uzbekistan probably won't turn out well for US interests. The revolutions in Georgia and Ukraine were very pro Western and pro US; in each case, it was Putin's favorite that got booted. Look at the reception Bush got in Tbilisi. But in Uzbekistan the revolution is very Islamic and very anti Western, fighting against a US backed despot; the situation is very much like Iran in the 70s. The situation could turn out the same way, with the mullahs in control and the US kicked out of its base. The US has a positive in that there's no Khomeini to rally the disaffected and spur them to revolution; all the Islamic leaders that have emerged have little of the Ayatollah's following or star power. But a leader like Khomeini could still emerge.

I personally only post OT when it's something I've heard on SW. Say what
you want about the BBC's agenda, they have some provocative news
stories, and I like to discuss them with people who have also heard the
program. I also would like to discuss stuff I've heard on Radio Havana,
but most of the people here automatically regard anything the Cubans say
about anything to be a total fabrication, so I've given up on that.
(Just a couple nights ago, they said that the Pentagon is now spending
ONE TRILLION DOLLARS A YEAR! 82% of all military spending on the
planet! They also said that the US media, especially the cable news
channels, is giving Bush a free ride, something I think we all suspect.
But I suppose they were lying, and that the Pentagon really doesn't

spend that much, and the US press is truly in it for truth, justice, and the American Way.) There are also posters (at least ONE poster) whose OT posts consist mostly of stuff plucked off the web, and not heard on SW at all. These should also be killfiled.

Get back to me when the "Africoons" burn down Beverly Hills or downtown LA, or when they hijack jumbo jets and fly them into skyscrapers. Other than that, burning down Compton and Inglewood may make for high TV ratings, but has virtually no effect on anybody except the locals. Most urban riots are contained within the immediate area-the 1992 riots stayed in South Central LA for the most part. Same thing with Watts in 1965. If you happen to be 400 miles north of the action like me, or happen to be somewhere in Wyoming, the closest you'll get to being in danger is watching it on TV. By the way, my local paper ran an article a couple days ago saying that most blacks see Michael Jackson as an Uncle Tom, a black man who forsaked his heritage, and thus aren't following the case closely. The rabid fans outside the courthouse are mostly white.

In this area, KFBK on 1530 khz drowns out KMPC, so I can't hear this.
Besides, I've got WWCR shortwave to listen to. :)

> -The socially or mentally deviant or ill.
>
> The last two I killfile. The third last is the hardest to deal with.

I would be number 2 on your list but also things not on your list.

1. I like to report not debate what I've heard on SW if it provokes a
reaction from me when I heard it. I'm not interested in an argument
about anything I've posted. If you disagree about some fact I've posted
I want to hear about it but what I think (opinion) is what I think. If
you don't agree with my opinion that is fine with me. I don't have an
expectation that everyone will agree with my take on things. That would
be silly.

2. I like to exchange ideas about antennas and reception of SW signals.

3. I like to read about the different aspects of the hobby that other people take up like utility signals or Dx'ing.

4. I like reports on the use of or exchange of information on radios.

5. Well, just about anything else that people do with the hobby such as modifying radios.

I figure that the majority of people that read the news group don't post due to being cowed by the Trolls and that is a shame. I encourage all reading this post to participate by posting here about SW and just kill file the waste of time Trolls.

Yes last night on the 5 or 6 MHz band they were very strong. I expect
that they were relayed by someone. The english broadcast was not very
long. Something like 15 or 30 minutes long. I did not note the frequency
as I was scanning the band, came across them and then listened for a
while. Their accent was pretty strong and hard for me to understand at
times.

I looked them up and believe the frequency was 5890 and it is relayed by
Delano at 03:00 to 03:30 UTC, which explains why it was so strong.

I think you must have heard the relay from Greenville @ 250KW from 00:30
to 01:00 UTC as a guess.

Some people are not mentally grounded. They can be brought to zero
potential by an addition to the kill file. Really!

I don't know if they need a focal head person to do the terror thing these
days. Just cells of people willing to die martyrs.

We've got the "great game" of the 19th century going again, this time the
players are Russia, USA, Islamic extremists. It scares me. Probably should
scare us all.

And the average person in countries like this really suffers.

The early "Microwave" diodes like the 1N21 are extremely sensitive to
static damage, and had a low breakdown voltage. They were shipped with
a thin piece of lead sheet wrapped around them to protect them. Some
Ohm meters will destroy the junction, so be careful.

The CBC in Canada has roughly the the same size window. It appears they spend a completely disproportionate amount of time with G_d's one and only Chosen. That is also quite noticeable in the nightly rebroadceasts of foreign public radio services. Cynics are saying that there's been a huge increase in the number of Jewish WWII survivors in the last few decades. Some of them even seem to have developed tattoos on their arms after the fact.

Sorry, no photos. I don't get there very often, and it's almost always
dark when I arrive. (Flash photos at an observatory are not a good idea)

In any case, the guy who put it up is the kind of guy you'd want with
you if you were on the program "Junkyard wars".

1191. Microsoft bans 'democracy' for China web users

Newsgroup: rec.radio.shortwave
Date: 2005-06-12 13:25:46 UTC
From: David <rickets@knac.com>
Message-ID: <1tdoa152fr2vlb114h7df4p8to93nnnf66@4ax.com>
Source record: 24878

Microsoft's new Chinese internet portal has banned the words "democracy" and "freedom" from parts of its website in an apparent effort to avoid offending Beijing's political censors.

Users of the joint-venture portal, formally launched last month, have been blocked from using a range of potentially sensitive words to label personal websites they create using its free online blog service, MSN Spaces.

Attempts to input words in Chinese such as "democracy" prompted an error message from the site: "This item contains forbidden speech. Please delete the forbidden speech from this item." Other phrases banned included the Chinese for "demonstration", "democratic movement" and "Taiwan independence".

It was possible to enter such words within blogs created using MSN Spaces, but the move to block them from the more visible section of the site highlights the willingness of some foreign internet companies to tailor their services to avoid upseting China's Communist government.

Beijing has long sought to limit political debate on the internet and is in the throes of a campaign to force anybody who operates a website to register with the central government.

MSN this year became the first big international internet service to win a licence to offer value-added telecoms services in China, a coup that was possible in part because of its decision to team up in a joint venture with Shanghai Alliance Investment (Sail). Sail is an investment arm of the Shanghai city government. Microsoft has also been careful to ensure that news and other content offered through the Chinese MSN portal are provided by local partners who can work within the informal and shifting boundaries set by China's unseen army of internet censors.

The MSN Spaces service, however, is directly operated by the joint venture, Shanghai MSN Network Communications Technology, in which Microsoft holds a 50 per cent stake.

MSN on Friday declined to comment directly on the ban on sensitive words, but its China joint venture said users of MSN Spaces were required to accept the service's code of conduct. "MSN abides by the laws and regulations of each country in which it operates," the joint venture said. The MSN Spaces code of conduct forbids the posting of content that "violates any local and national laws".

But while China's ruling Communist Party deals harshly with political dissenters, there is no Chinese law that bars the mere use of words such as democracy.

Hello Mike,
I think the Sony SW7600GR is a good knock around radio for the price. You can get them new as low as $130. It doesn't have a tuning knob but that's the only thing that's "missing" off it.

OK, you spend double what you wanted to, but you end up with a great radio with lots of features and built to last. Plus it's a Sony. Read the reviews on it. Everyone loves them. I don't think they are too fragile to be a knock around radio.

I found it on Amazon for $132.88 new. If you have good credit and qualify for Amazons Visa credit card, it's yours for $102.88 $30 off. But even if you don't qualify, for $132 you get a real radio. Or look for a good used one.

I have the kaito 1103.
I don't have another radio to compare to.
But, I absolutely enjoy the radio.
Gets so much SW on the built in antenna.
The vendor said it is comparable to many higher end radios.
Very happy I got this one indeed.

CorbinRay schrieb:

> Why to buy a DE1107: First, because you can never have too many radios.

The killer argument! :P Actually, one should stop buying them when there is no space for any additional ones left. ;) My radio drawer is essentially full now. (Besides, there's been a priority shift away from SW radios here. FM recordings accumulate to multiple GB a week, thus a hard drive upgrade became necessary, and since the stuff has to be backed up somewhere a few packs of DVD+/-Rs - good ones at that - have been needed as well. My second comp got two new used sound cards - the second one was too good a deal to pass up -, and now a PSU providing better ventilation would be good. Then I still need some audio cabling, I currently always have to plug and unplug things when changing from recording to playback on the PC.)

> Second, this is touted as an analog radio with the DE1103s performance.

Is it really? I'd rather expect something along the lines of an ICF-7601 or R-9700DX. The '7601 had been frustrating me in the long run, as it's just overloaded far too easily on shortwave; this is a built-in problem of the receiver concept with its very wide 1st IF. (An AE3405 is quite the opposite, it never overloads but is rather deaf and fairly hissy as well.) I found an ICF-SW30 to be quite a positive surprise - kind of a pain to tune but (being a "true" dual conversion rig) far less prone to overload while having good sensitivity. I wouldn't go below that level of performance any more in a SW set.

> Third, this might end up being your favorite portable radio, but you'll
> never know it unless you get one.

This kinda applies to my RF-B11, which has been my on-the-go FM radio for well over a month now (since mid-April). The AM ranges are nothing special (OK, better than on the DE105) but on FM it really shines. I should really check the batteries one of these days, they're still the same ones... 1.25 and 1.27 V. These alkalines were pretty much full when I put them in, now they must have seen at least 20-25 hours of use. Not too bad. Keeping the rx inside a plastic bag apparently was a good idea, not a scratch in sight (with daily use except on weekends).

Source record: 24800

Radio Australia has changed their schedule but this page still shows the old schedule.

<http://www.abc.net.au/ra/tuning/unitedstates.htm>
Overnight 19:00 - 04:00 12080 13630 15160 15515 17715 17795 21740

I take this to mean that they are on all of these frequencies during this time. This is has been wrong for months at least as they have been on 21,740 22:00 to 24:00 UTC and now it looks like 23:00 to 24:00 hours.

I went to their web site and down loaded their frequency schedule and only found one listing for 21,740 on page three that states 22:00 to 00:00 UTC.

Nuts! They faded out on 21,740 now and the Kp index is expected to go to
6 and NOAA of G2 storm!

<http://www.sec.noaa.gov/alerts/warnings_timeline.html>

It has been a good day until now!

Hiya, Lucky....

I already have the Sony 7600gr. To be honest, I wouldn't consider it to be
a "knock around" radio. It is my favorite portable by far, and I have tried
just about all of the well known sw portables including the YB-400 and the
ATS-909. I consider my 7600gr a prime travel radio to be well kept and
cared for. I also use it for at home listening through my PC speakers at
times over my R-75 because the 7600gr has a ssb selectable sync and can deal

with hets and QRM that the R-75 can not clean out in AM mode. I also have a GE-SR III that I used for MW, but I like that radio too much to use as a "knock around" radio.

I had in mind, buying an inexpensive MW, SW, FM, TV,Weather "multi" radio with decent AM sound quality. I want it to take out in the yard and listen to when I do yard work or wash the car and the like. Something that I wouldn't mind accidentally spraying with the hose, or dropping off of a ladder :-) I have one of those "Info-Mate" radios that you see on e-bay all the time, but I keep that inside to use as a "last ditch" radio if the power goes out and I dont have batteries left. That "Info-Mate has one of those hard cranks on it so, I'd hate to mess it up outside.

I'd consider any inexpensive portable with a decent size speaker that can get MW, FM and SW. TV and weather would be nice too.

New Zealand is a little noisy and has a rapidly fluctuating signal level
S3 to S6 but listen-able. Currently improving to less noisy and stable
at S6 on the RX340 with a vertical 40 foot loop antenna.

This time, the great game probably won't turn into Great War, at least
not between major powers. Nobody wants a nuclear catastrophe, except for
the Muslims, and they may be able to take out a city or two but not
bring civilization to a crashing halt like an all out nuclear war would.
Yes, in the great game the average guy is a pawn of the powers, and not
just in hellholes like Uzbekistan, but even in the major players. The
people with the power escape unscathed while the average guy gets hit
hard, from 9-11 to the killings in Uzbekistan.

> alone.
>

That's a little shortsighted. Yes, the future is dark and uncertain, but stuff still wears out and needs to be repaired or replaced. Cars break down, radios go bzzzt, houses need repairs. I recently bought a Sony radio controlled clock radio from C. Crane, at a total cost of $77 (including shipping and sales tax). My current set was rapidly losing time, it lost 15 seconds in two months, and it needed to be replaced. So I decided to splurge for something controlled by WWVB. And I had the money, so I went for it. I still think that the terrorists will win, but in the here and now my clock radio needed to be replaced, so I replaced it. Soon I'll probably need a new car, and I'll buy one, because my old one keeps breaking down. I'm most concerned about the people who end up homeless because they lost their job because their car broke down and they weren't making enough at Wal Mart to get it repaired.

New Zealand is S6 to S8 now good signal with no noise.

Australia was weak earlier on 17,715 and 17795 and now S3 to S6 and a
little noisy on 15,515.

We are still in G2 storm conditions.

1229. DXPEDITION REPORT: Grayland, WA, June 11-12

Newsgroup: rec.radio.shortwave
Date: 2005-06-13 03:07:45 UTC
From: Guy Atkins <dxNOSPAM@guyatkins.com>
Message-ID: <IdidnXsmZ8IdZTHfRVn-qw@comcast.com>
Source record: 24816

One thing you can count on with DXpeditions: there's always something memorable about each one! Although trans-Pacific mediumwave was an almost total bust, there seemed to be a propagational magnifying glass on Papua New Guinea this weekend on shortwave. This was very fortunate, as June 11 was the special inaugural broadcast and celebration of the new Wantok Radio Light station in Port Moresby.

Walt Salmaniw and I occupied the usual "DX Central" motel room at Grayland; we had guest appearances by John Bryant, staying at nearby Grayland Beach State Park with his wife on the first segment of a 10-day camping/mini DXpedition trip. The first night, Walt and I kept in touch with John via GMRS radio transceivers. On the second night of DXing we had the chance to try out John's new "Porta-KAZ" antenna alongside the Beverages. Although designed for mediumwave, the KAZ was a surprisingly good performer on shortwave, too. It is also a quiet antenna and fits within a small "footprint," suitable for most campsites.

The highlight of the trip for Walt and I was without a doubt the very impressive reception of 1 Kw Wantok Radio Light, 7120 kHz. At home, both Walt and I have had reception just above threshold levels. On the DXpedition we were treated to hours on end of impressive signal levels, which made for very enjoyable listening and recording for posterity.

On to the loggings, followed by a few trans-Pacific MW catches for amusement:

AUSTRALIA 2310, 1305-1312, VL8A Alice Springs Jun 11 Discussion of Australian politics by man and woman. Fair level. Parallel VL8T 2325 (fair) and VL8K 2485 (poor). On June 12, all three 120 meter band Aussies were much better, at 1044 UTC; persistent hum noted on VL8K transmitter. (Atkins-WA)

INDONESIA 3945, 1127-1130, RRI Ternate Jun 12 Soft Indonesian pop music to male announcer with ID at 1130. Only a fair signal, with modest modulation. Heard somewhat better on June 11. (Atkins-WA)

INDONESIA 4790, 1320-1333, RRI Fak Fak Jun 11 Strong signal of lagu romantik music; female announcer at 1330 with mentions of Fak Fak. Presumed. (Atkins-WA)

PAPUA NEW GUINEA 1737, 1143-1144, KUT, Kutubu Jun 12 CW aeronautical beacon KUT noted with slow Morse code; fair signal level. (Atkins-WA)

PAPUA NEW GUINEA 3220, 0938-0943, R. Morobe Jun 11 Tentative. Weak signal of man talking in Pidgin. Not much to go on, but other PNGs were in at very good levels during the same timeframe. Old country Gospel music at 0941.

(Atkins-WA)

PAPUA NEW GUINEA 3235, 1145-1201, R. West New Britain Jun 12 Man in Pidgin language with mentions of Kimbe and Papua New Guinea. Sing-sing PNG vocals to 1156 announcements. Still playing soft music past 1200. Fair signal at tune-in, but fading fast. (Atkins-WA)

PAPUA NEW GUINEA 3260, 0845-0901, R. Madang Jun 11 Male announcer in Pigin with mentions of 'Papua' at 0846. Bagpipe music (!) at 0850; ad for a brand of 'fine tuna' at 0857, and more bagpipe music 0858. 'Radio Madang' ID at 0900. Fair to good signal. Noted June 12 with weak, noisy signal at 1052. (Atkins-WA)

PAPUA NEW GUINEA 3275, 1050-1055, R. Southern Highlands Jun 12 Tentative. Noisy signal of what sounded like a live church service or transmission from an auditorium. English language preacher or speaker, but too weak of a signal to pull out much content. (Atkins-WA)

PAPUA NEW GUINEA 3290, 1056-, R. Central Jun 12 Central was not heard last night, but booming in this evening with a very good signal of EZL pop music and male announcer in English. Conch shell blowing, then Into NBC national news read by a man in English at 1100. Into a commentary program at 1105 by a male announcer: 'Welcome to another edition of Around the Provinces.' Noted parallel to NBC Port Moresby on their alternate frequency of 9675 (4890 absent). (Atkins-WA)

PAPUA NEW GUINEA 3325, 0944-0948, R. North Solomons Jun 11 Live or recorded broadcast of a female representative being sworn-in to a governmental assembly, and swearing allegiance to the country of Papua New Guinea. There were many mentions of Bougainville. The programming sounded like a PNG version of CSPAN. Fair to good signal. Also heard June 12 with a fair signal at 1058. (Atkins-WA)

PAPUA NEW GUINEA 3335, 0948-0959, R. East Sepik Jun 11 Nice Melanesian sing-sing music at tune-in; male announcer in Pidgin 0953 with time check and mentioning Papua New Guinea twice. ID for 'Radio East Sepik' at 0959. At 1003, the announcer mentioned 'Wantok Radio Light dedication' in the midst of a Pidgin sentence. Powerhouse signal!. (Atkins-WA)

PAPUA NEW GUINEA 3365, 1131-, R. Milne Bay Jun 12 Nice to hear Milne Bay again, as my last log of them was nearly one year ago. Very pleasant PNG vocals and accoustic guitar at tune-in. Man in Pidgin 1136 with mentions of upcoming programs, times, etc. Pacific islands flavored music 1139; weather forecast for Milne Bay 1140. Good signal level initially, but deteriorating by 1140. (Atkins-WA)

PAPUA NEW GUINEA 3385, 0910-0924, R. East New Britain Jun 11 Surprised to find on 3385 a relay of Australian rules football between the victorious Brisbane Broncos and the Canberra team. Noted parallel to the 120 meterband Aussie regionals. Suddenly back to local PNG programming at 0920 with ads for a hardware store and grocery. Mentions of the football game by a male announcer in Pidgin at 0922. Numerous mentions of Papua New Guinea at 0923. At 1320 recheck, noted on late with local advertisement and mentions of

Rabaul, and then off at 1323. Also heard June 12 with a strong signal of soft PNG pop music in Pidgin at 1112. (Atkins-WA)

PAPUA NEW GUINEA 3905, 0820-0836, Radio New Ireland Jun 11 Excellent level with female announcer in Pidgin; interesting primative music with women singing, accompanied by wooden percussive instruments. 'Radio New Ireland' ID by woman at 0831, and into local announcement or PSA by man and woman regarding the evils of marijuana. (Atkins-WA)

PAPUA NEW GUINEA 4960, 0904-0906, Catholic Radio Network, Vanimo Jun 11 Noted in passing with Catholic programming in English, 'Hail Mary full of grace,' etc. at tune-in. Much poorer signal than Wantok Radio Light...fair at best. However, at 1340 I happened upon CRN again, with a good signal of PNG choral music. At 1347, the female announcer congratulated Wantok Radio Light on their inaugural broadcast and official first day on the air. On June 12, CRN was heard with a poor signal of contemporary Christian music and female vocals at 1115. (Atkins-WA)

PAPUA NEW GUINEA 7120, 0520-1325, Wantok Radio Light Jun 11 A weak het first heard around 0520, and strengthening into threshold audio before 0600, over two hours before Port Moresby sunset. A steady rise in signal strength throughout the 0600 hour was noted, with good, listenable levels by 0630, with special inaugural broadcast of Wantok Radio Light in progress. Many mentions of 'Wantok Radio' by male and female announcers with references to the dedication of the station, and so on. This was clearly an outdoor event and broadcast, with a 'you are there' feeling, complete with echoes, microphone feedback squeals, crowds cheering, etc. Christian contemporary praise and worship music in between announcer comments, phone interviews, and messages by pastors and Christian leaders, and songs by local bands (Voice in the Wind; P.T.U.I.F. Band; and Higher Vision). Heard frequent comments like 'Papua New Guinea is praising today', 'Are you rejoicing, Papua New Guinea?' and mentions of thanksgiving for the new station. By 0715 the signal was positively loud! An exclamation of 'Good evening, Kaupena!' was heard at 0744, at the beginning of a listener's message and excited testimony (Kaupena is the transmitter location.) At 0902 recheck, I caught a quick ID in Pidgin rather than English: 'You hearim Wantok Radio Light'. This new PNG station was even coming in at a fair level on the whip antenna of my Degen DE1103...pretty impressive for 1 Kw on an NVIS antenna from over 6700 miles away. At 1325 recheck, noted Wantok Radio Light still in with a fair-good signal of contemporary Christian music. Here are two MP3 audio files of Wantok Radio Light:
http://www.guyatkins.com/files/Wantok_Radio_Light_7120_11June05_0738_inaugural_bcst.mp3 (outdoor inauguration celebration);

http://www.guyatkins.com/files/Wantok_Radio_Light_7120_11June05_1007_studio_ancr.mp3 (studio announcer after the event). (Atkins-WA)

PAPUA NEW GUINEA 9675, 1115-1122, NBC Port Moresby Jun 12 I almost didn't check this frequency, as 0700 is typical sign-off for 9675. However, after finding 4890 quiet, I noted 9675 with a good signal (far better in LSB) with the 'Around the Provinces' program, parallel to 3290 R. Central. Male and female reporters with news items from various PNG locations. (Atkins-WA)

SOLOMON ISLANDS 5019.9, 0750-0802, SIBC Jun 11 Bored-sounding announcer calling a soccer match between the Solomons Islands and Kenya, alternating between Pidgin and English. Caliope-like tune at 0801, and ID by woman, and into news in English. Very good to excellent signal. (Atkins-WA)

UNIDENTIFIED 3935, 0802-0806, Jun 11 Man in an English or Kiwi accent reading a list or story. Faint signal, barely above threshold level. ZLXA Levin, New Zealand?. (Atkins-WA)

VANUATU 3944.9v, 0715-0740, R. Vanuatu Jun 11 Noted this rising up from the noise prior to 0700, and down 0.1 kHz from nominal, just like Vanuatu on 7259.9v earlier in the evening before it shut down suddenly. Mentions of 'Tok Tok' at 0715 as well as Port Vila at 0731. Poor to fair signal, but improving past 0740. Noted again at 0814, drifted down to 3944.85. 'Radio Vanuatu' ID at 0815. (Atkins-WA)

MEDIUMWAVE (logged during VERY poor reception of trans-Pacific MW DX)

AUSTRALIA 792, 1239-, 4RN Brisbane Jun 11 Brief peaks of Aussie English to fair level, then down in the mud again. Finally caught a parallel of 738 2NR Grafton just before 1300; Radio National trumpet fanfare at top of hour, and into news. (Atkins-WA)

AUSTRALIA 1116, 1250-, 4BC Jun 12 Beautiful signal with local ads for an on-line casino, grocery store, and Ford Courier SUV at Brian Berg Ford ('A hard-working man needs a hard-working ute, at a drive-away price of $18,990'). ID as 'You're listening to more of the Weekend Shopper on 4BC Brisbane' and 'Talk 1116 Brisbane, 4BC' by male announcer. Excellent signal during peaks. A short MP3 recording can be heard here: http://www.guyatkins.com/files/4BC_Brisbane_1116_kHz_12Jun05.mp3 (Atkins-WA)

FIJI 639, 1203-1215, R. Fiji 1, Drasa Jun 12 Church service broadcast at tune-in, then South Pacific islands music. Fair to good level, and parallel to 684 Labasa. (Atkins-WA)

FIJI 684, 1208-1215, R. Fiji 1, Labasa Jun 12 South Pacific style of vocals and slack key guitar accompaniment; good signal level prior to fades, and parallel to 639 Drasa and possibly 1152 Rakiraki. (Atkins-WA)

NEW ZEALAND 1125, 1232-1240, R. Sport, Napier/Hawkes Bay Jun 12 Sports talk with two male announcers with US accented English, with typical relay of a USA sports network. Discussion about top NASCAR drivers. Fair, clear signal during peaks. Presumed. (Atkins-WA)

NEW ZEALAND 1332, 1220-1235, R. Sport, Auckland Jun 11 Noted with sports programming of two male announcers in Kiwi English, possibly parallel 558 Invercargill. Fair on peaks, but over/under presumed 4BU Bundaberg Australia with oldies hits. (Atkins-WA)

TAHITI 738, 1005-, RFO Tahiti Jun 12 Presumed. Woman with French talk; weak signal. One of the few TP stations with any audio at all on the band right now, during poor conditions. (Atkins-WA)

UNIDENTIFIED 1107, 1222-1227, Jun 12 Scraps of English with two male announcers, possibly Aussie accented. Very low level. (Atkins-WA)

Things are better now at the time of this post as we are back to G1
storm levels. New Zealand has a great signal on 15,720 and Australia
has a very good signal on 15,515 and 15,240. Australia is weak on
13,630 at the moment.

One thing you might consider. Go to a second hand store (or stores). You'll never know what you'll find.

'Bout ten years, or so, ago, went to a big thrift store in Vallejo. Found a Sony 7600-D (AM/FM/SW/LW). They wanted $10 as-is. I put in the correct batteries, and in store got both AM and FM. Outside, got WWV, BBC, RNZI, and a few others. It's been my knock about ever since (rides in my trunk). Has a tunable BFO as well. Only drawback, it tunes in 5 khz jumps on SW/LW. But the BFO tuning knob also works in AM mode and you can tune in between. Just don't *really* know the freq.

BTW, it was Sony's first digital readout SW set.

Just a thought......

Eric

1232. Need help finding a shortwave radio receiver for my grandpa

Newsgroup: rec.radio.shortwave
Date: 2005-06-13 11:34:46 UTC
From: ryan.cabanas@gmail.com

Source record: 24820

Hi. I know very little about shortwave radios, but my grandpa's shortwave radio receiver went out on him and he's wanting to get a new one. He doesn't have the Internet, so he wanted me to try and locate a store online where he could call and purchase a receiver with the following specifications and hopefully for the following price:

* Coverage: 100kHz to 30MHz (continuous)
* Single Side Band
* CW (Don't know what this means. Same as "continuous"?)
* RF Gain Control
* Desktop style
* Price: $350 or less

I did as much research as I could online to find models and brands (Grudig, Sangean, Sony), but it seems that a lot of articles and pages and posts speak of older receivers that were good, but are no longer made. Seems strange, but I guess that happens all the time with everything. Out with the "old", in with the "new". Right. Anyway, I hope that you guys (and girls) will be able to help me find a model that suits his needs. I really appreciate it. Thanks.

Ryan Cabanas

1236. Report and Pictures of Wantok Radio Light Inaugural Broadcast

Newsgroup: rec.radio.shortwave
Date: 2005-06-13 13:56:47 UTC
From: Guy Atkins <dxNOSPAM@guyatkins.com>
Message-ID: <lOGdnQoqVK4tDTDfRVn-og@comcast.com>
Source record: 24825

This morning I received the inaugural broadcast report from Joe Emert of Life Radio Ministries, with some photos of Wantok Radio Light's "big day" on the 11th. I've posted it at:

http://www.guyatkins.com/files/Journal_5.doc (MS Word file, approx. 355 Kb)

11,000-12,000 people attended this event; no wonder it sounded like quite a crowd out there while Walt and I were sitting with headphones on, eavesdropping on this live broadcast.

Mr. X story didn't make it through Google Beta.
But a few words of caution.
Helicopters, ether model or real world big
machines are a bear to fly. I have a friend
who is big nto RC. He got his ham license
solely for access to the additional RC
freqs. Prepare to spend some money
and time, and maybe even money for
training. Call around to your local model
stores, I am sure there is a local RC club.
Go to a meeting and ask around.

What you discribe is very "do-able, but"
it won't happen overnight.

Terry

From what I've read, if you have a permit valid in Florida, you can carry a handgun in WDW.

Would you rather have handguns under the control of law abiding citizens who have passed a background check, or unattended in the cars in the parking lot where someone who isn't law abiding might be able to find and steal them?

I agree. It just seemed like the long way around the barn just to measure
the sq. ft. of yards and what about foliage ,trees etc in the way of the
view to get accuracy? Weird!

Hiya... I dont know of any new out of the box desk tops for $350.00 and
under

Your lest espensive choices would be the Grundig Satellite 800 for about
$400 to $450. You can find it selling even lower then that at times. See
below.

http://www.universal-radio.com/catalog/portable/0800.html

And the Icom R-75 for about $500 to 550. This radio is discontinued from
Icom but you can still get it. I have one of these and I love it. See
below.

http://www.universal-radio.com/catalog/commrxvr/0175.html

If you want to spend less money, you'll need to buy a used radio.

Hope that helps !!!

Michael

Why not use a tape measure? GPS isn't as accurate as a tape measure
when measuring known boundaries.

Sounds like he might want to peep on a neighbor sunbathing in the
buff.......:-)

I notice he is still on 5070 in the early morning. (? 2-4 & 5-7 EST)
This would be because of a separate contract which is probably not
fulfilled. I thought from one of his comments that he might just let
someone else have that also. He seemed a bit ticked, though he denied
being upset about having to actually pay a bit closer to the going rate
or lose it to someone who would.

Incidentally, I think Pastor Peters picked up approximately half of his
time. Seems its 24 hours per day on Sat & Sun and also about 7 hours
per night (early morning) M-F. I think he implied that some fellow
named "Mr. Stair" had been able to do it so he just might as well give
it a try. :-)

I wonder if he wants to take those nice overhead
designs that landscape designers make and give
it a personal touch by using the real items, like
the real hardscape and whatnot. Either way, it
seems more trouble than it's worth, since you can
probably get the gps data at the local county office,
and probably an overhead shot of the neighborhood
if you go to a utility that's done work in the area
lately.

LASER rangefinders are coming down in price. A friend has
one several years old and it is accurate to +/-1MM at 100M.
Less then ~1/10" error at ~300'. I suspect the new one are even
cheaper and better.

Besides do you really need that type accuracy to apply law
chemicals?

With D(differential)GPS , with a close refference station
(within 30 miles) you can get very accurate measurements in
the sub mm region, but it won't come cheap. And you may
have to let the unit sit for several minutes to a hour or more.

I will stick with the $10 tape measure.

I do have a LASER level, it is handy to really see what the
drop on a bank really is. It cost me all of $7 at Harbour Freight.
We compared it to a several thousand$ commerical unit,
and my unit was withn an 1" at 1000'. Not as bright,but I
really like my eyes working!

Living in the same county as the Micro$oft zillionaires, I'd take him
at face value. He's probably selling his services to the hyperich.

I'd think that a balloon and/or kite camera (depending on the weather)
would be a whole lot cheaper to get going, and a lot less irritating to
the neighbors. Flying a helicopter drone over the wrong estate may
just be providing somebody with some very expensive skeet practice.

Unfortunately, to get a new good quality table top you will have to increase the price to around $600. You can get a very good quality used receiver for less (Yaesu FRG8800, Kenwood R2000, Kenwood R5000, Panasonic RF-B600), and have a wider range of choices. I don't know whether this would be an option though.

There are not many companies making tabletop receivers - many have dropped out of the market. In addition to the Icom R-75, which is a fine receiver, also consider the Yaesu FRG-100. Although discontinued it is available at:

This brings to mind an idea - what if people in the US and other free countries - not government, just plain people - just began to bombard Chinese receiving computers with every conceivable message about kicking out the Communist oppressors and electing a real government that answers to the populace? Is there hope of (1) getting 10,000,000 US citizens to do this, and (2)this type of thing having an effect?

Quick mobilization would be key here, I'd think.

Thanks everyone for your help.

I was able to find a Yaesu FRG-100 and a Grundig Satellit 800 on E-Bay for about the price my grandpa wants to spend, if no one else bids. =) Anyway, I just wanted to ask, do both of these models I've just mentioned have all of the features that I listed in the original post? I know that they meet the frequency requirements, are Single Side Band, CW, are Desktop-style, ... but are they "Continuous" frequency tuning and do they have "RF Gain Control"? I couldn't find these exact phrases from their descriptions on www.universal-radio.com. Thanks for the help again.

1274. Improved feed line

Newsgroup: rec.radio.shortwave
Date: 2005-06-14 01:07:02 UTC
From: r2000swler@hotmail.com
Message-ID: <1118711222.535471.147220@g49g2000cwa.googlegroups.com>
Source record: 24712

I have been trying to improve the SN, that is to reduce
the noise as much as I can, while prserving the desired signal.

This has been an on going battle evry since radio began.

The Doty antenna (http://www.anarc.org/naswa/badx/antennas/)
is a good starting place. This link (members.aol.com/WA1ION/nrants.pdf)
is a good improvement. I dropped his matching resistors and isolated
the braid on the output of the 9:1 step down. A minor improvement.
Took care of slme stubborn birdies from my equipment. I was troubled
by some odd "bleed through". While lloking into RG174 from a friend's
"hidden" antenna installation, I found a refference to an article
by John Brynt "Is Your Coax Lead-In Actually An Antenna"
(www.dxing.info/equipment/coax_leadin_bryant.pdf) that suppled some
answers that really helped me understand what is hhappening.

I did some experiments with "normal", or at least more common
braid only coax and compared it to braid+foil coax. The foil really
helped reduce the engress from one stuborn local MW. But it wasn't
completly removed. I was able to recude it to the level of leakage
directly into my reciver by placing a ferite toroid as Sugested by
John Brynt in the "coax" link.

A BIG step forward. But I still had a lot of QRM. While changing
my coax I decided to do some simple experiments. I was replacing
my antenna wire at the same time, so I snipped the horizonatal
section off leaving only the the vertical. My signal strength was
down a little, but the noise was as loud as ever. So I ran some
coax up to the support and reattatched the horizontal wire to a 9:1.
This helped but I still had a lot of QRN, not near as much as before
but I decided to see what I could do tho help. A Torroid as used
by Brynt really helped. So I decided to see what Triax would do.
Triax is coax with an outer insulated additional shield. I fed the
antenna wire to the hiZ hot, the outer shield went to the HiZ ground,
and the low z was connected to the inner conductor and inner braid.
At the base I grounded the outer braid, and use a 1:1 to couple the
inner conductors to the coax that makes the run to the house.

This really reduced the noise. I tested it by placing an especially
nasty wall wort next to the feed line. Always before I would get a
rapid jump in RF noise as the wall wort was placed near the feedline.
No RF creeping back p the feedline to enter then antenna.

I used 50 Ohm Triax, but tested a piece of 75 Ohm triax and there was
no difference between them on a 20' run. &% Ohm is a lot more common,
almost every TV station in the USA uses it and as they switch to

fibre',
it should become very common and CHEAP. You could probably get a 30'
piece just for the asking(that is how I got mine).
Forget Triax connectors, they are around $100 and look somewhat like
a BNC on steroids.

I tried Triax last fall but must have wired something wrong,
becuase it just didn't work bery well.

Now if the never to be cursed T-storms would let up for a few days
I might be able to enjoy the reduction in the local QRM.

And this link shows why I hate wall worts.
http://home.computer.net/~pritch/shortwav.htm
Wall worts are the worst but any device with un-bypassed
Si diodes can be nasty.

Terry

Buck, that was probably the trans-Atlantic link at Gander, Newfoundland. That airport was vital to trans-Atlantic planes as a refueling stop back in the days when planes couldn't make a crossing from the states to Europe on a carried fuel load, so they refueled there for the trip across. That hub then became important as the tracking center as a result. Once planes could make non-stop long distance flights, the airport declined and with it the role of reporting station. The airport was vital on Sept 11, 2001...handling and landing over 40 trans-atlantic jets when the grounding order came.

The MWARA centers (Major World Airway Routes Areas) still use the shortwave bands. Gander (VGA) is still active I think, as well as Azores and Iceland radio. I haven't heard the station in Ireland for some time (used to be Shanwick?).

Someone here will have the freqs.

Not only that Brenda but we sure don't want to live in a society that convicts on less than reasonable doubt. I haven't followed it too closely but I have yet to hear anybody I know give me a good reason for hanging him other than the usual he's weird so he must have done it type of reply. Does anybody here have an intelligent argument on the subject. I never thought he was a pedophile. I always thought he was just a lonely type that in his fame related to kids better than adults because he trusted them more or whatever. But like I said, I never followed his stuff that close. Enlighten me please.

The odd general behavior was/is pretty compelling 'evidence', but I for one
am glad that he wasn't convicted on that and the 'hearsay' evidence that the
prosecution proffered. It used to be that past accusations could not be
entered into evidence in a criminal trial.. even past convictions were not
allowed as evidence in the trial, only for sentencing purposes.

Well, that takes care of the Grundig then. I guess I'll just have to
focus on the specs of the Yaesu then. Thanks for the help Jim. I
appreciate it.

I thought I heard they found child porn. Is that true? Now if that was the case I'd have to start leaning in the other direction.

Nope, no child porn, just some adult porn. If they had found child porn,
I'm sure that charge would have been included in the gallery of charges they
brought (and if so, they would have had an excellent chance of conviction on
that one, since simple posession is a felony)

Remember Quantanamo? The White House said that even if they were all found innocent, they STILL wouldn't be released. Either you have justice or you don't. Why is the government immune from the law?

Dear Sir and Madam,
You will be very interested to know that we are manufactory of capacitors, which are ISO-9002 certificated with fine quality. All our products are RoHS and WEEE compliant.

our main products:

1,Ceramic Trimmer Capacitor
2,Metallized Polyester/Polypropylene Capacitor
3,High-voltage Ceramic Disc Capacitor
4,Mutilayer (Mono) Ceramic Capacitor
5,Chip/Dip Tantalum Capacitor
6,SMD Aluminum Electrolytic Capacitor

Varistor, Resistor, Diode & Relay are available too

Please contact amy@polytrade.com.hk to learn more about how we can help you.We are looking forward to hearing from you and desire to service for you.

Once the neighbours find out what he's doing, they're going to come calling. He'll be lucky to get just tarred and feathered before being run out of town. This badly conceived plan is a major invasion of privacy and could likely result in some lawsuits. People have a right to expect privacy in their own yards.

Shanwick (Shannon/Prestwick) still there. I heard them last night with routine transatlantic traffic and rerouting for an Olympic flight with a passenger who apparently had a stroke - gave them a fast direct routing to Shannon.

New York and Santa Maria are still very active.

Yeah, but the legislators in Sacramento CHANGED THE LAW so that in child molest cases previous allegations of behavior, even if unsubstantiated, CAN be used against the defendant. I'm not sure why; I always figured that if true the current charges could stand on their own, and the public hates child molestors anyway so they usually are convicted.

There's a good reason that juries are required to believe that somebody did a crime without a reasonable doubt before convicting, and that's to avoid convictions over hearsay. Many people, most of them ordinary citizens, have gotten off because the defense was able to show the slightest hint of reasonable doubt. "He's weird, therefore he's guilty" is NOT admissible evidence. Add to that the fact that the family has had cases thrown out of court before on suspicion of fraud, and the defense argument that the mother wants to frame Michael for whatever reason holds a lot of water.

We can armchair psychoanalyze Michael until the cows come home, but he seems to me to have always identified more with kids rather than with adults because of his childhood traumas and the fact that he never had a carefree childhood-he started performing at the age of 5, and was whipped with a belt by his father if his performance on a particular night fell short of dad's standards. All the Peter Pan murals and the odd behavior around kids can be traced back to the fact that he never really WAS a kid. If he did it, I doubt that he views it as hurting a child, he views it as legit affection, and he can't tell the difference because he's emotionally stunted. He's one sad sack in any case.

Back to the BBC: I just finished listening to The World Today, and most of the broadcast was about Michael Jackson. Just goes to show you that he remains MUCH more popular in Europe than in America. One commentator noted that Michael could probably make good money touring Eastern Europe, where his popularity never really waned. Also, European media doesn't have many of the constraints that American media does surrounding such cases; the BBC has openly mentioned the accuser's name on shortwave many times, while American media is forbidden from doing so.

You mean 'innocent until proven guilty' and 'beyond a reasonable doubt'? That sort of justice?

Thank God we've got that, for all its flaws, instead of mob justice.

The Icom R-75, which I also own, is an XLNT receiver having every feature
you wanted and then some. Unfortunately, it has just been discontinued but
new ones are probably still available somewhere. They, unfortunately, are
closer to $500 when purchased new.

...Coverage: 100kHz to 30MHz (continuous) ....

Some radios may go down only as low as 150kHz, or omit some coverage
between 150 kHz and 540 kHz, or wherever it is that the MW band begins
these days. That may not be a big problem.

Thanks Jim. Yeah, I'm going to give him a call tomorrow and let him
know that prices have changed since the last time he bought a shortwave
(25 years ago). I'll let him know that the Grundig has everything but
the RF Gain Control knob and see what he wants to do. Don't think they
can afford $500 right now, though, so don't know about the Icom.
Thanks again Jim.

In my estimation it would just cause them to try to further squelch
their populace from receiving anything. In the end, the Chinese
people would end up hearing less from the rest of the world. The
leadership would never mention it to the public for what it is and it
would be billed as an attack on their sovereign nation by the evil
westerners. Also, the messages would need to be addressed to the mail
servers and not individuals as the government would very conceivably
go after the recipients in some manner. Though I must admit that the
thought of their 'server censors' going down from a flood of e-mail is
..... well, it's sublime, my hat's off to you for the idea.

Of course she did it. How can you have 4KG of cannibis in a boogie
normally wieghs 2KG) board bag and not notice it - then go through
customs pretending the bulging mass isn't in there. Plus when she was
asked if the cannibis was hers at customs she said 'yes'.

Rediculous to think she is innocent - of course she knew what was going on.

Note that China sometimes jams programs in Mandarin or Cantonese or whatever, but they almost never bother to jam programs in English from the same broadcasters. Eg, VOA's Mandarin stream vs. their English stream.

I'd worry about the Xtn fundamentalists, if I were you. They don't fear Armageddon, probably expect to be Raptured while we sinners suffer.

Maybe Bush expected to be Raptured as soon as he over-ran Baghdad. That may explain why he didn't plan for an occupation.

Well Mike....let's put you out in the field with the soldiers; and some radical extremist are leveling AK-47, RPG, and other heavy Chinese made mortars at your men and yourself....welcome to war! Would the USA declaring war on Afghanistan induced you to voluntairly enlist to defend your country...probably not, as a former "patriotic, politically correct" group did after Pearl Harbor....we went to war on a bare majority vote.

Second, would you prefer that we killed them all in the field, or in a sealed semi-trailer as the locals did when they captured them??? Or better yet, try sorting out the local population from the foreign fighters there....we at least stopped them from bashing in the heads of the people in the stadiums, and other "civilized" behavior. Bottom-line...war declared or otherwise is all about kill or be killed. It is easy to sit back and preach "legality" but if you lived and worked overseas like I and other Americans do for the government or industry under the US State Department guise, you would know that we have little to no rights.

Third, to gather intelligence from these disparate anarchists groups takes time....and after some have given up the truth or have been verified as standbyers, we have released them to their parent countries. The ones left in "Gitmo" are there for good reasons...in our jail system we have parole boards...most time the hardened criminals stay put unlike the European prison model that "rehabs" them and forgives their crime completely (most of the police in Italy have been minor criminals...try that in the USA,,,once convicted, always a criminal).

Since these "foreign fighters" were not under their parent countries command, they are caught between the international criminal code...or if under the Afghan government's control (Taliban at the time), then they are prisoners of war, or war criminals. The fact is that the Taliban government kept their status secret as their means of external support...therefore they are in limbo. Now maybe we could release them under and work-release program in your town, and you could babysit them until they start killing Americans again!!!

If you and others feel guilty about Gitmo, then feel guilty for re-electing a President who blew-off intel reports, and who's only reaction to terrorists' actions was a few miserably targeted cruise missiles (we got a pharamaceutical factory, but missed Bin Laden's bank in he Sudan).

Joe (I've been and am there!!!)

"I had in mind, buying an inexpensive MW, SW, FM, TV,Weather "multi"
radio
with decent AM sound quality."

Spend a few weekends cruising the garage and estate sales for a used model in your area. There are usually plenty of them, including a few high quality Panasonic RF-2600, 2800 and 2900 portables.

The only caveat would be to plug it in and try all controls including the sometimes troublesome bandswitch.

Something else to consider is his existing radio may be worth repairing, or selling as a broken radio. This would add to his budget.

Some folks buy broken radios to fix them for use or resale.

One guy buys just about anything that would be desirable if it was in good condition and fixes the description. (It's faster and cheaper than fixing the radio)

If you tell us what he's got, odds are someone here will have an idea of what it's worth.

As for a radio to look for, I'd consider a used Drake R8 if you can find one in your price range.

One thing you might want to consider is build quality. The Sat 800 is
built like a toy -- soft plastic. The electronics -- IF you get a
good one -- are solid, though. The ICOM R-75 and Yaesu FRG-100 are
both well built. Having had both, I like the FRG-100. Less features,
less "glamour," excellent performance.

Sold both, but only miss the Frog.

To clarify, they found adult porn with the accuser's fingerprints on
it.

I'm sorry... just because the mother is a sleazeball doesn't exonerate
Jacko. It has been said before -- if he weren't a wealthy celebrity
with a high profile, the case would have been open and shut. *Not
having heard the courtroom presentation,* I can only go by what I see,
and I acknowledge that the jury may have seen it differently.

Joe,

First off, thanks for being there.

Second off, mII is a canadian bomb thrower. He really needs to get a life since what he has now is only just an obsessive hatred of the U.S. He didn't vote for anyone here.

Third... I, for one, am NOT disputing the needs to defend yourself on a battlefield, and am frankly appalled that lawyers are consulted whenever missions are planned back here in the Five Sided Funny Farm.

But Gitmo is a disaster. We should treat them as POWs, even if they don't wear a uniform or fight under a western-style nation-state. Alternatively, the Geneva Convention says that spies -- that is, soldiers in civilian clothes -- may be summarily executed.

Personally, I thought the last election was one of the worst set of choices since, well, Gore and Bush. Even Mondale/Reagan wasn't this bad.

Now, whatever you may think of my rambling opinions, stay safe and keep your head down.

Nothing like condensing a complex matter down to
a single sound bite. Sounds complete, doesn't it??
Is it complete?? Not at all; there were many reasons
for the American War of Independence, and describing
it in 20th/21st Century terms (with all the baggage
that it entails) does not do it justice.

I use one of these antennas for SWL. For this purpose, I can say that it's a nice, self-contained, very portable passive antenna. Works well as a quick, easy-to-use option for the Drake SW-8. I like using it with the some of the Sony SW77, as well. It offers a nice improvement over the whip antennas of either of these models (comparable to the improvement you'd see with some active antennas), and for the Drake it attaches nicely to the SO-239 antenna jack so as to become simply a part of the radio itself. Good antenna.

Okay, here's the Fourteenth Amendment, section one, the part that has to do with equal protection:

Section 1. All persons born or naturalized in the United States, and subject to the jurisdiction thereof, are citizens of the United States and of the State wherein they reside. No State shall make or enforce any law which shall abridge the privileges or immunities of citizens of the United States; nor shall any State deprive any person of life, liberty, or property, without due process of law; nor deny to any person within its jurisdiction the equal protection of the laws.

Query: How does this apply to a federal military prison on foreign soil?

It would appear that this bit " nor shall any State deprive any person of life,liberty, or property, without due process of law; nor deny to any person within its jurisdiction the equal protection of the laws." might apply to everyone? The expedient of holding people in an off-shore military base may serve some information gathering and strategic purpose. We actually know almost nothing about the people help there, except for the few people who are British and Australian citizens, some of whom have been released.

How did they "de-nazi-ify" Germans post WW2?

Yes, now that Sony is no longer making the SW77, the ATS 909 is
probably the best portable around.

It'll probably continue to be the best portable around after Eton
releases its E1 XM receiver, which, according to the Universal website,
has been delayed YET AGAIN until late July.

Eton should do itself a favor and put the E1 out of its misery.

Steve

You think cheating merchants are a recent invention? Wake up. George
Bush is the guy we invented this country to get away from.

George Robert Twelvetrees Hewes noted that many American colonists
either boycotted the purchase of tea, or were smuggling or purchasing
smuggled tea to avoid supporting the East India Companyï¿½s profits and
the British taxes on tea, which, according to Heweså¿½ account of 1773,
ï¿½rendered the smuggling of [tea] an object and was frequently
practiced, and their resolutions against using it, although observed
by many with little fidelity, had greatly diminished the importation
into the colonies of this commodity. Meanwhile,ï¿½ Hewes noted, ï¿½an
immense quantity of it was accumulated in the warehouses of the East
India Company in England. This company petitioned the king to suppress
the duty of three pence per pound upon its introduction into Americaï¿½ï¿½

That petition was successful and produced the Tea Act of 1773: the
result was a boom for the transnational East India Company
corporation, and a big problem for the entrepreneurial American
ï¿½smugglers.ï¿½

As Hewes notes: ï¿½The [East India] Company, however, received
permission to transport tea, free of all duty, from Great Britain to
Americaï¿½ï¿½ allowing it to wipe out its small competitors and take over
the tea business in all of America. ï¿½Hence,ï¿½ he told his biographer,
ï¿½it was no longer the small vessels of private merchants, who went to
vend tea for their own account in the ports of the colonies, but, on
the contrary, ships of an enormous burthen, that transported immense
quantities of this commodity, which by the aid of the public
authority, might, as they supposed, easily be landed, and amassed in
suitable magazines. Accordingly the Company sent its agents at Boston,
New York, and Philadelphia, six hundred chests of tea, and a
proportionate number to Charleston, and other maritime cities of the
American continent. The colonies were now arrived at the decisive

moment when they must cast the dye, and determine their courseï¿½ï¿½

Interestingly, Hewes notes that it wasnï¿½t just American small businesses and citizens who objected to the new monopoly powers granted the East India Company by the English Parliament. The East India Company was also putting out of business many smaller tea exporters in England, who had been doing business with American family-owned retail stores for decades, and those companies began a protest in England that was simultaneous with the American protests against transnational corporate bullying and the East India Companyï¿½s buying of influence with the British Parliament.

Hewes notes: ï¿½Even in England individuals were not wanting, who fanned this fire; some from a desire to baffle the government, others from motives of private interest, says the historian of the event, and jealousy at the opportunity offered the East India Company, to make immense profits to their prejudice.

ï¿½These opposers [sic] of the measure in England [the Tea Act of 1773] wrote therefore to America, encouraging a strenuous resistance. They represented to the colonists that this would prove their last trial, and that if they should triumph now, their liberty was secured forever; but if they should yield, they must bow their necks to the yoke of slavery. The materials were so prepared and disposed that they could easily kindle.ï¿½

The battle between the small businessmen of America and the huge multinational East India Company actually began in Pennsylvania, according to Hewes. ï¿½At Philadelphia,ï¿½ he writes, ï¿½those to whom the teas of the [East India] Company were intended to be consigned, were induced by persuasion, or constrained by menaces, to promise, on no terms, to accept the proffered consignment.

ï¿½At New-York, Captain Sears and McDougal, daring and enterprising men, effected a concert of will [against the East India Company], between the smugglers, the merchants, and the sons of liberty [who had all joined forces and in most cases were the same people]. Pamphlets suited to the conjecture, were daily distributed, and nothing was left unattempted by popular leaders, to obtain their purpose.ï¿½

Resistance was organizing and growing and the Tea Act was the final straw. The citizens of the colonies were preparing to throw off one of the corporations that for almost two hundred years had determined nearly every aspect of their lives through its economic and political power. They were planning to destroy the goods of the worldï¿½s largest multinational corporation, intimidate its employees, and face down the guns of the government that supported it.''

Proof is in the memo: Soldiers died for a lie
http://www.recordonline.com/archive/2005/06/13/bethcolj.htm
Beth Quinn/Times Herald-Record | June 14 2005
http://www.prisonplanet.com/articles/june2005/140605diedforalie.htm

What else is there to say when some fool in Washington says the equivalent of, "No, you're wrong. Humans don't breathe oxygen. No truth in that!"

And then • just to compound the absurdity • the press reports that humans don't breathe oxygen. And then Americans are suddenly waving flags about the fact that we can now breathe underwater.

Yet the opposite happens when someone says something anti-Bush, such as, "We now have proof that Bush lied about weapons of mass destruction in Iraq." Whoops and lo and behold! • the press fails to report this kind of un-American news at all.

That's what happened six weeks ago when The Times of London obtained and printed a top-secret memo written by a guy named Matthew Rycroft, Britain's secretary of foreign affairs.

What has become known as the Downing Street Memo is a report on a meeting between Rycroft and the White House in July 2002 • a good seven months before Bush invaded Iraq. The memo says Bush had already decided to attack. It also says Bush knew there were no WMDs in Iraq, but that "the facts were being fixed around the policy."

This, my fellow Americans, is the hottest news out there in the big, old rest of the world. The story, which has been reported prominently in The Times of London since May 1, has gotten more hits on the Internet than any other in the newspaper's history.

All the world • except America • is buzzing about the fact that George Bush created the WMD threat to justify his war in Iraq.

But here in America, where news is increasingly controlled by the White House, this story has barely made the back pages. Still not a word about it on CNN. And it's only in the past couple of weeks that the Washington Post has started writing about it.

Fortunately for us, Record reporter Dave Richardson has been paying attention (see accompanying story).

What we're talking about here is proof that Bush engineered the war in Iraq • based on a lie.

What we're talking about here is 1,700 dead Americans • based on a lie.

What we're talking about here is Lou Allen of Milford, Pa.; Brian Pavlich of Port Jervis; Eugene Williams of Highland; Irving Medina of Middletown; Doron Chan of Highland; Catalin Dima of White Lake; Brian Parrello of West Milford, N.J.; Kenneth VonRonn of Bloomingburg; Joseph Tremblay of New Windsor.
All dead based on a lie.

What I can't understand what's making my head pop off is that so many Americans are indifferent to this kind of news. Is it because Americans expect presidents to lie, so it's not news when they do (unless it involves sex)?
Is it because this is simply confirmation of what we sort of knew all along anyway and so what we got Saddam (even though Osama is still at large)?

Is it because no one really cares what happens to our troops even those of you with those stupid, yellow "Support Our Troops" magnets on your cars? Tell me, what have you done to support our troops other than put a stupid, yellow magnet on your car?

If you really want to support our troops, I have a suggestion: Demand a confession from George Bush.

Last week, 89 members of Congress signed a petition authored by Democratic Rep. John Conyers doing just that. They want answers. You should, too.
Before all our heads pop off, let's add our names to Conyers' petition. Let's start acting like Americans again. Let's force Bush to act like one, too.

And then, if it turns out he lied, as the Downing Street Memo most surely suggests, let's impeach him.

That's what we do to presidents who lie, remember?

"A dictatorship would be a heck of a lot easier, there's no question about it."

George W. Bush -- July 27, 2001

"If this were a dictatorship, it would be a heck of a lot easier, just so long as I'm the dictator."

George W. Bush -- at a televised Newsconference, 2/18/00

Nobody cares. Troops getting in harms way, not getting the equipment they need, no definite end in sight. At least the potential enlistess are sitting out and the Pentagon quotas aren't being met. They know what a bum deal they could be getting themselves into.

Making this a SW related post...I haven't listened today. Does the world think were crazy for letting jackson free?

The key word is "State." The purpose of the Fourteenth Amendment was to make clear that the due process clause of the Fifth Amendment applies to states just as much as to the federal government. No individual state has jurisdiction either over the military or its overseas bases.

>From everything I've read the 909 is a well designed and good performing if not compact receiver. It should fill the bill for many of us. Going downscale some in features and a lot in price the Degen DE1103 provides a high value for the money in a very compact package.

Is Eton developing the same reputation it's predecessor Grundig USA had for producing vaporware? Or at least multiple press releases announcing yet another new product then delaying it again and again?

Check eBay for a Kenwood R-1000 or R-2000. Those will be in the price range, and meet all the requirements.

BTW, CW = Continuous Wave (which really means Morse Code).

The nice thing about buying new, is you get what you want, when you want it.
To juggle through other people's junk, like a circus clown, can be an acquired taste.
Heartland America oftentimes does seem to have some inteesting little deals.
Another website with an eclectic collection of things is Sportsmans Guide dot com.

the
> guns of the government that supported it.''

Like I said, the American War of Independence has
many complex causes, and the tea tax is one of them.
You're forgetting the resistance of westward expansion
of the colonies by England; the resistance to any tax
after the Seven Years War, no matter how light; the
lack of representation in Parliament, which grated most
on the gentry; and the reactions to Parliament of the
colonists' actions (among others). Even then, the
colonies were not certain as to what to do. Most of the
northeastern colonies wanted to push for Independence,
while the southern colonies were more in favor of
remaining with England but having their grievances
addressed. Sure, they were mad as hell, but that step
toward Revolution was not one that most wanted to take.
Not then, at any rate.

Considering the huge numbers of loyalists in the
colonies before and during the WoI, apparently not
all were swayed enough. It was one of England's
great failings in the war: to not take advantage of the
loyalist sentiment around. When they did, they
didn't rein in the loyalist gangs and the loyalists
behaved in a manner that made it easier to stir up
rebel sentiment against them. Officers like Tarleton
made it easy to stir up resistance as well.

Using labels like "multinational corporations" implies
things in 20th and 21st Century minds that are deceptive
to the reality of 18th Century Europe. Attitudes toward
and behavior concerning multinational corporations have

changed in the 200+ years since the Tea Tax.

I'm not sure I understand the aversion to second hand goods, but to each his own I guess. The outfall from estates has been a mainstay of antique dealers for as long as that business has been around. In my area at least the companies that manage estate sales tend to be a bit selective in the estates they sell.

One possible problem with buying new shortwave receivers is that the number of choices continues to dwindle. I don't know who remains in the business of making tabletops...Japan Radio maybe? The big guns, Kenwood, Yaesu, Icom, Panasonic and Sony have all pulled out. The range of used receivers is much wider than new.

Sometimes those of us that enjoy a bit of digging can find "diamonds". Well, maybe with some topaz and aquamarine mixed in, but you get the idea. For example I've found in excellent condition a National HRO-500 for $25.00, a Sony ICF-5900 for $10.00, Panasonic RF-5000b for $50.00 and a Zenith TO for $10.00 Photography is another bug, and I found a complete Canon VT-Deluxe outfit - lenses, body, filters, all items in original boxes for $200.00

No doubt, bargain hunting can be addictive. Here,in Colorado Springs, they have thrift stores, and pawn shops, like some kind of infestation. I already had the junk-sifting bug, and this place has exploited it. It must e the presense of a military base that causes the turnaround in goods here. When I walk in, it's straight to the electronics section.

Not Proved
I understand that Scottish law has an alternative verdict to
"guilty" or "not guilty" to be used when the prosecutor has a weak
case. From the comments of the jury it would be useful to think of "not
proved" which under US law is rendered as "not guilty."
If the facts don't fit,
You've got to acquit.

I've tried pawn shops with no real luck. Here on the east coast it can be a fun saturday morning to line up at an estate sale at some 200 year old home chock full of goodies I never knew I needed 'till I saw them. Seriously, I'm selective otherwise my house could be overflowing in an instant.

Oh? And how is an unmodulated AM carrier different than an unmodulated FM carrier?

> Morse code is just the most common way to *use* CW.

In shortwave/ham radio use, CW is understood to mean Morse code. I'm sure that's how his grandfather meant it. "CW" was originally used to differentiate "continuous wave" telegraphy from "spark" telegraphy ("spark" being a damped sinusoid).

1368. AC-to-DC Power Adapters [Wall Warts] and reducing AC Hum and RF Signal migration

Newsgroup: rec.radio.shortwave
Date: 2005-06-14 22:10:37 UTC
From: RHF <rhf-newsgroups@pacbell.net>
Message-ID: <1118787037.063819.282700@g44g2000cwa.googlegroups.com>
Source record: 24757

R200SW,
.
The Clamp-On/Snap-On Ferrite Cores work well on the AC Line Cord
of an AC-to-DC Power Adapters [Wall Warts] or when placed just a
few inches from where the DC Output Wires exit the Wall Wart.
.
FWIW - I have found that using a "Donut" Shaped Ceramic Magnet on
the DC [Output] Cord about 6" from the DC Input Power Plug to the
Radio or other equipment; really kills the last bit of AC Hum and
RF Signals migration up or down the DC Side of the Wall Wart.
.
NOTE - These Donut shaped Magnets can be bought at RadioShack and
'look like' a 1"x1/2"x1/4" Ferrite Toroidal Core; but they are
Ceramic Magnets. aka: Refrigerator Magnets
Loop the DC Output Twin-Wires (+ & - Leads) and stick the Looped
Wires through the Hole in the Center of the Ceramic Donut Magnet
once or twice; and secure the Wires with Tape or Plastic Wire Ties.
.
TIP - If you buy/use the big Clamp-On Ferrite Cores; after the First
'pass-thru' you may find that you can Loop the Power Cord around for
a Second or Third 'pass-thru'. Keep this Loop small and close to the
Body of the Ferrite Core. Use a Plasitc Cable-Tie if need to hold
everything together.

The predatory governmet in Washington wants our children. They have more body bags to fill, and they intent to fill them.

It is our duty as Stewards of the Youth Of America to protect them from any kind or predators.

We have no greater duty than to protect them from Bush as we would a child molester. That is first and formeost.

Picket your nearest recruiters. Tell the recruiters when the come out of the door for lunch to leave our children alone.

Let our children keep their innocence. Dont make kid a killer. Dont make him an invalid or a corpse. There should be enough adult war supporters out there to do what Bush wants them to do.

All adult war supporters step to the front of the line. Only a few weeks of training and you can be living your dream in Iraq.

STAY THE FUCK OUT OF OUR SCHOOLS. THEY ARE FOR EDUCATION, NOT CORPSE GATHERING.

'DONT LIE AND CONIVE AN INNOCENT KID INTO A BODY BAG OR FALSE LIMBS."

If we fail our children, now, when they need us the most, we will have failed at life.

The military will soon have to force our children into consription. That will the be the straw that breaks bushs back.

He promised his faithful he would not draft.

This will bring the horror of war to the very living rooms of every American parent.

Then, they will be tested with the greatest test of all.

Do they please Bush by donating their Child to his greed? Or, do they take it to the fuckin streets?

Yeah, I received an email from Andy today. Apparently the phone and internet service had been down for a bit. I figure I'll order one within the next week. I'm slightly hesitant though due to the awful exchange rate. It looks like it's going to run me about 340 US bucks shipped; but that's what Stafford loans are for, right. I've yet to read a negative comment about Wellbrook's loops, so I feel I'll be pleased with the results.

That's Jehu chiding Jehoshophat because Jehoshophat's people mistreated Micaiah. Certainly it's not the all-encompassing thing you misrepresent it to be.

< Snip >

"Is Your Coax Lead-In Actually An Antenna"
I posted about using coax for an antenna here a few days ago. If the coax is not grounded on both ends it can be a very good antenna. I'm using a 40 foot coax loop to listen to New Zealand as I type this. They are S7 to S9 nice and quiet with no interfering noise with the volume turned up. I live in town at the beach, other homes and businesses where there is local noise generation aplenty all around me. Yes I also have AM stations in town a few miles away.

Most voltage sensitive antennas I have put up get noisier the lower in frequency I try to use them. The AM broadcast band is terrible on these antennas around here. The coax loop is as quiet or better than the ferrite loop in a portable.

For a loop this size you should use a shielded type where the shield is split in the middle of the loop to minimize voltage pickup. You want the antenna to be picking up the magnetic component of the EM wave only.

I have a pair of ALA1530s as part of a phased array. They're less sensitive
than (say) a Dymek McKay DA100E whip as to S/N in a quiet location, more obviously
so at higher frequencies, but they're very handy for their pre-aimed null and
I use them more often than the whips in combination. In a noisy environment
they're probably much superior to the whip.

You can combine one with a whip at the same location and produce a forward to back
double null rather than a two opposite nulls (or any combination in a V between them),
without taking any real estate at all.

``Forward'' and ``back'' are in the plane of the loop, so you can aim the entire
pattern by turning the loop physically.

So, in short, if you're dithering about whether to get a whip or a loop, you can
get the loop first and add a whip later.

Good deals John. You obviously have a knack at finding decent items cheap.
I'm going to start going to some of these estate sales down here in Florida.
You see these 2 million dollar homes in some of the best neighborhoods in
town having these estate sales.

I know this girl that dragged me to one once. She bought 2 of these ceiling
lights with fans for about $35 each. I later found out they go for over $300
each new. They hire these "estate auction people" to sell off their stuff
for them and some of them have no idea what they really possess and how to
price them.

How is BBC World getting stuck into BPL hype?

First, the article isn't about BPL, it's about networking with equipment meeting the homeplug standard. The most obvious distinction between BPL and homeplug is that BPL has the potential to cause widespread radio interference while homeplug's interference would be local.

Second, there really isn't much hype in the article. Sure, the article starts out with some of the vendor's self-serving claims but the article goes on to say:

"That means that using the mains as a home network could interfere with your enjoyment of shortwave radio, which is used by lots of broadcasters around the world, including the BBC World Service, and air traffic control. "

It further states:

"In 2004, BBC researchers conducted an investigation into Homeplug-compliant power line communications, to see whether they did affect radio reception."

"They found that as soon as data starts flowing, the radio signal is obliterated."

Maybe I'm missing something, but that doesn't seem much like hype.

> >
> People were much smarter 220 years ago.

Invalid comparison. The realities of the 18th
Century world are different than today's. There's
a helluva lot more math, science and political
science to know now than back then. Items such
as calculus were still new; many basic concepts
in science -such as electricity- had their genesis
then, with other concepts such as bacteria still
a century away; and the notions of Anarchism,
Socialism, and Marxism were a century away,
as well. The novel was just evolving, and what
was necessary to function well in the world was
much less than it is today. The notion of public
education as it evolved was a creature of the 19th
Century. Very few ever attended any college or
university at all, but then again, it wasn't necessary
to do well in the world with one.

In shortwave use 'CW mode' means having a adjustable BFO to adjust the
listenig tone to a frequency the listener likes best.

> "CW" was originally used to
>differentiate "continuous wave" telegraphy from "spark" telegraphy
>("spark" being a damped sinusoid).
>

Technically spoken CW is independent from any code. You're free to use
your own created code on the HAM-bands when you make the syntax available.
You can send 'morse' code in FM-mode very easy. But you have to have a
tone generator in the TX and you have the limitation not being able to
adjust the listening tone in the RX.
At least telegraphy -with morse code- was used first on 'telegraphy
stations' connected by wire....

Greetings,
Volker

Telamon wrote:

"Is Your Coax Lead-In Actually An Antenna"
I posted about using coax for an antenna here a few days ago. If the coax is not grounded on both ends it can be a very good antenna. I'm using a 40 foot coax loop to listen to New Zealand as I type this. They are S7 to S9 nice and quiet with no interfering noise with the volume turned up. I live in town at the beach, other homes and businesses where there is local noise generation aplenty all around me. Yes I also have AM stations in town a few miles away.

Most voltage sensitive antennas I have put up get noisier the lower in frequency I try to use them. The AM broadcast band is terrible on these antennas around here. The coax loop is as quiet or better than the ferrite loop in a portable.

For a loop this size you should use a shielded type where the shield is split in the middle of the loop to minimize voltage pickup. You want the antenna to be picking up the magnetic component of the EM wave only.

--
Telamon
Ventura, California

I was addressing one's coax/feedline being an unintentional
antenna.
Triax is coax with an additonal outer shield that is insulated from
the inner shield.
See:http://bwccat.belden.com/ecat/jsp/Index.jsp?&P1=undefined&P2=undefined&P3=undefined&P4
=undefined&P5=undefined&P6=undefined

In the event line wrap kills this link, go to www.belden.com
and type triax in the search window.

I found the vertical wire leading up toy horizontal antenna was piking up more noise then desired RF. I replaced it with coax but still had some ingress. So I tried a piece of Triax. It removed all the noise one the vertical
run.

Please see my post on "simple tests" to folllow.

Terry

It might help the new listener to do some rather simple tests.
Disconnect the antenna from your receiver and tune from the minimum
to maximum freq, noting any birdies or signals you receive.
Many(most?) receivers leak RF from the IF strip that can be received
weakly. Many receivers use 455KHZ so check 455KHZ, and the 2nd
(910KHz),
and the 3rd(1365) harmonics. Pay close attention to any MW or SW
stations you recieve. This test is best done with a 50 Ohm dummy load
on the anntena port, but it is still usefull to know what leaks you
have.
Many of these birdies will be below the noise floor when an antenna is
connected. But they are usefull to now about because they could
interferr
with a very weak signal and can be used as a quick check if you suspect

your receiver of having a problem.

Now connect your coaxial feedline, but disconnect the antenna.
Repeat the search. I will bet that many will be surpised to
find they can receive several MW outlets and oftenmore then a few
SW signals. This is a weak point for RFI to enter your system.

I found that the braid+foil coax had less ingress. Most braid and
foil coax is 75 ohm, but Belden does offer several 50 ohm versions.
I am using Belden 7807A. But I could detect no difference when using
Belden 1258AM 75 Ohm CATV cable.

John Doty's suggestion of placing the coax feedline underground
can help a lot. (http://www.anarc.org/naswa/badx/antennas/)
As can a 1:1 RF transformer before the coax enter the home.
(http://www.members.aol.com/WA1ION/nrants.pdf).
John Brynt's work on feedline ingress is very informative.
(www.dxing.info/equipment/coax_leadin_bryant.pdf) I found that
adding a ferrite torroid with ~20 turns of RG174 at each end helped
reduce the ingress a "lot". To the one MW station I receive with
no antenna.

My reasoning is that the best way to improve your RF signal is
to reduce the invading noise as much as posible. Beyond a reasonable
point, adding more wire doesn't help very much and may well hurt.
A longer wire picks up more signal and more noise. By optimising
our RF signal reception and minimising our RF noise pickup can
greatly improve our stions noise floor. And that set the lower
limit on what we can recieve.

"dxAce" mentioned that he has his 9:1 transformer elevated and feed with his coax. In an RF quite location this is a very good and workable option. And it worked much better then an unshielded wire.

In "http://members.aol.com/DXerCapeCod/z_transformers.pdf", John Bryant shows 4 basic ways to use a transformer.
I am using a variation on Circuit A. In between T-storms I think it makes a big difference.

At the very least, users of the "Doty" system may wish to rethink the inclusion of an unshielded vertical element. I suspect if more ham and SWLS knew about Triax much more research would have been made using this "odd" cable.

I have been given a ~150 spool of used, but good 75 Ohm Triax. When time permits I plan on doing an feed line using Triax from head to entry point. I suspect that the most gain will be in the critical first few feet.

With coax, my standard QRM noise source, a noisy wall wort, would add noise to the recieved signal when it was brought within a foot or so of the coax. With Triax I could place the noise source against the Triax with NO increase in noise. With the antenna disconnected from the coax no increase in noise was noted. I think the noise is travelling up the shield and getting into the antenna. Ferrite RFI split beads helped reduce the ingress on the coax slightly. If one could get enough ferrite it might choke the noise off completly. I decided to test something else before scrounging up 50 more beads.

The next few weeks(months) will be spent building an outboard IF/synch detector with SSB/CW capability. Furtehr antenna experimentation will likely have to wait untill the fall.

Terry

Cite? The concept of evolution was still a half
century away. The witch persecutions were
less than a century removed. The authors during
the Age of Enlightenment are just that: those in
the forefront of thought, not the common people.
Judging the mass of people on the writings of
a few is a big mistake.

> People today wouldn't last 3 weeks in 1775.

And the reverse would be true, too. You are stepping
into a foreign country where you really don't speak
the language or know the customs (or much of
anything else, for that matter), and you're expected
to survive.

I don't think you can use the absence of child porn as a strong indication he's
not a pedophile.

Garden variety porn might have been a tool used in the grooming process.

I imagine if a pedophile showed a kid child porn, it wouldn't take very long for
the kid to figure things out and get very uncomfortable.

I'm not sure he's a pedophile - but if I was a parent, I wouldn't want him alone with my kids.

Hi Brian
i some how don't think you will be disappointed.
i was not sure about paying so much for an antenna. but i haven't looked back since. i have my 330S mounted about 30 foot high and it is mounted at the back of my house. the bottom of the loop is about 2 foot above the ridge tiles on my house.....
i have 3 sons all have there PS2,s and tv,s going at the same time the wife has sky tv in the lounge. and this little lot generates lots of noise. but i have no problems useing one of my receivers with the 330S loop as it cuts out almost all of the noise
the main receiver i use with the 330S is a JRC NRD-545. the two work well together. i also use an AR5000 with the loop as this has excellent HF

lets know how you get on....

International Broadcasting: Building a Better House

Comments Delivered by Mark Helmke,
Senior Professional Staff Member
U.S. Senate Foreign Relations Committee
Richard G. Lugar, Chairman

The Heritage Foundation Conference on
"U.S. Public Diplomacy – Roadmap to Recovery"

June 14, 2005
Washington, DC

International broadcasting financed by the U.S. government has lost its way.

The world has radically changed, but the institution supporting international broadcasting has not.

The Broadcasting Board of Governors (BBG), which oversees the myriad of broadcasting entities under its control, has a grand strategy called "marrying the message to the mission."

It's not working. The various missions are uncoordinated. They often work at cross purposes, and the divergent messages are confusing and counterproductive.

Despite these problems, let me be clear: they are not the fault of the thousands of dedicated and professional people working for the Voice of America (VOA), Radio Free Europe/Radio Liberty (RFE/RL), Radio Free Asia (RFA), Radio and TV Marti, and the new Middle East Broadcasting Networks which runs Al Hurra and Radio Sawa. Nor are the problems caused by BBG Chairman Ken Tomlinson, Norm Pattiz – the godfather of Al Hurra and Radio Sawa – or others.

The fault lies with all of us for causing the creation and evolution of such a confusing federal agency of multiple public and quasi-private entities run by political appointees of both parties. The fault lies with the lack of long term bipartisan strategic thinking and agreement on American public diplomacy in the post-9/11 world.

Understanding the history of American international broadcasting provides direction for the reforms required today. Voice of America was started by the War Department soon after Pearl Harbor and America's entry in World War II. America had seen the power of Nazi propaganda and determined to counter it with American government sponsored free press. That raises the first question we must now debate: Can the government sponsor free press?

Interestingly, Ken Tomlinson, the chairman of the Broadcasting Board of Governor, and also the Chairman of the Corporation for Public Broadcast

(CPB), which oversees the Public Broadcast Service (PBS) and National Public Radio (NPR), is asking serious, and controversial questions, about how open and free a government subsidized domestic media can be.

In addition to VOA, the United States also created during World War II Radio Free Europe and later Radio Liberty. These were creations of the OSS and then the CIA. These were transformational communications entities. The enduring images of RFE/RL are of the Free French fighter, and later Vaclav Havel behind the Iron Curtain, listening to their crystal sets, and then taking action against totalitarian dictatorships.

VOA and the so-called surrogates, RFE/RL, were powerful forces in the liberation of Europe and Asia during World War II and the Cold War.

Three confusing and confounding policies, however, have emerged from these efforts.

First, Congress did not want to create an American BBC. Once a country was “liberated,” American government financed broadcasting stopped, regardless of whether there was an indigenous free press that could survive and thrive. Consequently, we’ve never developed a comprehensive policy for how free press fits into democracy and nation building.

Second, and most importantly, there has not been an open and thoughtful discussion about how best to communicate to the rest of the world American values, diversity, and the inherent messiness of democratic decision making, especially when it comes to foreign policy.

The third point is the most volatile. It is the quaint and irrational fear that a President will use the broadcasting entities to propagandize the American public. The fear is based on propagandists George Creel and Joseph Goebbels more than 60 years ago.

Nazi propagandist Goebbels is better known historically than Creel, but Creel’s work still influences the laws and policies surrounding American public diplomacy. Creel was a Progressive era muckraking journalist who became Wilson’s information minister during World War I. The Creel Commission created hundreds of thousands of posters and other communications maneuvers promoting the patriotism of fighting the war, and also the role of Wilson as America’s savior.

I’m the proud owner of a wonderful Creel poster depicting Wilson under a Bald Eagle and American flags. A portrait of Washington on Wilson’s right shoulder announces “Washington Gave Us Freedom,” and a portrait of Lincoln, on his Wilson’s left, says “Lincoln Kept Us United.” Under Wilson are the words, “Wilson Fights for America and all Humanity.” Below Wilson’s portrait, are portraits of America’s fighting men with the slogan, “America We Love You: The Brave Boys of 1918 Will Fight and Die for You.”

This was powerful stuff. Whatever you call it: propaganda, strategic communications, public diplomacy, it’s all the same: communications techniques and technologies aimed at influencing

public opinion and political decision making.

Fearful of another Goebbels and Creel after World War II, Congress passed the Smith-Mundt Act to organize VOA and other public diplomacy initiatives as long as they were not aimed at the American public.

Smith-Mundt has created an inherent conflict in American public diplomacy, and a political and bureaucratic contradiction. American public diplomacy is hobbled by these conflicts and contradictions today. If Congress sees American public diplomacy as propaganda not fit for Americans, how is the rest of the world expected to view and understand it?

The Smith-Mundt restrictions should be repealed. Let the public decide. Let the world see and hear America's open and democratic discussion.

The United States has three different missions regarding international broadcasting.

The first is to use broadcasting and other communications techniques to help explain and promote American foreign policy; America's commitment to democracy, human rights and economic opportunity; and – this is the hardest part – the diversity, complexity and inherent messiness of American political decision making.

The second mission is to support indigenous media reporting on democracy, human rights and transparency in countries that do not have a free press.

The third mission builds on the second, and that is support for the development of free, fair and self-sustaining free press in those same countries.

Presently, the BBG embraces all three missions. This is counterproductive. This first mission is public diplomacy. The second and third involve fostering international democratic institutions. These missions are complementary, but need to be separated.

The first mission of promoting and explaining American foreign policy is what the VOA has long been about. This the VOA should continue. And it should expand its work to involve Congress by serving, in part, as an international C-SPAN.

No independent bipartisan commission is needed to oversee the work of VOA. It belongs in the State Department, monitored in a bipartisan way through the Constitutional oversight powers of the Senate Foreign Relations Committee, and House International Relations Committee.

The second mission of supporting indigenous media reporting in countries without a free press has long been the work of RFE/RL,

and recently RFA and Radio/TV Marti. They should become truly independent non-profits, run by independent boards, and financed by Congress. Their jobs are to put themselves out of business over the long-term. In doing so, they should coordinate their efforts with the National Endowment for Democracy, which Senator Lugar last year convinced Congress to designate as the strategic coordinator for the development of free, fair and viable free press.

If we review the BBG's various entities in this light, questions arise about Al Hurra and Radio Sawa. If the goal is to develop free and independent media in the Arab-speaking world, then they too should have an independent board and receive Congressional funding based on a plan to eventually get off the government dime.

If the goal of Al Hurra and Radio Sawa is to serve as a platform for explaining and promoting American foreign policy, they should be merged back into VOA.

These are ideas I throw out to stimulate debate. Since 9/11 too much of the public diplomacy debate has been about tactics – buy advertisements, start a new TV station – and not about strategy. We need to reach a consensus on public diplomacy strategies before we get bogged down and waste more money on tactics that may or may not work.

1416. VOA to Outsource Work to Chinese

Newsgroup: rec.radio.shortwave

Voice of America to Outsource Work to Chinese

WASHINGTON, June 14 /PRNewswire/ -- Led by Sen. Paul Sarbanes (D-Md.), 14 prominent lawmakers on the Foreign Relations Committee and the State, Foreign Operations Appropriations Subcommittee have urged the Voice of America (VOA) not to contract out to China English-language news writing work that currently is performed by Americans.

Tim Shamble, president of the American Federation of Government Employees (AFGE) Local 1812, has led the fight against VOA's Chinese outsourcing plan. "As noted by the senators in their letter to VOA Director David S. Jackson, VOA must 'present the policies of the United States clearly and effectively' and 'represent America, not any single segment of American society' so that the agency 'can present a balanced and comprehensive projection of significant American thought and institutions,'" he said.

"It's almost impossible to imagine how VOA intends to accurately report on U.S. policies and issues with reporters living half way around the world. VOA management seems to have forgotten what the "A" in VOA stands for," said AFGE Legislative Representative John Threlkeld. "Additionally, it is unthinkable that VOA would try to do this with contractors who live under a totalitarian government and whose impressions of the United States may be based more on anti-American propaganda than real-life experience.

"This privatization plan is completely contrary to OMB Circular A-76, which requires public-private competition for work performed by federal employees before it is given to contractors, regardless of whether the adversely affected employees may be reassigned," Threlkeld added. "The only way VOA can go through with its Chinese privatization system is if the competition requirement is waived by OMB, which leads to the bigger picture. AFGE firmly believes that OMB's privatization system is nothing more than an attempt to replace hard-working federal employees who perform critical work for the American people with poorly-compensated contractors, even foreign contractors."

AFGE is the largest federal employee union, representing 600,000 workers in the federal government and the government of the District of Columbia.

That's because for the most part, the absolute truth is unknowable. Better
that an occasional guilty person get off than for a single innocent person
to lose liberty or life.

For a bunch of people who've been following the trial, you guys haven't
really been following the trial. (Maybe that's a good thing.)

He's had books of naked boys in his bedroom. They might not qualify as porn
for any of us, but perhaps they served that purpose for him.

Hello Brian,

Poor Andy - he's created a "monster!" He knew he had the best range of shortwave antennas ever created, but I don't think he ever intended for his business to grow so large. He hardly has time to sleep! (I haven't helped the poor guy get any rest; Il tell anyone and everyone I can about the fantastic merits of his antennae.)

His antennas are indeed hand-made to order and ARE WORTH EVERY PENNY you pay for them, exchange-rate notwithstanding.

There is just nothing else like them currently on the market.

The difference between the ALA 1530 and the ALA 330S (if you are unaware) is that the '1530 is more "broad-band;" in other words, it is sensitive well into the LW frequencies. The '330S is not. HOWEVER, the '330S is somewhat MORE sensitive on the higher frequencies (above, say, 12 MHz) and this is important if you do much daytime SW DXing.

Depending on quality of your radio's IF rejection, you could have some MW "ghosting" into the shortwave frequencies, especially the tropical bands, but even the 49-meter band, with the '1530. This does not occur with the '330S.

It all depends on your listening habits and the quality of your radio. For MW and/or LW DXers, the '1530 is best. For SW (mainly or only) DXers, the '330S is the way to go.

Consider mounting the antenna (especially the '1530) on a rotator. Both antennas are directional at lower (49-meters and below) frequencies and a rotator allows you to take full advantage of this characteristic.

I have my '330S mounted on an inexpensive Radio Shack rotator in my attic. Its performance there is unparalleled by any antenna I have used previously in well-over forty years of SW listening.

Best of Luck,

Joe

Portable SW radios can be pretty good..

- What kind of antenna do you have; I think that's really the most
important feature..

You can take a portable to remote, low noise areas
string out Huge antennas and pick up all sorts of stuff

Dan (R-75 & 100 feet of raandom wire)

Right now I'm using an AN-LP1 antenna. It works better than the whip, but
still doesn't do very well with distant stations.

I have used an NRD-545 for a few nights. A friend lent me his for a week when I was considering buying one a few months back. I thought it would be an advance on my Icom R-75. It was not a better DX'ing rig then the R-75 regardless of the DSP capabilities of the NRD-545. I found it to be tinny sounding and without question WAY over priced. I have never used the RX-350D. I have also used a Drake R8 and a Kenwood R-5000. Of the R8, R-5000, NRD-545 and the R-75, I have found the R-75 to be the best rig for DX-ing. I tend to do all of my DX'ing in ssb mode using ECSS tuning. The R-75 is King for this.

Still... Your antenna set up and your location is more important then your rig. If you live an a congested area with lots of noise sources, no rig is going to be very effective. Also... If you dont have a good antenna set up, your rig wont matter either.

For hard core DX'ing the best rig I can recommend under $2,000.00 is the R-75. A new one is under $600.00. Your best bet for an antenna would depend on your circumstances. Can you put something up outside ??? If so, how much of an area do you have to work with ???

Wannabe:

Well, you can read and compare the specs... one thing you'll notice is the winradio goes to 180 Mhz with the extended version I have--it is great...

I have never sat it right beside an old table top and compared--with same antennas...

It works well is all I can claim... I got mine off ebay... I paid under $200.00 with shipping included--but just looked and can't find any there right now...

John

I could put up something in my backyard. It's about 50 meters wide by 40
meters deep. What sort of antenna did you have in mind?

A dipole like this would be a good bet....

http://www.universal-radio.com/catalog/sw_ant/3377.html

Or, you could set up multiple antennas. Perhaps an east-west long wire and
a north-south long wire that you could switch between. Having multiple
antennas is always a plus for DX'ing

A loop would also be a good bet.

The possibilities are endless !!!

Michael

Yeah, I kind of get the impression that this guy is over-worked, but I think he's really created a niche. I'm going to order the 1530 probably tomorrow or Friday. I'm interested in mw as well as sw dx, but mostly below 25 meters, and I don't really do much listening until late after-noon, so I suppose the 1530 should suit me fine. There are three mw stations in my town, but they're all 1kw, so hopefully ghosting will not be much of an issue. My receiver is an Icom R75; not really sure of its if rejection capabilities though. I'm mostly hoping that the antenna will reject a majority of the noise that I have here from powerlines mostly, but also routers, monitors, thermostat, etc. Well, I'll post comments when it arrives. Wish me luck. 73
